Weather Discussion: An approaching upper level trough will increase southwest winds along ridges through the day before a dry cold front swings through and brings a strong push of northwest winds late this afternoon and evening. The strong winds will continue overnight, shifting from the northwest to a more northerly direction. Relative humidities will climb sharply after midnight as the marine layer deepens to 4000 to 5000 ft, temperatures cool and the last remnants of the persistent dry thermal belt layer mixes out. Additionally of concern, once the winds shift to the northwest, the stronger winds will mix down into the northwest to southeast running valleys such as Miller Canyon and Pine Valley where they will combine with lower afternoon relative humidities to create potentially critical fire weather conditions from late afternoon through the evening.

WEATHER FORECAST for Today: Dry Cold Front Approaching this Afternoon

	Coastal Valleys / Lower Slopes	Ridgetops / Upper Slope	Inland Valleys / Lower Slopes
Weather	Marine clouds along the coast to around 2000 ft in the morning.	Sunny…then increasing clouds in the afternoon as a dry cold front approaches.	Sunny…then increasing clouds in the afternoon as a dry cold front approaches.

WEATHER FORECAST for Tonight: Partly to mostly cloudy. Marine layer 4000 to 5000 ft. Upslope enhanced clouds possibly forming along ridges. Lows in the 40s. RHs 20 to 25% in the evening increasing to around 30% by 2200…40% by midnight then rapidly increasing to a maximum RH around 80% overnight. Northwest winds 25 to 30 mph along ridges with gusts up to 40 mph…turning more N to NW by morning.

OUTLOOK for Saturday: Cooler and breezy. Northwest winds 15 to 25 mph. Highs 70 to 80. Minimum RHs around 30%. Lows in the 40s with nighttime recoveries 70 to 80%.

EXTENDED FORECAST for Sunday through Wednesday: The cooling trend will accelerate Sunday and Sunday Night as a deeper upper level trough swings through northern California. Northwest winds will increase to 25 to 35 mph through the day Sunday as the trough approaches with RHs increasing to near 100% Sunday night behind it. Additionally temperatures will fall into the mid 30s along ridges Sunday night and mid 40s lower down. Winds will become more northerly and gradually diminish Monday and Tuesday. A warming trend will return mid-week with a shift to offshore flow as an upper level ridge begins rebuilding over the area.

FIRE BEHAVIOR

GENERAL

LOCAL THRESHOLDS – WATCH OUTS

Combinations of any of these threshold factors can greatly increase fire behavior:

Thresholds:		20' wind Over 7mph	RH Less Than 17%	Temperatures Over 98°	10hr fuel Less than 6%
Forecasted	**Ridges**	**20-30 mph**	20-25%	70°	**4-9%**
	Valleys	**20-30 mph**	20-25%	80°	**4-9%**

Coastal Sage Scrub fuel, primarily chamise and button brush, have seasonally low live fuel moisture for this time of year. Fire continues to burn in areas burned by both the 1999 Kirk and 2008 Basin Fires, and further south in fuels burned only once by the 2008 Basin fire. Snags, skeleton brush and heavy downed fuel are abundant.

Probability of ignition: Day: Unshaded 80% Night: 40%

SPECIFIC

ALL DIVISIONS

Similar to last shift, expect to get smokes from isolated heat within the fire perimeter. Surface fuels remain extremely dry due to drought conditions. Areas that appeared to be dormant for several weeks, are now starting to show themselves. The potential is still there for large fire growth, but the probability is low due to minimal active fire perimeter.

West Operational area may have some creeping and smoldering heat.

East Operational area will continue to have smoke pop up where there is heat. Expect creeping and smoldering where there is still scattered heat. Within the Church Ranch area there will be active fire behavior within the fire perimeter between Pine Valley and Tassajara Drainage where the fire continues to burn. There will likely be upslope rapid runs. It is possible for plumes to develop, but they will be short lived. Spotting distances in this area >1/10th mile.

AIR OPERATIONS

VFR conditions expected through the operational period.

SAFETY

Avoid having an hazardous attitude!!!

Soberanes Fire – Safety Message

INCIDENT #CA-BEU-003422	DATE:**9-30-16**	TIME: **0700-1900**

Major Hazards

- ***Traffic Hazards and Driving***
- ***Weather and Fire Behavior***
- ***Line Construction in Tassajara/Div.CC***
- ***Hazard Trees in Fire area and Weakened Trees in both Toro and Rana camps***
- ***Hydration and Fatigue:*** Hydration starts PRIOR to the beginning of shift, drink a 2:1 ratio of water to sports drinks. Monitor fatigue levels, and do not exceed the 2:1 work rest ratio.
- ***Working around Heavy Equipment in the suppression repair groups***

Quote written on a road sign in Mexico:

"Es mejor perder un segundo en la vida, que en un segundo perder la vida."

In English means:

"It's better to lose one second in your life, than in one second lose your life."

So…slow down and don't be a distracted driver.

Drive like your life depends on it!

- Drive defensively! Expect the unexpected around every curve.
- **Where operationally feasible, rest drivers one hour before returning to camp.**
- Always fasten seat belts **before** the vehicle is set into motion.

