Forecast Information & SPOT Forecasts

FORECAST NO: 71

NAME OF FIRE: Soberanes

SHIFT DATE: Sunday Oct 2, 2016

UNIT: CA-BEU/LPF MRD

TIME AND DATE

FORECAST ISSUED: 1900 10/2/16

**Weather Discussion:** A strong upper level trough swinging inland well to the north will bring increasing clouds and winds. The associated cold front will cross the fire area around noon with northwest winds increasing in the afternoon and evening. Miller Canyon, Pine Valley, Tassajara Creek and other NW to SE aligned valleys will be favorable for channeling the stronger northwesterly ridge level winds down to lower elevations within these valleys. Breezy winds will continue through the night however humidities will increase rapidly as temperatures cool sharply behind the front. Up-slope clouds will form along ridges overnight with mist and light drizzle possible but accumulating measurable precipitation unlikely.

## WEATHER FORECAST for Today:

	Coastal Valleys / Lower Slopes	Ridgetops / Upper Slope	Inland Valleys / Lower Slopes
<b>Weather</b>	Clouds increasing through the morning. Windy in the afternoon.	Mostly sunny with clouds increasing through the morning. Becoming windy in the afternoon.	Sunny early...then increasing clouds until the frontal passage midday. Partly cloudy and windy in the afternoon.
<b>Highs</b>	In the upper 60s	In the lower 60s	In the lower 70s
<b>Min RHs</b>	30 - 40%	Around 30%	25 to 30%
<b>20 ft Winds</b>	North wind 10-15 mph with gusts to 20 mph in the morning becoming NW 20 to 30 mph in the afternoon.	NNW to NE wind 10-15 mph with gusts to 20 mph in the morning becoming NW 20 to 35 mph in the afternoon.	Upslope winds 3-5 mph becoming up-valley 5-8 mph with gusts 10-15 mph in the afternoon. E-NE winds 15-20 mph through lower elevations in Arroyo Seco and Willow Creek. <b>NW winds 10 to 15 mph in NW to SE drainages such as Miller Canyon, Pine Valley and Tassajara Creek increasing to 20 to 30 mph in the afternoon.</b>

**Marine Layer:** Cooler and moister throughout, but no well-defined marine layer.

**Haines:** 3

**WEATHER FORECAST for Tonight:** Partly to mostly cloudy and colder. Up-slope flow causing clouds to form along ridges and west facing slopes near the coast. Lows in the mid-30s ridges and lower to mid-40s valleys. Max RHs 80% to 90% valleys and near 100% ridges. Northwest winds 20 to 30 mph with gusts 35 to 40 mph in the evening...gradually diminishing overnight. Areas of mist and light drizzle possible along ridges and coastal slopes however, accumulating precipitation is not expected over the fire area.

**OUTLOOK for Monday:** A second frontal system moving through on Monday will bring a chance of light rain in the afternoon or evening. Any precipitation that does fall will be light with only a couple hundredths of an inch of rain expected. North winds 15 to 20 mph with gusts to 25 mph in the morning will turn northwest in the afternoon and then southwest in the evening and diminish overnight. Highs in the mid-60s ridges to mid-70s valleys. Minimum RHs 40 to 50%. Lows in the upper 30s on ridges to mid to upper 40s in valleys. Nighttime RHs around 80%.

**EXTENDED FORECAST for Tuesday through Friday:** After diminishing somewhat Monday night, winds will increase again out of the N to NW Tuesday and then become northeasterly Wednesday with conditions warming and drying through the end of the week.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 70	<b>TYPE OF FIRE</b> Wildfire
<b>FIRE NAME:</b> Soberanes East/West Operational Area	<b>OPERATIONAL PERIOD</b> 10-2-2016 24 HOUR SHIFT
<b>DATE ISSUED</b> 10-1-2016	<b>TIME ISSUED</b> 1700HOURS
<b>UNIT</b> CA-BEU-003422	<b>SIGNED</b> Josh Eichamer FBAN (t) 

### INPUTS

**\*\*\*Review Weather Forecast for details\*\*\***

*Gusty northerly winds expected throughout the day. RH values will slowly increase into the evening hours as a cold front approaches.*

