Incident Action Plan
Lodgepole Incident

ID-SCF-013165, P4HRT7 (0413)

DAY SHIFT 0600-2000
Friday 7/26/2013
NIGHT SHIFT 1800-0800
Friday 7/26/13 & Saturday 7/27/13

LCES

A popular mountaineering test divides the alpinists' hazards into two distinct types: subjective, which one has direct control over (e.g., condition of the equipment, the decision to turn back) and objective hazards which are inherent to the alpine environment (e.g., avalanches, rock fall).
Objective hazards are a natural part of the environment. They cannot be eliminated and either one must not go into the environment where they exist or adhere to a procedure where safety from the hazard is assured.

Similarly, the wildland firefighter's hazards are either subjective or objective. Examples of subjective hazards would be working below a dozer constructing fireline or the use of improper techniques while felling a tree. The fireline supervisor has direct control over these types of hazards.

The wildland fire environment has four basic objectives hazards; lightning, fire-weakened timber (standing and lying), rolling rocks and entrapment by running fires. ***When these hazards exist the options are to not enter the environment or to adhere to a safe procedure.*** The key to this safe procedure is LCES.

LCES: Lookouts, Communications, Escape Routes, Safety Zones

Please refer to page 6 of your IRPG.

Safety Team: John Haugh, Bob Lattin, Fred Johnson, Reid Hildreth, Cary Brown, Will Worley, Dave Provencio & John Langstaff

GPS FORMAT DATUM NAD83

INCIDENT OBJECTIVES	1. INCIDENT NAME	2. DATE PREPARED	3. TIME PREPARED
	LODGEPOLE	7/25/2013	2000

4. OPERATIONAL PERIOD (DATE/TIME)

7/26-27/2013 Day (0600-2000) & Night (1800-0800)

5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT

** Incorporate sound risk management principals during decision processes.

** Utilize direct and indirect suppression tactics to contain fire east of the headwaters of Challis Creek, north of the Custer Motorway, southeast of Bear Creek and west of the Forest/BLM boundary.

** Identify and execute the options that balance safety with the highest probability of success to reduce risk of fire spreading to private land, agency infrastructure, & historic structures.

** Restrict fire, to the extent possible, within sage brush habitat.

** Ensure timely and accurate information is distributed to interested parties.

Incident Action Plan Weather Forecast

FORECAST NO: 2
PREDICTION FOR: Day/Night **SHIFT**
SHIFT DATE: 7/26/2013

NAME OF FIRE: Lodgepole
UNIT: USFS Salmon/Challis NF
SIGNED: Patrick Gilchrist

TIME AND DATE FORECAST ISSUED: 1900 07/25/13

Incident Meteorologist

*****FIRE WEATHER WATCH IN EFFECT ON THE LODGEPOLE FIRE FOR LOW HUMIDITY, GUSTY WINDS, AND THE POTENTIAL FOR MAINLY DRY THUNDERSTORMS ON SATURDAY AFTERNOON*****

Lingering monsoonal moisture in the mid levels will keep the threat for isolated mainly dry thunderstorms around this afternoon and overnight. Temperatures will trend slightly upward ahead of a pacific trough building in to the Pacific Northwest. We could again see battling wind directions between the upslope flow and the ridgetop west-northwest winds during the afternoon. The upper ridge will begin to be pushed down on Saturday by the approaching upper trough, increasing winds out of the west-southwest ahead of a weak cold front due in sometime Saturday evening.

Forecast for Friday July 26, 2013:

WEATHER:	Partly cloudy with areas of smoke. A slight chance of mainly dry thunderstorms in the afternoon.
TEMPERATURES:	Maximum 82-87 bottom…72-77 top.
HUMIDITY:	Minimum 12-17% bottom…17-22% top.
WIND (20 foot):	Ridges…west-northwest 12-17 mph with gusts to 25 mph. Valleys….downslope/downvalley/downcanyon 4-8 mph through 0900…then upslope/upvalley/upcanyon 5-10 mph with gusts to 12 mph. **GUSTY ERRATIC WINDS TO 40 MPH WITH THUNDERSTORMS**
Chance of Wetting Rain:	10 percent.
Lightning Activity Level:	1 until 1300…then 2.
Inversion/Haines Index:	Moderate inversion dissipating around 1100. Haines Index 5 moderate.

