OUTPUTS

FIRE BEHAVIOR

GENERAL

Fine Dead Fuel Moisture predicted: 3% Unshaded, 6% Shaded
Live Fuel Moisture= CHAMISE (50-60%) MANZANITA (75-80%) *both critical*
Probability of Ignition = 60% shaded fuels, 90% unshaded.
Spotting Distance= 1/2 mile
ERC in Timber: >97th percentile
Expect surface fire in timber understory and chaparral with transitions to canopy likely when winds align with slope.
The fire area has no fire history or known fuel modification in the last 50 years.

Safety zone for expected fire behavior should be no less than 1 acre in diameter (60 personnel and equipment).
Any night firing operations can expect max relative humidity up to 80% between 2300-0400-fuels may not carry well.

SPECIFIC

Branch I

Interior island in steep terrain may send burning material over control lines. Depth of previous burn operations may be tested if jackpots of unburned become active. Treetops that remain hot may broadcast embers with increased ridge top winds.

Branch II

Timber litter: ROS:<18 ch/hr Flame Lengths: <7'

Steep and inaccessible terrain continues to allow the fire to progress to north toward Little Low Gap Creek. Predicted West/Northwest winds should be favorable in Branch II and push the fire back onto itself. Visibility under heavy canopy will limit crew's ability to monitor the main fire, lookouts in good vantage points are essential.

Branch IV

Brush: ROS:<130 ch/hr Flame Lengths <20' with slope runs

EXPECT INCREASE IN FIRE ACTIVITY The fire will transition into more of a brush fuel model as it becomes established on the east side of the Eel River. Potential for crown runs are high when slope and ground fuels are favorable. Burn periods have increased in time and intensity challenging efforts in the previous operational period. Afternoon winds may align with both Tenmile and Hogshed drainage and will push fire into control lines to the east and south. Spotting will continue to challenge crews sending embers up to 1/2 of a mile.

AIR OPERATIONS:

Inversion over the fire area until 1300 below 1000' AGL

SAFETY

Anticipate changes in fire behavior with changes in fuels weather or topography.
Identify where and when the fire will arrive at any of these "big change" influences:
Wind shifts, slope reversal, alignment, fuel type change.

*****Surface fire transition to crown possible when eye level winds greater than 6mph*****

SAFETY MESSAGE

“LODGE COMPLEX”

CA-MEU 7202 August 9, 2014 0700-0700

Over the past 10 days, IMT 4 has presented hazard and mitigation statements, as well as, presenting some of Team 4's values, that when followed, promotes safety. Today, instead of the tradition IAP Safety Message, we would like to review many of the safety topics and those values that have been presented at previous morning briefings in order to refresh them in our minds and in our actions.

TEAM VALUES

- **Briefings**
 - Our team value is that ALL personnel, down to the lowest level position, receive a thorough briefing of all components of the IAP.
- **Accountability:**
 - It is critical, and an expectation of the team, that all levels of accountability are maintained.
 - Check resources in and out of divisional assignments.
 - Make sure hired equipment is included in the accountability process
- **204 special instructions**
 - Don't skip this section during briefings as it often contains important safety information specific to the division.
- **Situational Awareness:**
 - It's the key to preventing us from being surprised

SAFETY MESSAGE TOPICS

- **Steep Topography- This is tough country!**
 - Pace yourself - it's a marathon not a sprint.
 - Watch out for topography driven fire and rapid upslope runs.
- **Fuels are critically dry as we are in the middle of a 3 year drought.**
 - Fuel type and configuration has lead to rapid fire spread.
- **Predictable Fire Behavior:**
 - Fire weather and fuel has aligned everyday in late afternoon and early evening evenings creating critical fire behavior.
- **Lookouts:**
 - While LCES is a critical safety component, having a lookout in place is the kingpin to exercising LCES.
- **Driving- There are many driving challenges on this incident.**
 - Modify your driving to the situation.
 - Provide Back up and spotter personnel when situations require.
 - Don't drive if you're drowsy.
- **Fatigue**
 - Eat healthy, stay hydrated, manage work rest periods during exhaustive work and take care of one another.

Jack Piccinini

SAFETY OFFICER

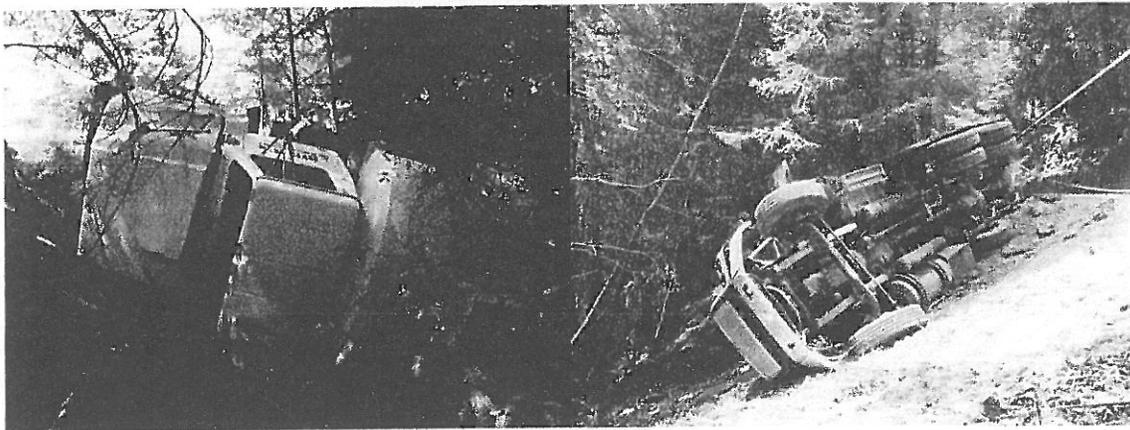

SAFETY MESSAGE ***“LODGE COMPLEX”***

Water Tender Safety Guidelines

Awareness – Several traffic related incidents have occurred on this fire

Mitigation – Drive with a high level of Situational Awareness while on your assignment

- Clarify all instructions, if you are unsure of your assignment.
- Only drive to your comfort level, let your line supervisor know if you are uncomfortable.
- Keep speeds appropriate for the roads / conditions.
- Monitor your fatigue levels and take appropriate measures to mitigate.
- Communicate hazards that you see so that they can be mitigated or flagged for the safety of all others using the roadways.
- Ensure you have good communications with your line supervisor.

CAL FIRE

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