### FIRE BEHAVIOR

#### GENERAL

Increasing cooler temperatures and higher RH values will assist in reinforcing control lines. Surface fuels remain extremely dry due to drought conditions and will take time to fully recover. Areas that appeared to be dormant for several weeks will continue to show themselves throughout the shift. The potential is still there for fire growth, but the probability will diminish as RH values increase

#### Optimal Alignment - Peak Burning Conditions

**POI = 70 - 80%    Spotting Distance= up to 1/2 Mi.    ROS 125 ch/h    Fine Dead Fuel Moisture = 5%**

#### LOCAL THRESHOLDS – WATCH OUTS

Coastal Sage Scrub fuel, primarily chamise and button brush, have seasonally low live fuel moisture for this time of year. Fire continues to burn in areas burned by both the 1999 Kirk and 2008 Basin Fires, and further south in fuels burned only once by the 2008 Basin fire. Snags, skeleton brush and heavy downed fuel are abundant

Combinations of any of these threshold factors can greatly increase fire behavior:

<b>Thresholds:</b>	20' wind Over 7mph	RH Less Than 17%	Temperatures Over 98°	10hr fuel Less than 6%
--------------------	-----------------------	---------------------	--------------------------	---------------------------

### SPECIFIC

- West Operational area may have some creeping and smoldering.
- East Operational area may have some creeping and smoldering.
  
- The possibility for active fire behavior in the Pine Valley and Tassajara Drainage will remain through the burning period.
- Active surface fire and occasional runs remain possible in the Ventana Cone area.

### AIR OPERATIONS

Gusty winds will create turbulent flight conditions.

### SAFETY

Careful consideration should be given when working around fire weakened timber and in areas where unburned fuels exists between you and the main fire.

Remember, you are the primary value at risk on this fire.

# Soberanes Fire – Safety Message

INCIDENT #CA-BEU-003422

DATE: 10.2.16

TIME: 0700-1900

## Major Hazards

- **Traffic Hazards and Driving**
- **Weather and Fire Behavior**
- **Line Construction in Tassajara/Div.CC**
- **Hazard Trees in Fire area and Weakened Trees in both Toro and Rana camps**
- **Hydration and Fatigue:** Hydration starts PRIOR to the beginning of shift, drink a 2:1 ratio of water to sports drinks. Monitor fatigue levels, and do not exceed the 2:1 work rest ratio.
- **Working around Heavy Equipment in the suppression repair groups**

## Dutch Creek Protocol

The tragic death of Andrew Palmer on the Iron Complex fire in northern California has led to a safer work environment for wildland firefighters. Andrew was injured by a falling tree and bled to death before he was transported to the Redding, California airport three hours and 20 minutes after the accident. As a direct result of his death the implementation of the 9 Line reporting process among other things has been implemented.

## Everyone needs to think about

- What will we do if someone gets hurt?
- How will we get them out of here?
- How long will it take to get them to the hospital?

It amazes me how often I find myself thinking how I am going to accomplish these issues. It all looks good on paper, but in reality not only does the team policy need to be dialed in but the personnel on the line must be ready with quality plans to get this person off the line. Remember air support may be grounded for a number of reasons. Getting someone off the hill is a huge undertaking that could take multiple crews and many hours to carry out. The only way that the victim will have a chance is for the crews to be prepared with a plan in place, prior to emergency. Please take the time to discuss this throughout the day as you move through your divisions.

**Rick Bertram SOF2 805-471-8076**

**Tom Zeulner SOF2 805-440-5252**

**Curt Schwarm SOF2 t 805-620-2561**

## REM Team

If there is an injury, getting to this point in a rescue effort is dependent on your preparation. If you are not prepared with plans and options the golden hour will be difficult to meet if not impossible. Train like you fight and fight like you train.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the rx and tx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

**Soberanes Fire  
Human Resource Message  
October 2, 2016**

**ATTITUDE**

Attitude is more important than facts.

It is more important than the past, than education, than money, than circumstances, than failures, than successes, than what other people think or say or do.

It is more important than appearance, giftedness or skill.

It will make or break a company...a church...a home.

The remarkable thing is we have choice every day regarding the attitude we will embrace for that day.

We cannot change the inevitable.

The only thing we can do is to play on the one string we have, and that is our attitude.

*If I am not for myself, who will be for me? If I am not for others, what am I?  
And if not now, when?                      -Hillel-*