Forecast for Friday Night July 26-27, 2013:

WEATHER:	Partly cloudy with areas of smoke. A slight chance of mainly dry thunderstorms overnight.
TEMPERATURES:	Minimum 53-58 bottom 58-63 midslope to ridgetop.
HUMIDITY:	Maximum 35-40% bottom…28-33% ridges.
WIND (20 foot):	Ridges…west at 10-15 mph with gusts to 20 mph. Valleys…becoming downslope/downvalley/downcanyon 4-8 with gusts to 12 mph by 2100. **GUSTY ERRATIC WINDS TO 40 MPH WITH THUNDERSTORMS**
Chance of Wetting Rain:	10 percent.
Lightning Activity Level:	2.
Inversion/Haines Index:	Weak to moderate inversion forming by 2100. Haines Index 5 moderate.

Forecast for Saturday July 27, 2013:

WEATHER:	Partly cloudy with areas of smoke. A slight chance of mainly dry thunderstorms in the morning…then a chance of mainly dry thunderstorms in the afternoon and evening.
TEMPERATURES:	Maximum 79-84 bottom…69-74 top.
HUMIDITY:	Minimum 15-20% bottom…20-25% top.
WIND (20 foot):	Ridges…west-southwest 15-20 mph with gusts to 28 mph. Valleys….downslope/downvalley/downcanyon 4-8 mph through 0900…then upslope/upvalley/upcanyon 5-10 mph with gusts to 12 mph…becoming west-southwest (downcanyon)13-18 mph during the afternoon.
Chance of Wetting Rain:	15 percent.
Lightning Activity Level:	2 until 1300…then 3.
Inversion/Haines Index:	Weak to moderate inversion dissipating around 1100. Haines Index 6 high.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER 5	**TYPE OF INCIDENT:** Wildland Fire
INCIDENT NAME: Lodgepole	**OPERATIONAL PERIOD** Day & night, 7/26/13
DATE ISSUED: 25 July 2013	**TIME ISSUED:** 1900
UNIT: Salmon-Challis NF	**SIGNED** Ken Loda, FBAN

INPUTS

WEATHER SUMMARY See the preceding Fire Weather Forecast.

FUELS CONDITIONS Fuel moisture: One-hour fuel moisture can be expected to be about 7% at 0700. That will drop to about 2% from about 1200 to 1700. The 10-hour fuels are at 4%, and 100-hour fuels are about 5%, and the1000 hour about 9%. After 2000 the fuel moistures will slowly add 4% through the night. Live fuel moisture: The live fuel moisture is around 117 – 160% in conifers, about 110% in the shrubs. However, this varies with aspect and setting.

OUTPUTS

GENERAL FIRE BEHAVIOR The heavier fuels (100- and 1000-hours) are little influenced by changes in relative humidity, and in their present condition will burn to some extent through the night. When winds, particularly gusts, align with slopes expect overall behavior to be extreme. General atmospheric instability (Haines index) is an indicator of potential for large fire growth, and today's Haines index is 5 – moderate.

Day Shift:

Fuel Model	ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
	Head (Mid/Max)	Backing	Head(Mid/Max)	Backing		
High Load Dry Climate Shrub understory	11/20	1	9/11	3	100%	.2-.4 mile
Grass/Brush	26/39	1	5/7	2	100%	.2 mile

Fire behavior predictions are for the hottest and driest period of the day with mid-range and maximum winds.

Night Shift:

Fuel Model	ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
	Head (Mid/Max)	Backing	Head(Mid/Max)	Backing		
High Load Dry Climate Shrub understory	9/13	1	7/9	1	50%	.2-.3 mile
Grass/Brush	21/34	1	5/6	1	50%	.1 mile

Thunderstorm related conditions:

Fuel Model	ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
	Head	Backing	Head	Backing		
High Load Dry Climate Shrub understory	30	1	14	3	100%	.7mile
Grass/Brush	70	1	9	2	100%	.4 mile

SPECIFIC FIRE BEHAVIOR

Spotting: Torching and spotting is likely, even in the general winds. Rollout.is also likely from the steeper slopes.

