Winds- Morning: E 2-5 mph, Afternoon: 4-8, G12-16 mph

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- The active burn period is well beyond typical conditions. Expect fire activity to pick up early and remain active late into the evening or early morning hours.
- Fuels to the North and South of the perimeter have no recorded fire history. Fuels to the East of the fire have not burned in 35+ years
- Fire is predominately fuels and topography driven
- Even with lower temperatures and higher relative humidity, fuels are stilled drought stressed and are in favor of extreme burning conditions
- If fire plume develops and collapses, watch for spot fires and increased activity in all directions

SPECIFIC:

All Divisions: Spot fires outside established containment lines or new starts...

Flame Lengths- Up to 11 ft. in Grass, Up to 18 ft. in Brush

Rate of Spread- Up to 125 feet/minute in Grass, Up to 90 feet/minute in Brush

Spotting Distances- Up to .25 miles in Grass/Brush, Up to .3 miles in Torching Trees

Probability of Ignition- Shaded Fuels: 80%, Unshaded Fuels 90% at the peak of the burn period

AIR OPERATIONS:

Winds aloft will remain out of the south and southeast 10-15 mph transporting smoke to the west. Smoke conditions will give limited visibility. A threat of thunderstorms may temporarily limit the use of aircraft.

Sunrise: 0610 Sunset: 2023

SAFETY

You must understand your fire environment before you engage.

Exceptionally dry fuels warrant a high degree of caution.

Observed burning conditions are more representative of late summer burning conditions.

Don't become complacent! Identify your safety zones and escape routes.

ROCKY HEALTH AND SAFETY MESSAGE

We Are ALL accountable for SAFE behaviors

INCIDENT: Rocky Fire CA-LNU-006984

DATE: August 01, 2015 **TIME:** 0700-0700

Major Hazards and Risks: Limited Resources, Drought Stricken Fuels, Fatigue, Narrow Roads, Terrain.

Fire Behavior: Fuels are drought stricken and are receptive to fire spread. As the weather pattern changes and begins to dry be alert to changes in fire behavior. Don't let the light rain make you complacent.

Manage yourself and those around you for excessive fatigue; many have driven long distances or been deployed for extended periods. Use the buddy system and take breaks as needed.

As fatigue increase, injuries tend to increase also. Maintain situational awareness.

Hazard trees: Survey your work areas for hazard trees, flag and restrict access, use only qualified personnel for tree felling. Review and follow **Hazard Tree Safety**, pg. 22-23 in your IRPG.

Eat and drink fluids on a regular basis to maintain an appropriate energy level for any expected work assignment. Remember, you are the only one that knows your limitations.

Review your ICS 206 and know what to do in the event of a medical emergency.

Lookouts, **C**ommunication, **E**scape routes, **S**afety zones

Heat Illness Prevention:

- **Drink plenty of fluids:**
 - **Water and Gatorade**
- **Avoid drinking energy drinks**
- **Rest when you can**
- **Find shade when you can**
- **Eat nutritious food regularly**

Tailgate Safety

- **Accountability:** everyone checks in and everyone checks out. Supervisors know where their crews are at all times
- **Communication:** everyone knows the com-plan
- **Briefing:** everyone knows the game plan, everyone knows the contingency plan
- **Safety gear:** everyone has the appropriate safety gear and in good working condition
- **LCES:** they are clear and made known to everyone

Prepared By (Communications Unit): **John Aguilera, COML, IMT #2**

Incident Location: **LOWER LAKE, CA**

County: **LAKE** State: **CA** Latitude: **38 54' 44 N** Longitude: **122 29' 21 W**

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
