INCIDENT OBJECTIVES

1. Incident Name

Soberanes Fire

2. Date Prepared

09/2/16

3. Time Prepared

1900

4. Operational Period – 09/3/2016 0700 SAT - to - 09/4/2016 0700 SUN

Management Objectives:

- Provide for firefighter and public safety through the application of sound risk management analysis and the implementation of appropriate mitigations.
- Protect communities, infrastructure, utilities, improvements, historical assets, and the Ventana watershed.
- Ensure cost containment measures are identified and applied.
- Enhance community relations and political relationships through timely information exchange.
- Provide for initial attack assistance at the request of Monterey Ranger District of the Los Padres National Forest.
- Integrate BAER team into the IMT planning process.
- Demonstrate principles of respect and dignity.

Control Objectives:

- Complete suppression repair activities at the north end of the fire in Branches I, II, and IX.
- Protect private property, surrounding communities, and values at risk by keeping the fire:
 - North of Nacimiento-Ferguson Road to limit fire growth toward values to the south.
 - West of Carmel Valley and Reliz Canyon to avoid impacts to the communities along the Highway 101 corridor and Fort Hunter Liggett Military Reservation.
 - East of Highway 1 to protect the visual corridor of this National Scenic Byway.
- When possible, minimize adverse effects to the Ventana Wilderness area by using minimum impact suppression tactics (MIST). Where opportunities exist, use natural features and preexisting containment lines. Consult with Resource Advisers to ensure tactics are compatible with social, economic, and environmental values.

Command Emphasis:

Protect values at risk by using a combination of direct and indirect tactics to suppress the fire. A key element of the strategy is to apply the right resources, to the right task, at the right time, for the right duration in order to achieve objectives with minimum firefighter exposure.

Situational Awareness:

Incident personnel understand daily operational direction for all phases of the incident. Personnel take responsibility for their own personal safety as well as the safety of others, and take corrective action where appropriate. Everyone assigned to the incident understands their roles and responsibilities within the incident medical plan and the incident emergency plan.

Stop, think, talk... then act in response to any situation that may represent unnecessary exposure.

OUTPUTS

FIRE BEHAVIOR

GENERAL

Fuels are critically dry and climatology suggests no rain in the near future. The fire is burning primarily in a mix of brush and oak burned in the 2008 Basin Fire. Snags, skeleton brush and heavy downed fuels are abundant and will increase the fire line intensity. Where wind and slopes align, the fire can exhibit rapid rates of spread, large flames lengths, and short range spotting. Drainage winds will play an important role in fire behavior. 10-20' flame lengths in brush fuels should be expected.

ERC 65 1hr 4-6% Pig 70% Rate of spread head fire in brush 50-70cph Spotting up to 1/3 mile

SPECIFIC

BRANCH III, IV,VI

The fire above Sulphur Springs Camp will continue to flank, and roll out. The potential for spotting across the Carmel River is decreasing as fuels are consumed.

There is still no heat observed near Miller Mountain and above the English Cabin. The potential for spread is decreasing daily as no smoke is observed in the area.

Branch VIII

DIV N – The fire is flanking towards Strawberry Camp in the upper reaches of South Fork of Big Sur River. It should reach Strawberry Camp today. Expect the fire to continue to finger across the South Fork to the west and make short uphill runs towards Pick Creek. Existing fire in Pick Creek is in the bottom of the drainage. There is potential for slope reversal and runs toward the line between Chimney House and Cold Springs. Heavier fuels on the north and east aspects are burning but not as readily as on south and west aspects. Expect uphill runs and short range spotting to continue in areas where fuels have a chance to build some momentum.

Branch VII

DIV UU & SS – Fire is not expected to reach these divisions this burn period.

AIR OPERATIONS

If marine layer is present, it will burn off 0900-1000.

SAFETY

The chance for spotting over the Coast Ridge Road is still present.

FORECAST ISSUED: 1900 9/2/16

WEATHER DISCUSSION: The marine layer will be about 2000 feet this morning with some coastal drizzle likely. The trend for today will be cooler with higher humidity as a dry cold front passes through the region. West to Northwest winds will increase this afternoon as the weather system and seabreeze winds align bringing some gusty onshore winds to the ridges of Branch 7&8. Smoke transport winds will be northerly as well keeping most of the smoke over the ocean or towards the southern divisions on the fire. Any planned firing operations on the west side should expect to see a noted increase in the sustained wind speeds this afternoon as the boundary moves through. Good humidity recovery this evening and overnight with some drizzle likely on the coastal slopes as well as along Carmel Valley.

WEATHER FORECAST For Saturday:

WEATHER: Morning coastal/valley clouds and drizzle. Mostly clear interior with smoke.

TEMPERATURES: Highs 75-85 active fire area. Around 90 in Branch 6. 65-75 lower slopes. (4-8 cooler)

HUMIDITY: 20-35% active fire area. 50-60% lower slopes. Trend of 5-15% wetter especially late afternoon.

20 FT WINDS:

RIDGETOP - West to Northwest 3-6 mph increasing 6-12 mph with afternoon gusts 15-20 mph.

SLOPE/VALLEY - Light becoming strong upvalley 5-10 mph gusts 15 mph late afternoon.

Marine Layer: 2000 to 2500 feet. Mixing out during the afternoon due to strong boundary layer winds.

WEATHER FORECAST For Saturday Night:

WEATHER: Marine clouds surging inland over the northern and western branches of the fire. Coast drizzle.

