OUTPUTS

FIRE BEHAVIOR

GENERAL:

Active fire is continues to burn near the DIV I/F break and islands well into the interior. The 100hr / 1000hr fuels and snags continue to hold heat and support active flame production. Saturday's operational period had 1hr / 10hr fuels become active supporting 6 inch to 2 foot flame lengths with a slow rate of spread. This fire activity was in extensive amounts of unburned fuels within 300 feet of control lines.

Fire Behavior in Optimal Alignment New Fire Start Opportunity

Fuel Type	ROS FWD	ROS LAT	FL (Ft)	P(i)G
Brush	45 - 70 ft/min	8 - 10 ft/min	5 - 15	74%
Timber Litter	3 - 8 ft/min	1 - 2 ft/min	1 - 4	74%
Timber Understory	6 - 12 ft/min	1 - 2 ft/min	3 - 8	74%

Expect Extreme Fire Behavior During any Thunderstorm Event

SPECIFIC:

Branch I – DIV I will continue to have fire activity as unburned or partially burned fuels (dirty burn) will be in alignment with the predicted wind pattern. The down slope orientation should help to check fire growth.

Branch II – The 1000 Lakes Wilderness Area was wind tested yesterday and reported only having a limited number of hot spots. Due to the reported weather, all crews will be extricated prior to the expected thunderstorms.

Thunderstorm activity will have the potential to increase fire behavior and create spot fires over control lines.

Local Fire Danger Information provided from the Hat Creek Ranger District; Ladder Butte RAWS
FIRE DANGER POCKET CARD – Past Experience: Current ERC and 10hr fuel moisture levels support high P(i)G, rapid rates of spread and increased spotting potential. Local Thresholds – Watch Out: Combination of any of the following factors greatly increase (FB); 20' Wind > 10mph, RH < 15%, Temp > 80°, 10hr fuel < 5

AIR OPERATIONS:

Morning smoke should clear by late morning; Thunderstorms could limit air operations.

SAFETY Thunderstorm Situational Awareness

Observe the 30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, take the storm precautions (pg 21, 2014 IRPG). Do not resume work in exposed areas until 30 minutes after storm activity has passed.

Eiler Incident Safety Message

14-CASHU-006933

August 10, 2014

Driving

- ✓ Roadways are now open be aware of other drivers when working along roadways – They may not see you! Use warning devices and flaggers if necessary
- ✓ Seat Belts at all times
- ✓ Maintain safe speeds and following distances when in the communities and off road

Fuels, Fire Behavior and Weather

- ✓ **INCIDENT UNDER RED FLAG WARNING!!!** - Potential for Thunderstorms remains in the forecast and will increase as shift goes on – Review **Thunderstorm Safety** on **Page 21 of the IRPG**
- ✓ Fuel moistures are near or at record lows and ERC's at record high levels – Potential for rapid fire growth and erratic fire behavior is still present
- ✓ **Hazard Trees** exist throughout the majority of the incident – Identify and Flag - Utilize qualified fallers – Work only with in prescribed parameters! Refer to **IRPG pg. 22-23**

15. WIND INCREASES AND/OR CHANGES DIRECTION

Hydration, Nutrition and Fatigue

- ✓ As personnel work more and more shifts on the line and the weather becomes warmer – Dehydration can accumulate and sneak up on you. Make sure you are staying hydrated. Minimum of ONE QUART per HOUR per person. Plan accordingly.
- ✓ Take frequent short breaks with small meals or snacks on regular intervals
- ✓ Monitor Personnel for Fatigue - Consider decreasing intervals for breaks or Increasing time – “This is a marathon; NOT a sprint!”

Footing and Rolling Material

- ✓ There is a significant amount of steep and unstable terrain – watch your footing and be aware of rolling material!
- ✓ Watch your Step! – Avoid Stump Holes and Ash Pits – Ground around them can collapse without warning.

PPE

- ✓ Wear all appropriate PPE – Replace damaged and worn equipment

Communications

- ✓ Ensure communications are clear, concise and understood. Ask to repeat if unsure what was said.

THUNDERSTORM SAFETY

Weather / Fire Behavior Category

Thunderstorms cause significant hazards for wildland firefighters, including downbursts that can cause extreme fire behavior and lightning. When thunderstorm development is likely, lookouts should be posted and aware of signs of a developing storm. A sudden reversal in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature may note the mature stage of a storm. Heavy rain, hail and lightning occur only in the mature stage of a thunderstorm. During a storm, use the following guidelines:

- Do not lie down.
 - The best position is sitting on the pack or crouching with feet close together.
 - Avoid sitting directly on the ground, if possible; but, if necessary, keep feet and butt close together.
 - Avoid grouping together. Keep a minimum of 15 feet between people when possible.
 - Removing caulk boots will not provide safety if stocking covered or bare feet are then in contact with the ground--don't bother!
- "Stay out of dry creek beds" is correct for flash floods, but has nothing to do with lightning.
- Handheld radios (with short rubber antennas) or cell phones are safe to use. Communication is vital to crew safety. Do not use land line radios or radios with elevated antennas.
- Wide, open spaces are better than trees or clumps of trees in the vicinity. Ridge tops, etc., should be avoided.
- If you feel the hair on your arms or head "stand up," there is a high probability of a strike in the vicinity. Crouch or sit on a pack.
- Put down all tools.
- Take shelter in vehicles if possible.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

CAL FIRE

INCIDENT MANAGEMENT TEAM

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214, IMT3 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.

Fire Suppression Repair

It is time to begin planning for the fire suppression repair efforts. A fire suppression repair plan will be developed for the SHU EILER Incident. To accomplish our goals we need to identify problem areas, prescribe the needed work, and ensure that the work is completed.

In an effort to identify problem areas we have created the attached form for use by the Branches and Divisions. As noted on the form, items to consider include: fences and gates damaged during the incident; road and watercourse crossings repairs; culverts and watercourses needing cleanout; fire breaks in need of waterbarring; trash and equipment pickup.

Use the attached form(s) to document locations where repair work may be necessary. Use maps to show locations. GPS's can be down loaded by GIS. Return forms to the Suppression Repair Unit at the end of your shift.
