Weather Discussion: Upper ridge breaks down with cooler weather taking over this week. Upcoming frontal boundaries expected late this week and weekend with a moistening atmosphere and possibly some wetting rain. Expect the minimal marine layer to thicken this week and expand into the Salinas Valley. Low RH will still occur Monday and Tuesday, but expect improved overnight recovery. The best chance for more significant rain may occur late next Sunday and into next Monday.

WEATHER FORECAST for Today (Monday):

	Ridgetops / Upper Slope	Valleys / Lower Slopes
Weather	Partly cloudy (Mid-High clouds)	Marine stratus at Toro through 0900-1000 Then partly cloudy (mid to high clouds)
Highs	68 – 72° (down 3-5°)	Inland: 80 – 85° (down 5-8°) Coast: 56 – 62° (down 3-5°)
Min RH	16 – 22% (up 4-7%)	Inland: 13 – 17% (up 4-7%) Coast: 45 – 65% (up 5-10%)
20 ft Winds	E-SE 3-7 mph in the morning, shifting SE-SW 8-13 mph around 1100. Afternoon gusts 15-20 mph.	Upslope 2-6 mph, becoming Upcanyon 5-10 mph with gusts to 15 mph in the afternoon.
	Coastal/Molera – SE 3-6 mph, then S 10-15 mph gusting to 20 mph by late morning.	

Marine Layer: 500 to 1000 ft Mean Sea Level (MSL).

Haines: 4

WEATHER FORECAST for Tonight: Mainly clear interior fire area with marine layer clouds filling in over Toro ICP. Better recovery expected in and above thermal belts with moderate recovery in drainages. Patchy fog developing along immediate coastline. RH 30-35% in and above thermal belts. Interior valley RH recovers to 40-60%; much higher along coast. Winds SE 6-12 mph with gusts 15-20 mph, becoming down-drainage 2-5 mph by 2000 below midslope. Lows in the 40s, except 50-55 above thermal belts.

OUTLOOK for Tuesday:

Weather	Cooler and partly cloudy interior. Morning coastal stratus into Toro ICP, and possibly into Rana.	
Temps	Highs: 58-62 coast, 65-70 ridges, 76-82 inland	Lows: 45-55°
RH	Min: 20-25%, except 55-65% near coast.	Max: 40-65%, except 90% near coast.
20 ft Winds	E-SE 2-5 mph early, becoming SW-NW 6-10 mph with gusts to 15 mph in the afternoon.	
	Coastal/Molera – SE 3-6 mph, then S-SW 10 mph gusting to 15 mph by late morning.	

EXTENDED OUTLOOK (Wednesday through Next Weekend): Increasing chances for rain going into next weekend. Steady cooling trend will continue through late in the week, with gradual humidity increases. Winds will become more westerly as the Pacific jet stream slowly sinks farther south toward Central California. A slight chance of rain exists as early as Friday, with better chances developing late next weekend into next Monday. Details remain highly uncertain, so stay tuned.

INPUTS

Review Weather Forecast for details
 Low RH during the day. Improved RH recovery overnight. Winds gusty and variable.

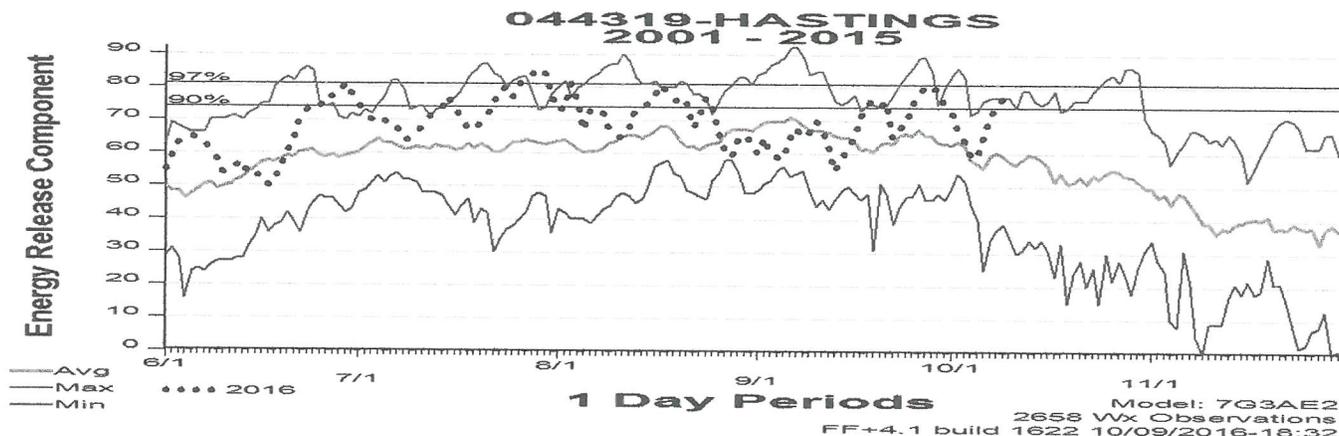

FIRE BEHAVIOR

GENERAL

Current fuel conditions will support active fire spread in areas of optimal alignment. Variable south winds will impact areas previously sheltered during the northerly wind events of last week. Resources responding to new initial attack or fire outside containment lines should expect some resistance to control, however, any impacts would likely be of short duration due to improving overnight RH recoveries. Live fuel moistures remain extremely low due to drought conditions and will take time to fully recover. Forecasted ERC 77, BI 86.