TEMPERATURES: Lows 48-58.

HUMIDITY: Good recovery most of the fire 80-100% coast and lower slopes. 40-50% above 3000 feet.

20 FT WINDS:

RIDGETOP – Northwest 8-15 mph evening gusts 25 mph. Easing overnight. Local northeast winds in Branch 7&8 but under 8 mph.

SLOPE/VALLEY – Upcanyon 5-10 gusts 15 mph til 10 pm then gradually easing overnight.

Marine Layer: 2500 to 3000 feet.

EXTENDED FORECAST: Seasonable Sunday and Monday with upper trough over West Coast. Gradual warming each day with general northwest winds along with moderate humidity recovery. More pronounced warming and drying trend Tuesday thru Thursday.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

News Flash

There will be increased bicycle traffic on Carmel Valley Road, with group rides and races planned for the day. California law requires that you give cyclists 3 feet of clearance when passing.

Fire Order of the Day – Initiate ALL actions based on current/forecasted weather and expected fire behavior

Narrative: Winds are expected to increase over the next couple of days. This is going to require all fire fighters to be heads up for increasing winds and make sure you have LCES in place. Request ATGS coverage if fire activity and or winds pick up.

Subject: Steps for Safe Chainsaw Fuel Handling

Issue: Fire personnel have experienced fuel geysering incidents with chainsaws. In the last two years some of these incidents have resulted in serious injury to firefighters from ignition of sprayed fuel and vapor. Geysering has also been encountered while opening fuel transport containers (e.g. fuel cans, bottles, and dolmars) as well as small gasoline powered engines including leaf blowers.

Geysering describes the rapid energetic expulsion of fuel. It occurs when the fuel in a closed (non-vented) system becomes superheated and pressurized. Once heated and pressurized, removal of the fuel cap from a partially filled tank can result in rapid depressurization and unintended discharge of vaporous fuel.

Seven (7) Steps for Safe Chainsaw Fuel Handling:

1. **Move 20 feet or more from any heat source** before removing the fuel cap. Remember a hot chainsaw engine or exhaust can potentially ignite spilled fuel.
2. **Check the fuel level** by looking through the side of the translucent tank before removing the fuel cap.
3. If fuel level is above ½ tank and the equipment has been running poorly, **allow the engine to cool for 15 minutes before removing fuel cap**. A vapor-locked chainsaw has a higher probability of geysering. Indications of vapor lock include but are not limited to: a) engine running poorly, 2) engine acts like it is running out of fuel, and 3) engine stops but still has fuel.
4. **Expect a fuel release** any time a fuel cap is removed and plan accordingly. Remember fuel can be sprayed from the tank in a 360 degree radius as it is opened. This applies to all caps but in particular tool-less (quarter turn) chainsaw caps.
5. **Open cap slowly**. Stop rotation and hold at the first detent on chainsaws with the tool-less (quarter turn) fuel cap.
6. **Use fresh fuel mix** – Do not use fuel older than one month. Gasoline purchased in winter months is more volatile and boils at a lower temperature. Do not use fuel that has a strange odor.
7. **Ensure and double-check** that the chainsaw cap is correctly installed before returning to operation.

ALWAYS ASSUME ALL FUEL TANKS AND CONTAINERS ARE PRESSURIZED BEFORE REMOVING THE FUEL CAP

Archaeological and Historical Sites Fireline Guidance for the SOBERANES Incident

One of the values we protect on our National Forest is Heritage Resources, this includes the preservation of Historic sites, Archaeological sites, and sites with traditional or sacred values.

Known archaeological sites are flagged for avoidance with blue flagging tape and yellow and black stripe flagging tape together. Do not compromise safety for the protection and preservation of archaeological and historic sites. When feasible and prudent:

1. ***Be on the lookout for prehistoric and historic sites.*** Prehistoric archaeological sites include boulders and bedrock with mortars and cupules, holes and grinding surfaces, temporary camps containing scatters of stone flakes, and deposits of dark brown to blackish soil with shell fragments (midden) occurring in layers or mounds on flat surfaces near sources of water, along coastal areas and wetlands, along ridges and saddles, and other areas suitable for camping. Historic sites include old wooden cabins, barns, corrals and other buildings, rock foundations and historic artifact scatters. These kinds of resources are often found in the same kinds of environmental settings as prehistoric camp sites.
2. Some archaeological and historical sites have not been flagged yet. If you observe artifacts, features, or sites, attempt to avoid dozing or driving through and/or parking on these sites, if feasible, especially with heavy equipment. Some sites can be protected through avoidance, or by carefully removing flammable materials adjacent to sensitive features, or by wrapping with protective fireproof fabric.
3. If you can't avoid sites, minimize disturbance as much as feasible, only clearing the surface to as minimal a depth and width as necessary.
4. Leave all artifacts in place. Some artifacts may have been intentionally placed for religious or ceremonial reasons.
5. When a site is discovered, flag it for visibility and report its location to a Division Supervisor. ***If feasible, plot locations of discovered resources on a map, and take a gps reading and photograph.*** Leave the information with an archaeologist (in the READ tent) so that sites can be relocated and protected during both the suppression and fire suppression repair phases of the Incident.
6. ***If you encounter a burial or human remains, cease work in the area immediately*** and contact the USFS Archaeologist. State law requires that the Archaeologist contact the Coroner, who will determine if the remains are part of a crime scene.
