| <b>Comments /notes on tonight's mission and this interpretation:</b>  |  |   |   |
| <p>There was large growth on the North end of the fire. I did not remove some of the polygons from the last flight since I could not validate if they were gone. Based on fire activity I would assume they have been burnt up.</p> <p>There was also growth seen on the South end of the fire as well.</p> <p>There was a little growth along the South West edge.</p> <p>There was one isolated heat source ahead of the main fire, this has been noted with a lat and long and I also gave this info to the GISS James to pass on to operations @ 11:41 PDT tonight.</p> |  |   |   |