Optimal Alignment - Peak Burning Conditions

POI = 85 - 90% Spotting Distance= up to 1/2 Mile. ROS 80 + ch/h Fine Dead Fuel Moisture = 3 %

LOCAL THRESHOLDS - WATCH OUTS

Combinations of any of these threshold factors can greatly increase fire behavior:

Thresholds:	20' wind Over 7mph	RH Less Than 17%	Temperatures Over 98°	10hr fuel Less than 6%
-------------	-----------------------	---------------------	--------------------------	---------------------------

SPECIFIC

- Heavy fuels will continue to burn out and may be problematic where close to the fires edge. New smokes will likely continue to be detected throughout the fire perimeter. Creeping and smoldering can be expected within containment lines.
- Areas of concern remain in remote and inaccessible terrain.

AIR OPERATIONS

Morning marine layer may impact aviation operations.

SAFETY

The motive power of the safety-first movement is a realization of the fact that lives and limbs need not be sacrificed to any desired result... ~The Anode by the Bureau of Safety of the Anaconda Copper Mining Co., March 1917

Columbus Day
Holiday today!

6 Minutes for Safety – Lookouts

Lookouts are often better situated to notice the cumulative changes of fire behavior. Fire Order #5 says "Post lookouts when there is possible danger." Should you utilize lookouts at all times? **Lookouts should be posted at all times.**

What are you looking for when you are selecting a lookout location? **Choose a good vantage point, preferably with a good overview of the entire area where firefighters are located, including escape routes and safety zones. Never rely exclusively on aircraft as your lookout.**

What are the desired qualities, capabilities, knowledge, and responsibilities of a lookout person?

Experienced firefighter. Solid knowledge of fire behavior and ability to recognize and monitor other environmental hazards. Knowledge of crew locations, escape route, safety zones and trigger points.

Other qualities. **Good communicator that keeps the crew advised of fire behavior changes, tracks weather trends and relays the information, informs crew of work progress and updates from the latest strategy and tactical briefings.**

Other qualities. **Monitors and accounts for all individuals within his/her assigned area at all times, and will notify others if breaks are needed.**

What is the necessary equipment for a lookout? **PPE, radio with extra batteries, compass, binoculars, belt weather kit, IAP, map, food, water and watch.**

Driving reminders!

The sun is blinding early morning and late in afternoon.

It helps to keep your windshield clean to reduce glare.

Check and clean your mirrors on a regular basis.

Driving on Hwy 1 is very crazy these days, people want to speed and pass you if you are going the speed limit, pull over when you can and let the craziness pass.

Potential for bicyclists on Carmel Valley Road today.

Make your vehicle distraction free, clear clutter from your dash, secure portable radios, etc. and don't let something loose in your vehicle cause you to crash.

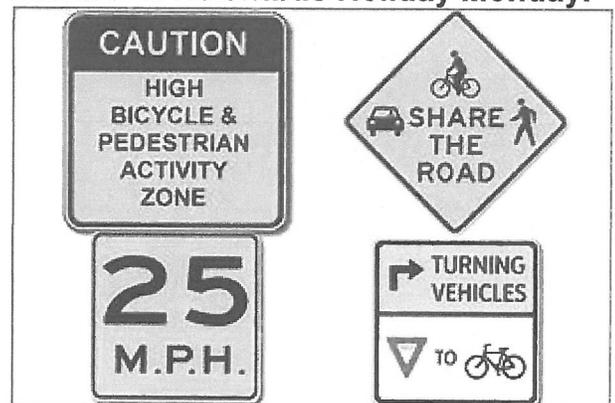

Don't drive distracted, no texting (pull over), cell calls on hands free only or pull over. It's just not worth it.

Rick Bertram-Toro SOF2 805-471-8076

Tom Zeulner-Toro SOF2 805-440-5252

Ron Garcia-Rana SOF2 559-392-1045

Watch out for bicyclists on Carmel Valley Road this Columbus Holiday Monday.

