### **\*\* Warmer and Drier – Limited RH Recovery...Possibly Dropping Overnight \*\***

**Weather Discussion:** High pressure aloft continues to build over California, with very warm and dry conditions the next few days. Very dry air will slowly sink over the next couple days and likely expose ridges to extremely dry conditions overnight, but with generally light winds. **Expect poor to no ridgetop/upper slope RH recovery the next few nights...lowest RH could be in AM.** Little change expected in this pattern until Sunday, when a surge of S-SW winds up the coast may bring return to onshore flow and cooler temperatures.

## WEATHER FORECAST for Today:

	Ridgetops / Upper Slope	Valleys / Lower Slopes
<b>Weather</b>	Sunny	Sunny
<b>Highs</b>	72 – 80 ( <i>up 5-8</i> )	82 – 90 ( <i>up 5-8</i> )
<b>Min RH</b>	10 – 20% ( <i>down 5-10%</i> )	10 – 15% ( <i>down 2-4%</i> )
<b>20 ft Winds</b>	Winds NE 5-8 mph with gusts up to 15 mph, decreasing during the afternoon	Upslope winds 3-5 mph becoming up-valley 5-8 mph with afternoon gusts 12-16 mph
	Coastal ridge becoming SW 4-7 mph with afternoon gusts 10-15 mph	E-NE winds 8-12 gusting 15-20 mph lower elevations in Arroyo Seco and Willow Creek
	Coastal/Molera – NNW 5-8 mph... afternoon increasing 10 mph gusting 15 mph	

**Marine Layer:** No marine layer

**Haines:** 4

**WEATHER FORECAST for Tonight:** Mainly clear; remaining very dry on ridgetops with little to no RH recovery, or even lower overnight. RH lowering to 5-10% upper slopes and ridges...otherwise, Max RH 30-45%. Lows mainly in the 50s, except 60-65 ridges. Down-drainage winds 2-5 mph.

## OUTLOOK for Saturday:

<b>Weather</b>	Sunny. Warm and very dry except along immediate coast.	
<b>Highs/Lows</b>	Coast: 65-75° Ridges: 77-85° Valleys: 85-93°	Lows 55-65°...except 65-70° ridges.
<b>Min/Max RH</b>	Min: 5-10% (during AM on ridges), except 35-45% immediate coast.	Max: 15-20% ridges (during PM). 25-40% valleys and 55-75% coast.
<b>20 ft Winds</b>	Upslope winds 3-5 mph becoming up-valley 5-8 mph with afternoon gusts 12-16 mph. E-NE winds 8-12 gusting 15-20 mph lower elevations in Arroyo Seco and Willow Creek.	
	Coastal/Molera – E 2-5 mph early, becoming SW 4-8 mph with gusts to 15 mph by midday.	

**EXTENDED FORECAST for Sunday through Wednesday:** Sunday could see the return of stronger SW winds along the coast, with 15-25 mph gusts. Inland areas will remain hot Sunday with valley temps reaching into the 90s. The onshore flow should allow more seasonable temperatures and humidity early next week as the upper ridge breaks down and onshore flow allows the marine layer to return and deepen.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 75	<b>TYPE OF FIRE</b> Wildfire
<b>FIRE NAME:</b> Soberanes Fire	<b>OPERATIONAL PERIOD</b> 10-7-2016 24 HOUR SHIFT
<b>DATE ISSUED</b> 10-6-2016	<b>TIME ISSUED</b> 1700 HOURS
<b>UNIT</b> CA-BEU-003422	<b>SIGNED</b> IS/ <i>Joshi Lichamer</i> FBAN (T) 

### INPUTS

\*\*\*Review Weather Forecast for details\*\*\*

*Warmer and drier. Limited RH recovery. Gusty winds.*

### FIRE BEHAVIOR

#### GENERAL

Current fuel conditions will support active fire spread. Resources responding to new initial attack or fire outside containment lines should expect resistance to control. Live fuel moistures remain extremely low due to drought conditions and will take time to fully recover. Predicted ERC 71 (90<sup>th</sup> percentile), BI 63.

