CALIFORNIA 3 INCIDENT MANAGEMENT TEAM

SOBERANES FIRE

PNKG7Z
CA-BEU-003422

OPERATIONAL PERIOD

WEDNESDAY AUGUST 24th 0700
to
THURSDAY AUGUST 25TH 0700

INCIDENT OBJECTIVES (ICS 202)

SOBRANES	**2. Operational Period:** Date From: 8/24/16 Time From: 0700	Date To: 8/25/16 Time To: 0700

Incident Strategy

The suppression strategy for the Soberanes Fire is full suppression with direct and indirect attack methods within the Life First Doctrinal Guidelines and Chief's Intent for 2016. To the extent possible, utilize existing or historic firelines for control purposes to minimize resource effects on wilderness. Provide for structure and community protection. A key element of the plan is flexibility and the ability to apply the right resource, to the right task, at the right time, for the right duration. It is understood fireline will be constructed only where it is feasible and safe to do so.

Leader's Expectations

- Provide the highest level of customer services to all involved with or impacted by the Soberanes Fire. All incident assigned personnel should be prepared to take the appropriate actions regarding:
  - Personal interactions both internal and external to the incident management organization
  - Personal safety and the safety of others
  - An incident-within-an-incident

Management Objectives:

- Provide for and maintain public and first responder safety by utilizing the incident safety analysis process.
- Protect all critical assets at risk to include the redwoods, historical assets, infrastructure and improvements, watersheds, and transmission lines.
- Utilize tactics that promote the protection of sensitive natural and cultural resources in the Ventana Wilderness.
- It is the Unified Incident Commanders' Leaders Intent to ensure collaboration at all levels of the incident.
- Be financially responsible for all management and fire suppression tactics.
- Foster and enhance community and political relationships.
- All management actions and efforts will be focused on serving, safeguarding, and protecting the citizens and natural resources of Monterey County.

Control Objectives:

- Keep the fire inside the current perimeter in the Carmel Zone to protect infrastructure in the adjacent communities.
- Keep the fire north of the Nacimiento-Ferguson Road. to limit fire growth to the south at the point of greatest opportunity.
- Keep the fire west of Carmel Valley and Reliz Canyon to avoid impacts to the communities along the Highway 101 corridor and Fort Hunter Liggett Military Reservation.
- Keep the fire east of Highway 1 to protect the visual corridor of this National Scenic Byway.

Soberanes Fire Weather Forecast

FORECAST NO: 32

NAME OF FIRE: Soberanes

PREDICTION FOR: 0700 Wed - 0700 Thu

UNIT: CA-BEU/LPF

SHIFT DATE: 8/24-8/25

SIGNED:

TIME AND DATE FORECAST ISSUED: 2000 8/23/16

Incident Meteorologist- Ryan Walbrun

WEATHER DISCUSSION: Marine layer will compress to around 1500 feet today as high pressure peaks over the region. Overall trend for temperatures and humidity will be slightly warmer and drier. The ridge winds will remain from the Northwest again today which will push any smoke towards the interior divisions of the Seco Zone and away from the line in the Sur Zone where winds will be more westerly in the afternoon hours. In addition the northwest winds off the ocean will keep the air cleaner over the Carmel Zone with no smoke impacts from other fires in the state. Smoke may linger a little longer in the morning over the Hill helibase. Main concern for operations tonight will be poor humidity recovery above the marine layer with readings dropping into the teens above 2000 feet during the overnight hours.

WEATHER FORECAST FOR WEDNESDAY:

WEATHER: Morning fog, drizzle and clouds until about 9-10 am below 1500 feet otherwise clear with smoke.

TEMPERATURES: 86-97 interior/ridges…78-85 lower slopes… 69-75 along Hwy 1. **24 HR Trend** (up 1 to 2)

HUMIDITY: Coast 50-60%...above 1800 ft / interior 12-22%. **24 HR Trend** (down 1 to 5%)

20 FT WINDS:

RIDGETOP - *Sur Zone* – Light winds becoming West-Northwest during the afternoon at 5-10 mph. Gusts to 15 mph above Hwy 1. *Seco Zone* - East-Northeast 2-4 mph in the morning becoming West to Northwest 4-8 with gusts 10-12 mph in the afternoon.

SLOPE/VALLEY - Downslope/downcanyon 2-4 mph in the morning becoming upcanyon/upslope 4-8 mph with gusts 12 mph.

Marine Layer: Around 1500-1800 feet.

WEATHER FORECAST FOR WEDNESDAY NIGHT:

WEATHER: Becoming mostly cloudy coast and Carmel Zone below 1500 feet. Areas of fog and drizzle late. Clear with smoke over interior portions of the fire.

TEMPERATURES: 69-77 above 2000 feet. 54-61 in the marine layer.

