OUTPUTS

FIRE BEHAVIOR

GENERAL:

The moisture from the rain received on Mon and Tue will be nullified by the end of today's operational period. Perimeter growth remains limited to the 1000 Trails Wilderness as crews employ minimal impact suppression tactics. For the rest of the fire, fire activity remains limited to an extensive amount of heavy down fuels and tree roots. As these fuels continue to smolder and burn out, the increased exposure to the solar radiation increases the opportunity noticeable fire behavior.

New Growth Fire Behavior in Optimal Alignment

Fuel Type	ROS FWD	ROS LAT	FL (Ft)	P(i)G
Brush	30 - 45 ft/min	6 - 8 ft/min	5 - 12	77%
Timber Litter	5 - 9 ft/min	1 - 2 ft/min	2 - 8	77%

Expect Extreme Fire Behavior During any Thunderstorm Event

SPECIFIC:

Fire weakened landscape will continue to create rolling materials (large rocks / stumps / logs). Watch out for snags as cat faces continue to smolder and root bases may still be smoldering. There is the opportunity for thunderstorms to develop in the afternoon as breaks in the cloud coverage heat the surface. If the surface has an opportunity to heat up there is sufficient residual moisture to trigger thunderstorms.

Branch I – DIV I will have the greatest chance for an increase in fire activity as unburned or partially burned fuels (dirty burn) will be in alignment with the predicted wind pattern. The down slope orientation should help to check fire growth. Specific for this area (ROS 11-34'/min; FL 6-12; RH<30% P(i)G 65%; RH>30% P(i)G 57%).

Branch II – The 1000 Lakes Wilderness Area due to the unknown natural fuel loading and the Minimal Impact Suppression Tactics (MIST) provides the best opportunity for any increased fire behavior.

During the initial operational periods the ERC's (RAWS – 40630) were at a 10 yr high 93%. Due to the rain ERC's dropped to a 10 yr low of 50% WED and are forecasted to spike to mid 70% by the start of the weekend. Crews should not assume that the rain received will have a lasting effect on short term fire behavior.

AIR OPERATIONS:

Morning smoke and residual haze throughout the day should not inhibit air operations.

SAFETY

Previous and current suppression efforts have the potential to further weaken terrain creating fire line hazards; rolling material, hot ash root cavities and snags.

8/8/2014

ICS 204 Special Instructions All Divisions

Thunderstorms are possible throughout the fire area today. Review and follow **Thunderstorm Safety**, pg. 21 in your IRPG.

Take frequent hydration and nutrition breaks; document your breaks in your ICS214.

EILER HEALTH AND SAFETY MESSAGE

We Are ALL accountable for SAFE behaviors

INCIDENT: Eiler Incident **DATE:** August 8, 2014 **TIME:** 0700-0700

Major Hazards and Risks: Driving Hazards, Heat, Hazard Trees, Thunderstorms, Fatigue, Drought Stricken Fuels, Narrow Roads, Terrain.

Heat / Fatigue: Days are becoming warmer and drier, take frequent nutrition and hydration breaks throughout the day. Hydrate with a 2 water to 1 electrolyte drink ratio. Utilize the buddy system and monitor for excessive fatigue.

Driving: Roads are opened to the public, be alert for traffic. Park off roadways and use warning lights/flaggers as necessary. Keep your speeds down on all roads. Watch out for loose, dusty roads, unstable shoulders and fire debris. Wear your seatbelts!

Stump Hole Ash Pits: Watch your footing, extensive stump hole ash pits are in the fire area.

PPE: Wear the appropriate PPE for the assignment you are given; don't become complacent.

Fire Behavior: Fuels are drought stricken and are receptive to fire spread. As the weather pattern changes with increased temperatures and decreasing RH anticipate changes in fire behavior and plan accordingly. Consider P.A.C.E and know your L.C.E.S.

Hazard Trees: Survey your work areas for hazard trees, flag and restrict access, use only qualified personnel for tree felling. Review and follow **Hazard Tree Safety**, pg. 22-23 in your IRPG.

Review your ICS 206 and know what to do in the event of a medical emergency

Lookouts, Communication, Escape routes, Safety zones

Hazard Tree Safety

Hazard tree indicators:

- Trees burning for any period of time
- Dead broken or burning tops and limbs overhead, leaning or hung-up
- Numerous downed trees

Hazard Tree Control:

- Eliminate the hazard trees with qualified sawyers
- Avoid high risk areas
- Post lookouts to secure high risk areas
- Keep clear of air drops near trees/snags
- Take breaks out of hazard tree locations
- Follow *Hazard Tree Safety*, pg. 22-23 in your IRPG

Escape Route/Safety Zone Checklist

Escape Routes:

- *More than one escape route
- *Scouted – soils, vegetation, slope
- *Timed – slowest person, fatigue, dozer speed
- *Marked – flagged for day and night use

Safety Zone:

- *Survivable without a shelter
- *Natural – clean burn, water, bare soil/rock
- *Manmade – constructed sites, roads
- *Scouted for size and hazards
- *Close enough considering escape time needed

Remember and Follow:

- *The 10 Standard Fire Orders
- *The 18 Situations That Shout Watch Out
- *The Common Denominators of Fire Behavior on tragedy Fires
- *The Downhill Line Construction Guidelines

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

CAL FIRE

INCIDENT MANAGEMENT TEAM

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214, IMT3 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.

Fire Suppression Repair

It is time to begin planning for the fire suppression repair efforts. A fire suppression repair plan will be developed for the SHU EILER Incident. To accomplish our goals we need to identify problem areas, prescribe the needed work, and ensure that the work is completed.

In an effort to identify problem areas we have created the attached form for use by the Branches and Divisions. As noted on the form, items to consider include: fences and gates damaged during the incident; road and watercourse crossings repairs; culverts and watercourses needing cleanout; fire breaks in need of waterbarring; trash and equipment pickup.

Use the attached form(s) to document locations where repair work may be necessary. Use maps to show locations. GPS's can be down loaded by GIS. Return forms to the Suppression Repair Unit at the end of your shift.