INCIDENT RISK ANALYSIS SOBERANES FIRE CA-BEU-003422 (ICS 215a) Day Shift

DIV/BR	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	TRAFFIC HAZARDS AND DRIVING	<ul style="list-style-type: none"> • Use caution while driving on all incident roads, nightly moisture/fog may create slick roads • Drive defensively! Expect the unexpected around every curve. • Watch for other vehicles, distracted drivers, rocks and debris on the roadway. • Beware of heavy local traffic and bicycles on Carmel Valley Road, Hwy. 68 and Hwy. 1. • Roads are narrow with steep drop-offs. • Flagging on the side of North Coast Ridge road indicates a false berm or soft shoulder created by heavy equipment.
ALL	WEATHER AND FIRE BEHAVIOR	<ul style="list-style-type: none"> • Cooler temps over the next few days and increase in humidity. • Winds will test weakened trees, stay alert around snags • Stay hydrated. Monitor resources for heat related illness. • Communicate any observed changes in weather and fire behavior. • Maintain adequate escape routes and safety zones. Set trigger points. • Expect the unexpected with drought stricken fuels at critically low fuel moistures. • Historical trends indicate changes in the fire environment support large fire growth.
DIV UU	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel involved (inside rear cover IRPG). • Ensure Lookouts, Communications, Escape Routes and Safety Zones in place. • Establish adequate safety zones (IRPG p.8) and escape routes. • Use Downhill Line Checklist (IRPG p. 9). • Use "Look Up, Look Down, Look Around" procedures (IRPG p. 3-4)
ALL	MOP-UP/REHAB	<ul style="list-style-type: none"> • Evaluate areas for hazard trees and locate stump holes for avoidance. • Monitor fatigue; adjust shifts to increase rest where appropriate. • Provide motivation to workers to maintain situational awareness and avoid complacency. • Evaluate mop up distances against what is safe and necessary. • Review and follow "Look Up, Look Down, Look Around" procedures (IRPG p. 3-4). • Survey your work area. Assess the hazards and implement appropriate mitigations.
ALL	COMMUNICATIONS	<ul style="list-style-type: none"> • Share your Situational Awareness with those who also have a need. • Radio Communications may be poor in some areas. Use human repeaters. • Ensure all personnel are familiar with the incident communications plan. The Soberanes Fire is using 2 different groups. Ensure you are using the proper one. • Don't be afraid to over communicate. • Ensure everyone gets a proper and thorough briefing. • Know who you are working for.
ALL	AVIATION OPERATIONS	<ul style="list-style-type: none"> • Use risk analysis to determine if any given flight is necessary. • Use air to ground tactical frequency when assigned a specific aircraft. • Use air to ground command frequency to communicate with air attack. • Use concise statements & clock directions when directing aircraft IRPG pg. 57. • Review and follow "Aviation Watch-Out Situations" on page 44, IRPG. • Remember visibility changes minute by minute.
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • Ensure communications are established with operators. • Use hand signals if other communications are unavailable. • Maintain a 50'-100' exclusion area around equipment. • When in timber, increase distance to 2.5 times the height of the trees. • Never work below or behind heavy equipment.
ALL	ENVIRONMENTAL HAZARDS	<ul style="list-style-type: none"> • Keep alert for wildlife, cattle, rattlesnakes, bees, and insects. • Watch footing and hand placement around rocks. • Watch for snags, don't rest under oaks, even green ones. They're falling • Ensure all personnel can identify poison oak in work and camp areas. • Identify employees who are highly receptive to poison oak and minimize their exposure. • Utilize line medics at the earliest appearance of allergic reactions.
ALL	Spike Camps	<ul style="list-style-type: none"> • Watch for dead or drought damaged trees in sleeping areas • Maintain hygiene to avoid camp crud • Sleep only in designated areas • Drive slowly and watch for fellow firefighters while driving (5mph in camp). • Ensure you get a full briefing daily • Check in when off the line to maintain accountability

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Kx and Lx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

Suppression Repair Treatments

These Suppression Repair Treatments are to be used in conjunction with the Soberanes Suppression Repair Treatment Map.

Dozer Line/ Firebreak

- Use small dozer and/or excavator to rehab line
- Pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak

Wilderness Dozer Line:

- Use small dozer and/or excavator to rehab line
- When line cut through brush: pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed

Non Wilderness Dozer Line Repair:

- If dozer line was a road before fire then maintain roadbed and drainage. Pull in berms and brush along roadside.
- If road was not present before fire then water bar, pull in berms, and disperse cut brush across fire line.

Hand Crew

- Use hand crews to complete rehab work
- Move displaced native material (soil & duff) back onto fire line
- Pull back brush and berms and spread over the width of break
- Leave tops of felled trees attached, this will appear more natural
- Cut water bars diagonal to fire line, where natural drains occur and construct as natural as possible. If possible, at natural drain direct outlet of water into a clump of brush or rocks
- For dozer line: slash and water bars will be hand constructed

Trail Maintenance:

- Use small dozer (e.g., D5) and/or excavator to rehab line
- Pull back brush, berms and rocks
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%).
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak.
- Reestablish hiking trail along road prism
- Repair cross drains where segments of trail have been affected by suppression activities

Jeep Trail Repair:

- Reestablish drainage
- Pull back brush, berms and rocks, and spread over width of jeep road
- Install tank-trap (as per indicated by READ)

Road Maintenance:

- Disperse or chip cut brush away from roadsides
- Maintain pre-existing road drainage
