Incident Action Plan
Lodgepole Incident

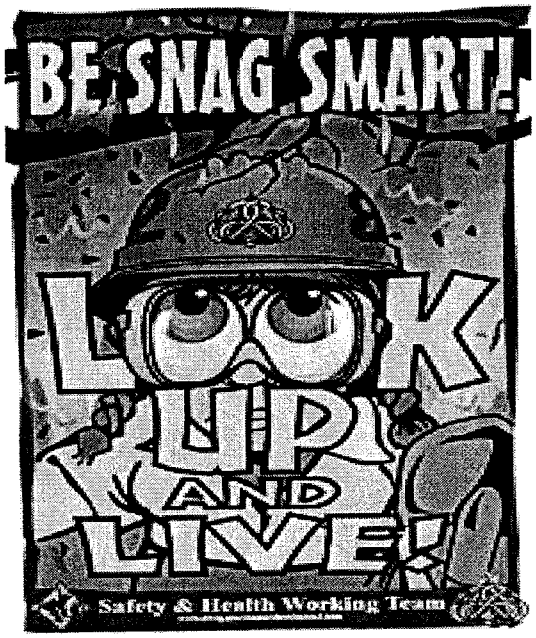
ID-SCF-013165, P4HRT7 (0413)

DAY SHIFT 0600-2000
Thursday 7/25/2013
NIGHT SHIFT 1800-0800
Thursday 7/25/13 & Friday 7/26/13

HAZARD TREE SAFETY

Hazard Tree Indicators:

- **Trees that have burned**
- **Shallow tree root systems**
- **Dead & broken top trees**
- **Leaning or hung up trees**



John Haugh, Bob Lattin, Fred Johnson – Safety Team

GPS FORMAT DATUM NAD83
DD.MM.MMM (Degrees, Minutes, Decimal Minutes)

INCIDENT OBJECTIVES	1. INCIDENT NAME	2. DATE PREPARED	3. TIME PREPARED
	LODGEPOLE	7/24/2013	2000

4. OPERATIONAL PERIOD (DATE/TIME)

7/25-26/2013 Day (0600-2000) & Night (1800-0800)

5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT

**** Incorporate sound risk management principals during decision processes.**

**** Utilize direct and indirect suppression tactics to contain fire east of the headwaters of Challis Creek, north of the Custer Motorway, southeast of Bear Creek and west of the Forest/BLM boundary.**

**** Identify and execute the options that balance safety with the highest probability of success to reduce risk of fire spreading to private land, agency infrastructure, & historic structures.**

**** Restrict fire, to the extent possible, within sage brush habitat.**

**** Ensure timely and accurate information is distributed to interested parties.**

Incident Action Plan Weather Forecast

FORECAST NO: 1
PREDICTION FOR: Day/Night **SHIFT**
SHIFT DATE: 7/25/2013

TIME AND DATE
FORECAST ISSUED: 1900 07/24/13

NAME OF FIRE: Lodgepole
UNIT: USFS Salmon/Challis NF
SIGNED: Patrick Gilchrist

Incident Meteorologist

Upper ridging will dominate into Friday, making for continued hot and dry conditions. Limited monsoonal moisture entering the region will help raise humidity slightly...and increase potential for dry thunderstorms today into Friday. Competing flows between the upslope winds and the general northwest winds could make for periods of erratic wind directions this afternoon.

Forecast for Thursday July 25, 2013:

WEATHER:	Partly cloudy with areas of smoke. A chance of dry thunderstorms in the afternoon.
TEMPERATURES:	Maximum 80-85 bottom...70-75 top.
HUMIDITY:	Minimum 12-17% bottom...15-20% top.
WIND (20 foot):	Ridges...west-northwest 8-12 mph with gusts to 15 mph. Valleys....downslope/downvalley/downcanyon 4-8 mph through 1000...then upslope/upvalley/upcanyon 5-10 mph. **GUSTY ERRATIC WINDS TO 40 MPH WITH THUNDERSTORMS**
Chance of Wetting Rain:	10 percent.
Lightning Activity Level:	1 until 1300...then 3.
Inversion/Haines Index:	Moderate inversion dissipating around 1100. Haines Index 6 high.

