Tips for Riders

Fire Prevention Tips

- Make sure your ohv has a spark arrester installed and operational.
- Do not park your ohv's on dry grass. Exhaust pipes are sometimes glowing hot.
- Keep the rpm's and speed low and steady when you are near houses and campgrounds, or anytime you are around non-riders.
- Make sure all camp or warming fires are dead out. Many wildfires start and camps have been lost by not putting fires dead out.
- Always crush smokes dead out.
- Know where you are permitted to ride and where you are not. Respect private property and closed areas.
- Above all, think of yourself as an ambassador for trail riding. Your actions speak for all.