#### Optimal Alignment - Peak Burning Conditions

**POI = 85 - 90%**    **Spotting Distance=** up to ½ Mile.    **ROS** 100 + ch/h    **Fine Dead Fuel Moisture = 3 %**

#### LOCAL THRESHOLDS – WATCH OUTS

Coastal Sage Scrub fuel, primarily chamise and button brush, have seasonally low live fuel moisture for this time of year. Fire continues to burn in areas burned by both the 1999 Kirk and 2008 Basin Fires, and further south in fuels burned only once by the 2008 Basin fire. Snags, skeleton brush and heavy downed fuel are abundant

Combinations of any of these threshold factors can greatly increase fire behavior:

<b>Thresholds:</b>	<b>20' wind Over 7mph</b>	<b>RH Less Than 17%</b>	<b>Temperatures Over 98°</b>	<b>10hr fuel Less than 6%</b>
--------------------	-------------------------------	-----------------------------	----------------------------------	-----------------------------------

### SPECIFIC

- Heavy fuels will continue to burn out and may be problematic where close to the fires edge. New smokes will likely continue to be detected throughout the fire perimeter.
- Areas of concern remain remote and inaccessible terrain on the south end of the fire.

### AIR OPERATIONS

Gusty afternoon winds possible over the ridges.

### SAFETY

There are five characteristics of High Reliability Organizations that have been identified as responsible for the "mindfulness" that keeps them working well when facing unexpected situations:

Preoccupation with failure  
Reluctance to simplify interpretations  
Sensitivity to operations  
Commitment to resilience  
Deference to expertise

# Soberanes Fire – Safety Message

**Safety first, last and always!**

SINCIDENT #CA-BEU-003422

DATE:10.7.16

TIME: 0700-1900

## Major Hazards

- **Traffic Hazards and Driving**
- **Complacency**
- **Water Tender Extraction Project off of North Coast Ridge Road**
- **Hazard Trees in Fire area and Weakened Trees in both Toro and Rana camps**
- **Working around Heavy Equipment in the suppression repair groups**

## 6 Minutes for Safety- Aviation Communications

Discuss with your crew the following information in terms of effective communication with aircraft:

- \*Establish an air-to ground frequency on the fire; make sure everyone knows what it is.
- \*Avoid switching frequencies in middle of an operational period.
- \*Aviation communications should be clear, concise, short and to the point.
- \*Use standard terminology that can be understood by all people you are talking to. Don't use local slang.
- \*Know what you want to say before you key the microphone. Don't think and talk at the same time.
- \*Identify who you want to talk to by the call sign and identify yourself in every transmission.
- \*If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need the new frequency transfer to that frequency.
- \*When giving ground descriptions, describe the location as if you are viewing the location from the direction an aircraft would be traveling from.
- \*Use easily understandable directions, such as north, south, east, west, positions on a clock, left 20 degrees, right 45 degrees, etc.
- \*When giving directions, always give them in relation to the pilot's perspective.

## Water Tender Extraction Project on DIV UU

- Conduct thorough briefing for all personnel involved (inside rear cover IRPG).
- Ensure Lookouts, Communications, Escape Routes and Safety Zones in place.
- Remove any ignition sources prior to extraction.
- Keep coolant, fuels and oil out of the environment.
- Only qualified, private riggers set the hauling system.
- Keep all incident personnel 500 feet from scene while hauling.
- During backhaul with helicopter follow IRPG page 52-55.
- No unessential personnel in area allowed.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the tx and rx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only). Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

## Suppression Repair Treatments

These Suppression Repair Treatments are to be used in conjunction with the Soberanes Suppression Repair Treatment Map.

### Dozer Line/ Firebreak

- Use small dozer and/or excavator to rehab line
- Pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak

### Wilderness Dozer Line:

- Use small dozer and/or excavator to rehab line
- When line cut through brush: pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed

### Non Wilderness Dozer Line Repair:

- If dozer line was a road before fire then maintain roadbed and drainage. Pull in berms and brush along roadside.
- If road was not present before fire then water bar, pull in berms, and disperse cut brush across fire line.

### Hand Crew

- Use hand crews to complete rehab work
- Move displaced native material (soil & duff) back onto fire line
- Pull back brush and berms and spread over the width of break
- Leave tops of felled trees attached, this will appear more natural
- Cut water bars diagonal to fire line, where natural drains occur and construct as natural as possible. If possible, at natural drain direct outlet of water into a clump of brush or rocks
- For dozer line: slash and water bars will be hand constructed

#### Trail Maintenance:

- Use small dozer (e.g., D5) and/or excavator to rehab line
- Pull back brush, berms and rocks
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%).
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak.
- Reestablish hiking trail along road prism
- Repair cross drains where segments of trail have been affected by suppression activities

#### Jeep Trail Repair:
