INPUTS

WEATHER SUMMARY:

Today's weather will be mostly clear with some light clouds in the morning hours and smoke covering the northern portion of the fire in the afternoon. The temperatures will be 101- 107 degrees and minimum humidities 8-13 percent. Slope and valley winds will be east 4-7 mph in the morning switching to northwest 5-8 mph after noon. Ridge winds will be north 8-12 mph. The evening will be partly cloudy with low temperatures 68-72 degrees and maximum humidity of 35-40 percent. Winds will be variable through the night as the front moves through the area.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The fuels in the area are a mix of oak woodland with a grass and brush understory and fields of brush with a light grass understory. The fuels are highly stressed and the fuel moisture in the brush is at critical levels, below 60 percent. Single and groups of trees are torching creating spotting $\frac{1}{4}$ to $\frac{1}{2}$ mile ahead of the head of the fire. The head of the fire is progressing at a rapid rate of spread and will increase when in the open grass areas. The slopes and ridges influenced by the wind have complete consumption of the fuels. The backing and flanking fire is dominated by surface fire with occasional torching of individual trees. The hot and dry conditions will contribute to significant fire growth.

SPECIFIC:

The north side of the fire will continue to be lower activity as it backs up slope against the wind. The fire in the Mokelumne River will continue to flank at a slow rate of spread to the east. The southern portion of the fire, south of Highway 26 will continue to spread to the south at a rapid rate of spread with the north wind. Flame lengths in these areas will be 30 to 100 feet depending on the vegetation. Medium range spotting can be expected from torching trees and short dependent crown runs. In the evening the wind in the valleys and slopes will become variable with the approaching front. This will direct the fire up and down canyon, contributing to fire spread to the east and west.

AIR OPERATIONS

Air operations will be limited in the morning until the smoke begins to lift. As the fire increases activity the smoke column may limit air operations at the head of the fire.

SAFETY

Continue to monitor the changes in fire behavior throughout the day for the increase in intensity and rate of spread.

Incident Location

County Amador State-CA Latitude Longitude N Longitude W

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

Fireline personnel- (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

Aviation Operations-

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/ Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as an Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- Review this check list and brief daily.