Crown fire potential: Short crown runs are possible, particularly when the slope aligns with winds, or in thunderstorm related gusts. Rates of spread of a crown fire would be up to 157 chains per hour in the gusts.

SAFETY

SAFETY Be watchful for thunderstorm development. Gusty winds can often develop before the thunderstorm is fully formed.

AIR OPERATIONS Smoke my inhibit effective air operations in the morning.

IRAWS talk! Rx/Tx 163.350. While transmitting, key in 0008 for Challis Ck; 0009 for Jeff's Flat; 0034 for Twin Peaks.

Incident Location Idaho
County State ID Latitude N Longitude W

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

8. Medical Emergency Procedures

- Declare the nature of the emergency. Medical injury/illness (is it life threatening?)
- If Life threatening (**Medevac**), then request the frequency be cleared for emergency traffic.
- Identify the on-scene point of contact (POC) by Resource and Last name (i.e. POC is TFLD Smith)
- Identify nature of incident, # injured, patient assessment(s), and location (geographic and GPS coordinates
- Identify on-scene personnel by position and name (i.e. EMT Jones)
- Identify preferred method of patient transport
- Request any additional resources and/or equipment needed
- Document all information received and transmitted on radio or phone
- Identify any changes in the on-scene point of contact or medical personnel as they occur

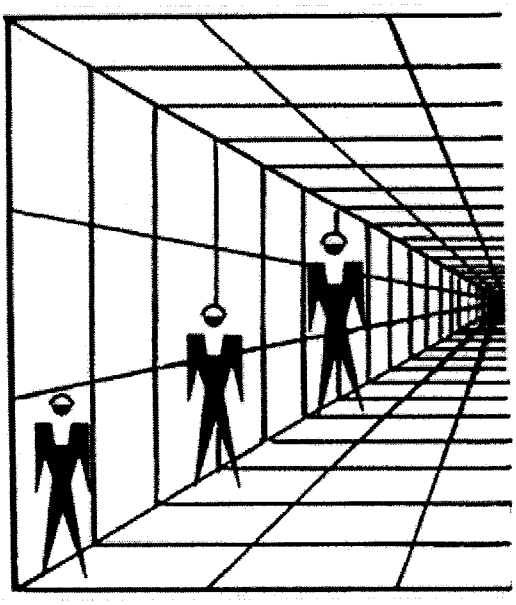
Human Resource Message

'Work smarter, not harder,' the saying goes. Here on the incident, working smarter includes:

- encouraging one another in our individual assignments,
- maintaining the collective energy and focus of the team, and
- supporting each other in times of adversity, challenge and change.

Remember that we are all here for a common purpose and each of us is making a valuable contribution to our mission.



Which person is the tallest????

They are all the same size. It is just an optical illusion that makes them look different. We all look different, but inside we are all the same too.

Human Resource Specialist – David Hollins
Contact number – 801-694-8206

Trivia of the day: Maine is the only state whose name is just one syllable.

Resource Advisor's Message – July 26, 2013
The Ubiquitous, Everlasting Single Use Water Bottle

5.1 billion: Amount, in pounds, of polyethylene terephthalate (PET) bottles and jars available in the U.S. for recycling in 2009.

2,456 million: Amount, in pounds, of plastic bottles – including PET and HDPE – actually recycled in 2009.

1.5 million tons: Amount of plastic waste created by bottled water annually

47 million gallons: Amount of oil required to produce the plastic for water bottles annually

50 million barrels: Amount of energy used to pump, process, transport and refrigerate bottled water annually

28: Percentage of PET plastic bottles that got recycled in 2009.

44: Percentage increase in 2009 of RPET (Recycled PET) used in food and beverage bottles.

19: Number of 20 oz. PET bottles it takes to yield enough fiber for an extra-large T-shirt or one square foot of carpet.

Six: Number of hours that the energy conserved from recycling a single plastic bottle can light a 60-watt light bulb.

5 cents: Cost per ounce of bottled water ($6.40 per gallon).

3 cents: Cost per ounce of gasoline ($3.77 per gallon).

