Comments /notes on tonight's mission and this interpretation:			
<p>There was a little growth on the North and Northeast end of the fire, just north of Canyon Reservoir.</p> <p>The was large growth with intense heat along the North West side of the fire.</p> <p>It appears that the fire have hit or even crossed the river on the North end of the fire this needs to be validated its to close to really tell on the image. I have placed a note with lat and long as well</p> <p>There was also growth seen on the South end of the fire as well.</p> <p>There were 2 isolated heat source around the fire that maybe at or over the line, these have been noted with a lat and long.</p> <p>The one on the south end is nealy 1 mile from from and could be warming fire.</p>