- When driving, keep speed at or **below** the posted speed limit.
- Allow opposing heavy vehicle traffic to **pass slowly on the uphill side** of narrow access roads, after ensuring there is adequate room.
- **Increase following distance between vehicles in dusty or smoky areas.**

Beware of Soft Shoulders

1) Many incident roads have **soft shoulders** on the downhill side.
2) Wheels may sink into these areas causing the driver to **lose control** of the vehicle.
3) **Stay well away** from the downhill side of all roads.

Central Coast IMT Safety Officer

INCIDENT RISK ANALYSIS SOBERANES FIRE CA-BEU-003422 (ICS 215a) Day Shift

DIV/BR	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	TRAFFIC HAZARDS AND DRIVING	• Use caution while driving on all incident roads. • **Drive defensively!** Expect the unexpected around every curve. • Watch for other vehicles, distracted drivers, rocks and debris on the roadway. • Beware of heavy local traffic on Carmel Valley Road, Hwy. 68 and Hwy. 1. • Drive with headlights on; wear seatbelts, use chock blocks, keep windshields clean, look before backing; and use backers when available. • **Roads are narrow with steep drop-offs.** • Flagging on the side of North Coast Ridge road indicates a false berm or soft shoulder created by heavy equipment.
ALL	WEATHER AND FIRE BEHAVIOR	• **Cold dry front coming in afternoon. There is potential for Extreme Fire Behavior.** • **Look for winds to increase in afternoon for 6 to 8 hours.** • With the wind, look for more issues with hazard trees in afternoon. • **Stay hydrated. Monitor resources for heat related illness.** • Communicate any observed changes in weather and fire behavior. • Maintain adequate escape routes and safety zones. Set trigger points. • Expect the unexpected with drought stricken fuels at critically low fuel moistures. • **Historical trends indicate changes in the fire environment support large fire growth.**
Tassajara CC	LINE CONSTRUCTION	• Conduct thorough briefings for all personnel involved (inside rear cover IRPG). • Ensure LCES in place prior to engagement (IRPG p. 7). • Establish adequate safety zones (IRPG p.8) and escape routes. • Use Downhill Line Checklist (IRPG p. 9). • Use "Look Up, Look Down, Look Around" procedures (IRPG p. 3-4) • Utilize Risk Management Process (IRPG p.1).
ALL	MOP-UP	• Evaluate areas for hazard trees and locate stump holes for avoidance. • Monitor fatigue; adjust shifts to increase rest where appropriate. • Provide motivation to workers to maintain situational awareness and avoid complacency. • Evaluate mop up distances against what is safe and necessary. • Review and follow "Look Up, Look Down, Look Around" procedures (IRPG p. 3-4). • Survey your work area. Assess the hazards and implement appropriate mitigations.
ALL	COMMUNICATIONS	• Share your Situational Awareness with those who also have a need. • **Radio Communications may be poor in some areas. Use human repeaters.** • Ensure all personnel are familiar with the incident communications plan. The Soberanes Fire is using 2 different groups. Ensure you are using the proper one. • Don't be afraid to over communicate. • Ensure everyone gets a proper and thorough briefing. • Know who you are working for.
ALL	AVIATION OPERATIONS	• Use risk analysis to determine if any given flight is necessary. • Use air to ground tactical frequency when assigned a specific aircraft. • Use air to ground command frequency to communicate with air attack. • Use concise statements & clock directions when directing aircraft IRPG pg. 57. • Maintain good separation between ground forces & water/retardant drops. • Review and follow "Aviation Watch-Out Situations" on page 44, IRPG. • Remember visibility changes minute by minute here on the Soberanes Fire.
ALL	HEAVY EQUIPMENT OPERATIONS	• Ensure communications are established with operators. • Use hand signals if other communications are unavailable. • Maintain a 50'-100' exclusion area around equipment. • When in timber, increase distance to 2.5 times the height of the tress. • Never work below or behind heavy equipment.
ALL	ENVIRONMENTAL HAZARDS	• Keep alert for wildlife, cattle, rattlesnakes, bees, and insects. • Watch footing and hand placement around rocks. • Determine if any personnel under your control are allergic to bee stings. • Ensure all personnel can identify poison oak in work and camp areas. • Identify employees who are highly receptive to poison oak and minimize their exposure. • Utilize line medics at the earliest appearance of allergic reactions.
ALL	STRUCTURE PROTECTION	• Review Structure Protection; IRPG pages 12-16. • Do not commit to stay at a structure unless the area around the structure represents an adequate safety zone. • Set trigger points to disengage and allow adequate time to relocate to primary and secondary safety zones. • Look for propane tanks and other hazardous materials.

Incident Location

5 MILES SOUTH OF CARMEL, GARRAPATA STATE PARK, MONTEREY CALIFORNIA

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

Human Resources Message

THOUGHT FOR THE DAY

Just as accident rates increase when you become a little complacent, so do human resource contacts and complaints of inappropriate behavior, harassment, and discrimination.

- **The fire has been going on for awhile**
- **People are starting to get tired, and some ready to go home**
- **People have a little more time to think about things that upset them during a fire**
- **People are more easily irritated**

Be aware of these facts and make the necessary effort to recognize and deal with human resource situations before they become conflicts that are painful and out of control.

Carl shoves Roger, Roger shoves Carl, and tempers rise

"Yesterday is history, tomorrow is a mystery, today is a gift, which is why we call it the present."— Bill Keane