1 cent: Cost per gallon of water in most municipal water systems.

2/3: The amount of energy that is saved when producing new plastic products from recycled materials instead of raw (virgin) materials. It also reduces greenhouse gas emissions.

Refill your (hopefully BPA-free) water bottles with potable water, which is available in camp.

If you do use a single use water bottle, recycle it after you are done.

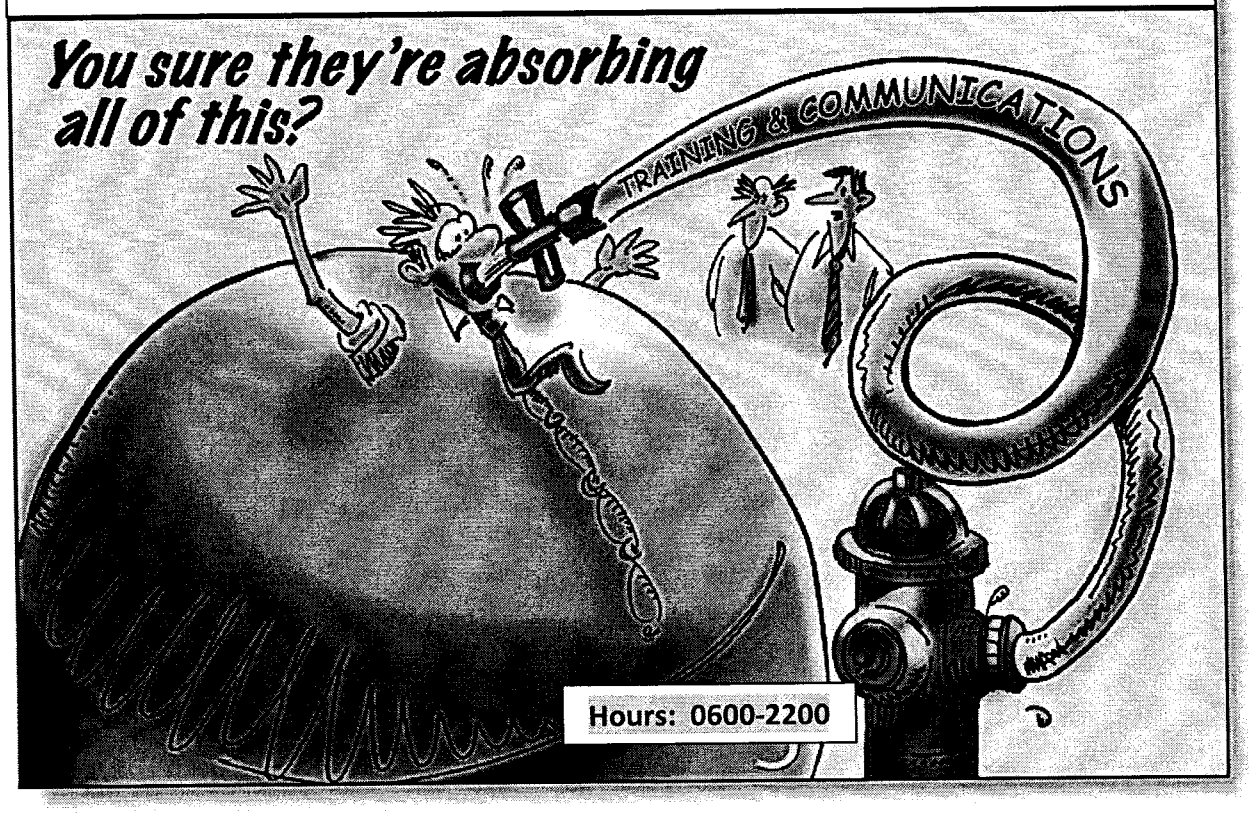
LODGEPOLE TRAINING MESSAGE



Please come into training at the beginning of the assignment rather than waiting till the very end and overwhelming your trainee. It's better to take things a step at a time on the job so these training moments have time to sink in.

Come in with your task book, qualification card and have that initial interview to get your professional development moving in the right direction. Training is right next to check – in and will only take about 15 minutes to get things moving in the right direction.

Thank you,

Linda A. Guy

Training Specialist