HUMIDITY: Full recovery below 1500 feet 80-100%...15-30% above 1800 feet locally 10% after midnight.

20 FT WINDS:

RIDGETOP – *Sur Zone* – West-Northwest 5-10 mph gusts 15 mph early becoming 3-6 mph overnight.
Seco Zone- West-Northwest 4-8 with gusts 10 mph early becoming 2-4 mph overnight.

SLOPE/VALLEY – Evening upcanyon 4-7 mph…becoming downcanyon 1-4 mph overnight.

Marine Layer: Around 1500 feet deepening to 2000 feet by morning.

Extended Forecast: A weak upper trough will move down the coast by Thursday. This will deepen the marine layer slightly to around 2200-2500 feet along with a slight cooling trend. Winds will remain westerly but generally light at 5-10 mph with gusts to 15 mph. Humidity recovery will be better at night around 25-40% with daytime readings 15-25%.

INPUTS

WEATHER SUMMARY **Hot and Dry**

Temps: Highs 88-98 interior and mid 60s to 70s along the coast Lows mid 50's
RH: Above 1900' 8-18% coast 50-60% Night: Poor recovery above 1900', 80-90% below 1900'
Winds: Ridges WNW 6-12mph Gusts 18mph. Interior slope winds upslope 3-8mph day and Downslope 2-4mph at night

ERC 86-97th% **BI 161** **Pig 90%** **Rates of spread head fire in brush 60-80cph** **Spotting out to 1/2mile**

OUTPUTS

FIRE BEHAVIOR

GENERAL

Expect the fire to become more active today with the warmer and dryer weather. The fire will continue moving to the south mainly as backing and flanking fire. There will be some interior head fire runs in aligned drainages but none of these runs will impact existing containment lines. No active fire behavior is expected below the marine layer. Poor overnight RH recoveries (less than 25%) will continue and the fire will remain active at night. With over a week of little to no recoveries overnight all classes of fuels are critically dry. Heavier fuels at the bottom of moist drainages will slow the progression of the fire into and across creeks. When the fire does cross a drainage expect short, rapid, intense uphill runs. The fire is burning primarily in a mix of brush and an oak understory. Snags, skeleton brush and heavy downed fuels are abundant and will increase the fire line intensity. Aspect is playing an active role in fire behavior. We are seeing more intense and complete consumption of fuels on the South and Western aspects. North and East aspects are burning as a mosaic and thus have potential for reburn.

SPECIFIC

Carmel Zone BRANCH I, II, IX

No forward fire progression is expected. Interior pockets of heavier fuels will continue to burn out.

Seco Zone BRANCH III, IV, V

Flanking fire will continue along north to south in aligned drainages and will back off of Miller Peak. The fire has the potential to become established in Pine Valley. Fire will continue to slowly progress towards LP Reservoir from Buckskin Flat Camp. Rollout in this steep terrain will result in uphill runs back into the main fire. 10 -20' flame lengths in brush fuels should be expected when winds and fuel align with topography.

The fire is not expected to impact containment lines during this forecast period.

Sur Zone Branch VII, VIII

DIV O/P – In patrol status. No forward fire progression expected.

DIV N – Fire progression is not expected to challenge control lines. Interior islands will continue to burn out. Monitor for rollout and re-burn potential.

DIV ZZ – The fire has backed away from logwood ridge and is well established in the confluence of South Fork and North Fork of Big Sur river drainage. The fire will continue to flank around Olmstead Mountain, back into the South Fork and make short uphill runs back toward Logwood ridge. Once established on the south side of the South Fork uphill runs will take the fire further to the interior. Expect upper level winds to keep any smoke from the Chimney fire from reaching our fire area. Un-shaded fuels and warmer daytime temps will increase fire behavior.

AIR OPERATIONS

Expect the smoke and marine layer to lift by mid to late morning.

SAFETY

The fire is in an old burn scar and snags are abundant, look up to live!
Incomplete burns means there is a high potential for reburn.

Driving to and from incidents is a ***HAZARDOUS TASK***- insure the drivers are alert and focus on performing the task safely.

Pull over to use cell phone / radio. Always expect another vehicle around the next curve. Drive slowly and be defensive & courteous (smile and wave).

Don't let boredom lead to complacency. There is still lots of work to get accomplished and lots of hazards to be heads up for. Remain focused on the task at hand and alert at all times for changing weather conditions and fire behavior.

Hotter and Drier. Weather predicted to become hotter and drier in the coming days. Be alert for increase fire behavior. Increase your hydration in anticipation of the warmer weather. Dehydration is cumulative, don't delay in filling-up early!

You pay the most for Safety when you try to do without it. Accidents hurt, safety doesn't. Safety pays dividends by providing health at no cost.

6. Control Operations/Work Assignments:

Mop-up, hold, and secure fireline.
Seek opportunities to enhance the check line at Cold Springs.
Be prepared to take defensive measures for any threat to the line.

