INPUTS

WEATHER SUMMARY:

Today's weather will be mostly clear with some light clouds in the morning hours and smoke covering the northern portion of the fire in the afternoon. The temperatures will be 101- 107 degrees and minimum humidities 8-13 percent. Slope and valley winds will be east 4-7 mph in the morning switching to northwest 5-8 mph after noon. Ridge winds will be north 8-12 mph. The evening will be partly cloudy with low temperatures 68-72 degrees and maximum humidity of 35-40 percent. Winds will be variable through the night as the front moves through the area.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The fuels in the area are a mix of oak woodland with a grass and brush understory and fields of brush with a light grass understory. The fuels are highly stressed and the fuel moisture in the brush is at critical levels, below 60 percent. Single and groups of trees are torching creating spotting ¼ to ½ mile ahead of the head of the fire. The head of the fire is progressing at a rapid rate of spread and will increase when in the open grass areas. The slopes and ridges influenced by the wind have complete consumption of the fuels. The backing and flanking fire is dominated by surface fire with occasional torching of individual trees. The hot and dry conditions will contribute to significant fire growth.

SPECIFIC:

The north side of the fire will continue to be lower activity as it backs up slope against the wind. The fire in the Mokelumne River will continue to flank at a slow rate of spread to the east. The southern portion of the fire, south of Highway 26 will continue to spread to the south at a rapid rate of spread with the north wind. Flame lengths in these areas will be 30 to 100 feet depending on the vegetation. Medium range spotting can be expected from torching trees and short dependent crown runs. In the evening the wind in the valleys and slopes will become variable with the approaching front. This will direct the fire up and down canyon, contributing to fire spread to the east and west.

AIR OPERATIONS

Air operations will be limited in the morning until the smoke begins to lift. As the fire increases activity the smoke column may limit air operations at the head of the fire.

SAFETY

Continue to monitor the changes in fire behavior throughout the day for the increase in intensity and rate of spread.

SAFETY MESSAGE/PLAN (ICS 208)

3. Safety Message/Expanded Safety Message, Safety Plan, Site Safety Plan:

Major Hazards/Risks

Fire Behavior: Be alert , Weather is getting hotter and dryer. Watch for shifting Winds. Ensure LCES is in place.

Communications: Review ICS 205 Communication plan with your crews, ensure it is understood by all.

Hydration/Nutrition/Fatigue: Hydration and nutrition starts prior to getting to the line, ensure your personnel are prepared for the shift. Continuously monitor your people.

Driving Hazards: Utilize caution and reduce speed, congestion will be encountered in camp and on the line. Utilize proper spacing and speed when traveling on narrow roads. Be mindful of falling and rolling materials on HWY 26.

Hazardous Trees/Snags: Identify, communicate and flag, Fall hazardous trees with qualified personnel.

Stump Holes: Identify, flag and ensure personnel are aware of hazard

Powerlines: Use caution when working under and around powerlines. Consider all lines are energized until proven otherwise. Flag off with proper life hazard flagging.

Level of Engagement: Ensure experience level of your crews before getting engaged, Do not overly commit.

Special Hazards: Do not get complacent be aware of the following Maijuana grows and Mine shafts in and around the fire perimeter.

Empower your people and encourage small unit leadership

“Never tell people how to do things. Tell them what to do and they will surprise you with their ingenuity”.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

Fireline personnel- (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

Aviation Operations-

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