Forecast for Thursday Night July 25-26, 2013:

WEATHER:	Partly cloudy with areas of smoke. A chance of dry thunderstorms in the evening.
TEMPERATURES:	Minimum 53-58 bottom 58-63 midslope to ridgetop.
HUMIDITY:	Maximum 35-40% bottom...29-34% ridges.
WIND (20 foot):	Ridges...northwest at 8-12 mph...going westerly late. Valleys...becoming downslope/downvalley/downcanyon 4-8 with gusts to 12 mph by 2100. **GUSTY ERRATIC WINDS TO 40 MPH WITH THUNDERSTORMS**
Chance of Wetting Rain:	10 percent.
Lightning Activity Level:	3 until 2100..then 1.
Inversion/Haines Index:	Moderate inversion forming by 2100. Haines Index 5 moderate.

Forecast for Friday July 26, 2013:

WEATHER:	Partly cloudy with areas of smoke. A slight chance of mainly dry thunderstorms in the afternoon and evening.
TEMPERATURES:	Maximum 82-87 bottom...72-77 top.
HUMIDITY:	Minimum 10-15% bottom...15-20% top.
WIND (20 foot):	Ridges...west-northwest 10-15 mph with gusts to 18 mph. Valleys....downslope/downvalley/downcanyon 4-8 mph through 0900...then upslope/upvalley/upcanyon 5-10 mph with gusts to 12 mph.
Chance of Wetting Rain:	10 percent.
Lightning Activity Level:	1 until 1300...then 2.
Inversion/Haines Index:	Moderate inversion dissipating around 1100. Haines Index 5 moderate.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER 4	**TYPE OF INCIDENT:** Wildland Fire
INCIDENT NAME: Lodgepole	**OPERATIONAL PERIOD** Day & night, 7/25/13
DATE ISSUED: 24 July 2013	**TIME ISSUED:** 1900
UNIT: Salmon-Challis NF	**SIGNED** Ken Loda, FBAN

INPUTS

WEATHER SUMMARY See the preceding Fire Weather Forecast.

FUELS CONDITIONS Fuel moisture: One-hour fuel moisture can be expected to be about 6% at 0700. That will drop to about 2% from about 1200 to 1700. The 10-hour fuels are at 4%, and 100-hour fuels are about 5%, and the1000 hour about 10%. After 2000 the fuel moistures will slowly add 5% through the night. Live fuel moisture: The live fuel moisture is around 117 – 160% in conifers, about 110% in the shrubs. However, this varies with aspect and setting.

OUTPUTS

GENERAL FIRE BEHAVIOR The 100- and 1000-hours fuels are little influenced by changes in relative humidity, and in their present condition will burn to some extent through the night. When winds, particularly gusts, align with slopes expect overall behavior to be extreme. General atmospheric instability (Haines index) is a good predictor of potential for large fire growth, and today's Haines index is 6 – high.

Day Shift:

Fuel Model	ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
	Head (Mid/Max)	Backing	Head(Mid/Max)	Backing		
High Load Dry Climate Shrub understory	10/13	1	8/9	3	100%	.2-.3 mile
Grass/Brush	24/29	1	6/6	2	100%	.2 mile

Fire behavior predictions are for the hottest and driest period of the day with mid-range and maximum winds.

Night Shift:

Fuel Model	ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
	Head (Mid/Max)	Backing	Head(Mid/Max)	Backing		
High Load Dry Climate Shrub understory	7/9	1	6/7	1	40%	.2 mile
Grass/Brush	14/20	1	4/5	1	40%	.1 mile

Thunderstorm related conditions:

Fuel Model	ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
	Head	Backing	Head	Backing		
High Load Dry Climate Shrub understory	30	1	14	3	100%	.7mile
Grass/Brush	92	1	10	2	100%	.5 mile

SPECIFIC FIRE BEHAVIOR

Spotting: Torching and spotting is likely, even in the general winds. Rollout.is also likely from the steeper slopes.

Crown fire potential: Short crown runs are possible, particularly when the slope aligns with winds, or in thunderstorm related gusts. Rates of spread of a crown fire would be up to 157 chains per hour in the gusts.

SAFETY

SAFETY Be watchful for thunderstorm development. Gusty winds can often develop before the thunderstorm is fully formed.

AIR OPERATIONS Smoke my inhibit effective air operations in the morning.