Establish communications with spiked resources in UU.

7. Special Instructions:

Please keep all Dozer lines out of Highway 1 viewshed.
LOOK UP, be aware of hazard trees.
Fire Plans: Ensure all line personnel in the division are notified and that the GO No GO checklist is utilized.
The Communications Plan is complex. Please review the ICS 205 with all Division personnel.
DIVS, TFLD, and HEQB must account for & certify all hired equipment shift tickets during the operational period.
Please follow medical plan for medical emergencies. H-407 is available for night hoist operations.
Division Supervisors: Please report to Fire Apportionment to validate the previous day's ICS-204s.
At 0001 hrs. all Divisions will contact DIVS N/O/P Murrin for any Branch needs.

Prepared By (Communications Unit)
Kevin Harper/Clay Flad(COML)

Incident Location
5 MILES SOUTH OF CARMEL, GARRAPATA STATE PARK, MONTEREY CALIFORNIA

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

Special Medical Emergency Procedures For Fire Line and Camps:

In-Camp Care	Fire Line Emergencies
Minor Injuries or Illnesses	**Announce "Medical Emergency" on Command Channel.**
• Seek Aid directly at the ICP Medical Unit	• **Identify on Scene Command**
• Unit Open 0600 hrs to 2200 hrs	• **Notify Division Supervisor**
Moderate to Severe Injuries or Illnesses	• **Give your unit name and advise what EMTs are on scene.**
• Contact Communications or Med Unit directly	• **Give your location and if possible Lat/ Log**
Med Unit staffed after hours for Emergencies	• **Give the nature of the medical problem**
Workers Comp @ ICP Medical Reporting & Prescription	• **Give Number of Injured and Severity**
Refills 0900 hrs to 2000 hrs	• **Request line Medic Response.**
MEDL Available by phone Mike Hazlett (916) 591-8802	• **Move the tactical operations to CALCORD Ch 15**
MEDL will be available on Logistics Net	**Request type of evacuation resources needed:**
	• **Ground Support, Ambulance or REM**
Emergency Pre-planning	**Air Evacuations information needed:**
Start of shift: Notify your DIVS of EMT's and equipment	• **Lat / Long, Ground Contact, Describe the terrain, elevation, and temperature**
you have available for response, if needed.

ICS 206 IAP Page_____ Date/Time August 23, 2016 19:50 hrs

Bee stings are the most often trigger allergies. However, most people are not allergic to stings and may mistake a normal sting reaction for an allergic reaction. By knowing the difference, you can prevent unnecessary worry and higher medical attention.

Some bees communicate via pheromone:

The **second stage** of the ALARM pheromone comes from the **sting gland**.
This chemical messenger is released after the stinger has penetrated the skin of the intruder. It is not released until the sting, and is much stronger than the scent given off by the mandibular gland.

After the sting takes place, and the stinger (with poison sac and all) is ripped out of the abdomen of the bee, the alarm scent is at its strongest. In which the bees would continue to sting. **You must wash this area off!!!!**

The severity of a sting reaction varies from person to person. There are three types of reactions -- normal, localized, and allergic:

- A normal reaction will result in pain, swelling, and redness around the sting site.
- A large local reaction will result in swelling that extends beyond the sting site. For example, a person stung on the ankle may have swelling of the entire leg. While it often looks alarming, it is generally no more serious than a normal reaction.
- The most serious reaction to an insect sting is an allergic one (described below). This condition requires immediate medical attention.

Symptoms of a severe sting allergy (called an anaphylactic reaction) may include one or more of the following:

- Difficulty breathing
- Hives that appear as a red, itchy rash and spread to areas beyond the sting
- Swelling of the face, throat, or mouth tissue
- Wheezing or difficulty swallowing
- Restlessness and anxiety
- Rapid pulse
- Dizziness or a sharp drop in blood pressure

Be PREPAIRED!!!

1. Know where bees are in the area you are working
2. Know who is allergic to bees and be prepared by having EPI pen or Benadryl readily available

Human Resource Message
August 24, 2016

Key assumptions about people:

1. People do what makes sense to them.
2. No one really wants to fail.
3. Everyone wants to grow personally.
4. Everyone needs and responds to encouragement.
5. All have the need for security, esteem and self-actualization.

"If one advances confidently in the direction of his dreams, and endeavors to live the life which he has imagined, he will meet with a success unexpected in common hours.
-Henry David Thoreau-

"We have an unknown distance yet to run, an unknown river to explore. Let's not let go of the adventure that is life. Don't run it so fast you forget to enjoy it. What unknown river of life will you explore today?" -John Wesley Powell-

"There are two ways one can look at life. Either as nothing is a miracle or as everything is a miracle.- Albert Einstein-

"Kindness is a language the deaf can hear and the blind can see"-Mark Twain-