DIVISION ASSIGNMENT LIST

DIVISION ASSIGNMENT LIST	**1. Branch**	**2. Division/Group** A
3. Incident Name Lodgepole	**4. Operational Period** Date: July 25, 2013 Time: 0600-2000	

5. Operations Personnel

Operations Chief – Field	**Dave LaChapelle / Sam Hicks (T)**	Division Supervisor	**Chris Glode**
Operations Chief – Planning	**Rich Stiles / Scott Sugg (T)**	Air Attack Group Supervisor	**Kurt Atkins / Cliff Claridge**

Incident Location Idaho
County State ID Latitude N Longitude W

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

8. Medical Emergency Procedures

- Declare the nature of the emergency. Medical injury/illness (is it life threatening?)
- If Life threatening (**Medevac**), then request the frequency be cleared for emergency traffic.
- Identify the on-scene point of contact (POC) by Resource and Last name (i.e. POC is TFLD Smith)
- Identify nature of incident, # injured, patient assessment(s), and location (geographic and GPS coordinates
- Identify on-scene personnel by position and name (i.e. EMT Jones)
- Identify preferred method of patient transport
- Request any additional resources and/or equipment needed
- Document all information received and transmitted on radio or phone
- Identify any changes in the on-scene point of contact or medical personnel as they occur

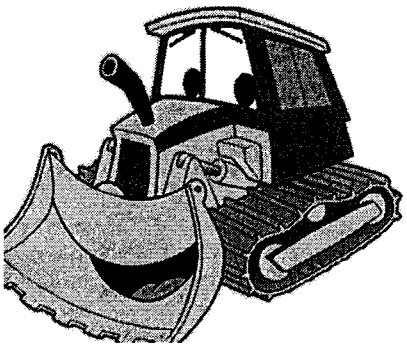
Resource Advisor's Message – July 25, 2013

It's Never Too Early to Think About Suppression Repair!

Mechanical Fireline



- Use waterbars on slopes greater than 10 percent. Waterbars should be constructed to direct water away from the fire line, by angling waterbars 30° to 45° to the fire line. A waterbar height of 18 inches is generally adequate. The waterbar is more durable if the soil mound is packed with the dozer track or excavator bucket; however, this may not be possible in "powder" dry soil conditions. Most importantly, waterbars should be located where they will function effectively. The outlet end of the waterbar needs to be open and of adequate length to allow free flow of water away from the dozer line. The spacing of waterbars may be modified when used in combination with other erosion mitigation such as slash and log placement.

Table 1. Fireline slope and waterbar spacing

Fireline Slope (%)	6-10	10-20	20-30	30-40	40-50	50-60	60+
Waterbar Spacing (feet)	200	160	110	80	60	45	30

- All dozer line cuts and fills will be pulled back to the natural contour. All berms, dozer piles, and windrows should be broken up and pulled back onto and adjacent to the line. Slash, snags, and downed trees will be placed on the line to prevent erosion, provide micro-sites for revegetation, and prevent motorized intrusion.
- Completely obliterate at least the first 200 feet of the fireline that ties into an existing trail or road using placement of large diameter slash and/or rocks, construction of soil berms, or re-contouring. When rocks or slash are used, some of the material should be large enough in size such that it cannot be moved by hand. In sage-steppe areas where slash is not available, the first 100 to 200 feet of the fireline may be mechanically closed with heavy equipment. This will deter "re-opening" of the fireline and use of it as a vehicle access point by the public. To assure there will be no vehicle use, the line should be blocked for a distance beyond the access point. The distance will be determined by the READ.
- To facilitate reestablishment of native vegetation, redistribute topsoil and slash over dozer lines and constructed safety zones. Slash generated during line construction and/or safety zone construction will be scattered onto dozer line or disturbed areas. The effectiveness of slash as an erosion control is greatest when it is contact with the soil. In timbered areas, lopping and/or trampling the slash can best achieve this.
- Any disturbed streambanks should be reconstructed to natural bank-full height and armored with rock and/or log structures, transplanted vegetation "plugs", etc.
- Approaches to stream crossing should be treated with slash and organic litter to achieve a minimum 80% ground cover. The actual distance will be prescribed by the READ, but will generally range from 100 to 200 feet each side of the crossing, depending on site conditions
- Pick up all flagging, litter, and trash and pack out for proper disposal.

Training Message
July 25, 2013
Lodgepole Fire
Challis, Idaho

ALL TRAINEES AND EVALUATORS – federal, state, county, city, casual hires, contractors, EVERYONE are encouraged to visit with your Training Specialist as you begin your assignment and definitely before you check out so we can ensure your hard work and dedication are recognized through the evaluation process.

Your exit interviews and performance evaluations will be included in your final training package upon going through the demobilization process before your actual departure.

Thanks for your participation in making our wildland fire world the best it can be.

Linda A. Guy
Training Specialist
