FORECAST ISSUED: 1900 Monday 10/10/16

***** Rain looking increasingly likely by the end of this weekend *****

Weather Discussion: Temperatures and humidity will continue to moderate today, as very weak low pressure off the coast continues to deepen the marine layer. General winds will be light today, tending SE in the morning and SW in the afternoon. With the absence of a strong general wind, seabreezes and/or up-canyon winds will develop by midday then dominate through afternoon. Ridgetop and coastal winds will take on more of a NW component Wednesday and Thursday, otherwise little change is expected through Thursday.

WEATHER FORECAST for Today (Tuesday, October 11):

	Ridgetops / Upper Slopes	Valleys / Lower Slopes
Weather	Partly Cloudy.	Partly Cloudy.
Highs	68 - 74° (down 1-3°)	Inland: 78 - 84° (down 1-3°) Coast: 57 - 65° (little change)
Min RH	18 - 26% (up 0-5%)	Inland: 15 - 25% (little change) Coast: 60 - 80% (little change)
20 ft Winds	E-SE 3-7 mph early, becoming SW 5-10 mph with gusts to 20 mph in the afternoon.	Upslope 2-6 mph, becoming Upcanyon 5-10 mph with gusts to 15 mph in the afternoon.

Marine Layer: 2,000' to 2,500' MSL.

Haines: 3

WEATHER FORECAST for Tonight: Partly cloudy. Coastal low clouds increasing and spreading into the coastal valleys overnight. Lows mainly in the 40s. Max RH 30-45% above thermal belts and/or marine layer; otherwise 70% or higher. Winds generally down-drainage 5 mph or less.

OUTLOOK for Wednesday, October 12:

Weather	Partly cloudy. Low clouds clearing from the coastal valleys by 1100.	
Temps	Highs: 57-65° coast, 65-72° ridges, 76-82° inland valleys.	Lows: Mainly in the 40s
RH	Min: 20-30%, except 60-80% coast.	Max: 40-60% above thermal belts, otherwise 70% or greater.
20 ft Winds	E-NE 2-5 mph early, becoming up-canyon 5-10 mph with afternoon gusts 15-20 mph. Ridgetop winds E-NE 3-7 mph until 0900, becoming NW 5-10 mph with gusts to 20 mph.	

EXTENDED OUTLOOK (starting Thursday): Slightly warmer and drier conditions are expected Thursday as warm air rushes out ahead of an incoming Pacific frontal system. This system still looks on track to bring widespread rain to Northern and Central California Friday, possibly even a wetting rain to the Soberanes Fire. A second system will bring another decent chance for rain Saturday night or Sunday. Amounts are still uncertain, but could be anywhere from barely enough to wet the ground to around an inch depending on where the Pacific jet stream lines up. Given that this system will be carrying remnant moisture from a West Pacific typhoon, odds are looking pretty good that a wetting rain will occur on at least a portion of the fire by the end of next weekend. Stay tuned.

INPUTS

Review Weather Forecast for details
 Increasing RH during the day. Improved RH recovery overnight. Winds moderating.

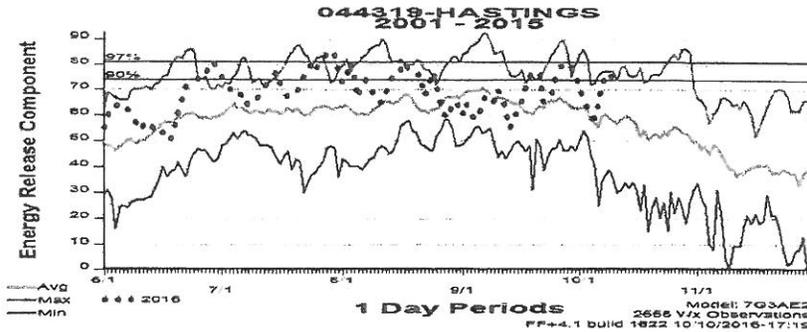

FIRE BEHAVIOR

GENERAL

Current fuel conditions will support fire spread in areas of optimal alignment. Impacts from wind will moderate. Resources responding to new initial attack or fire outside containment lines can expect minimal resistance to control due to increased RH and reduced winds. Live fuel moistures remain extremely low due to drought conditions and will take time to fully recover. Predicted ERC 69 BI 64.

Optimal Alignment - Peak Burning Conditions

POI = 70 Spotting Distance= up to 1/4 Mile. ROS 40 + ch/h Fine Dead Fuel Moisture = 4 %

LOCAL THRESHOLDS – WATCH OUTS

Combinations of any of these threshold factors can greatly increase fire behavior:

Thresholds:	20' wind Over 7mph	RH Less Than 17%	Temperatures Over 98°	10hr fuel Less than 6%
-------------	-----------------------	---------------------	--------------------------	---------------------------

SPECIFIC

- Heavy fuels will continue to burn out and may be problematic where close to the fires edge. Detection of new smokes will moderate with improved weather conditions. Creeping and smoldering can be expected.
- Areas of concern remain in remote and inaccessible terrain.

AIR OPERATIONS

Morning marine layer may impact aviation operations.

SAFETY

Objective Hazards

Objective hazards are a natural part of the environment. They cannot be eliminated and either one must not go into the environment where they exist or adhere to a procedure where safety from the hazard is assured.

Major Hazards

- *Hazard Trees in Fire area and Weakened Trees in both Toro and Rana camps*
- *Working around Heavy Equipment in the suppression repair groups and road group*

Leadership is defined as the act of influencing people in order to achieve a result. The leadership environment is made up of critical elements that a successful leader must consider in planning for effective action. Those critical elements are:

YOU - the leader, who is ultimately responsible for all action and results. **YOUR PEOPLE** - those that you are responsible for.

SITUATION - comprised of the many unique variables that influence a leader's decision such as objectives, conditions, resources available, organizational influences, and others affected by the action.

CONSEQUENCES - the short and long-term effects of your actions.

Leaders constantly assess the elements of the leadership environment and adapt accordingly. Successful leaders understand the interplay of these variables and demonstrate flexibility in selecting appropriate leadership tools and techniques as a situation changes.

Stay Focused

We are all almost to the finish line and with that the mind starts to wander. The problem with that is it increases your chance of injury or a driving accident. So please do your best to focus on your job and task for the day. Give clear instructions and make sure they are understood. Watch out for each others safety at all times and never let your guard down, in any environment.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the KX and TX reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

Suppression Repair Treatments

These Suppression Repair Treatments are to be used in conjunction with the Soberanes Suppression Repair Treatment Map.

Dozer Line/ Firebreak

- Use small dozer and/or excavator to rehab line
- Pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak

Wilderness Dozer Line:

- Use small dozer and/or excavator to rehab line
- When line cut through brush: pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed

Non Wilderness Dozer Line Repair:

- If dozer line was a road before fire then maintain roadbed and drainage. Pull in berms and brush along roadside.
- If road was not present before fire then water bar, pull in berms, and disperse cut brush across fire line.

Hand Crew

- Use hand crews to complete rehab work
- Move displaced native material (soil & duff) back onto fire line
- Pull back brush and berms and spread over the width of break
- Leave tops of felled trees attached, this will appear more natural
- Cut water bars diagonal to fire line, where natural drains occur and construct as natural as possible. If possible, at natural drain direct outlet of water into a clump of brush or rocks
- For dozer line: slash and water bars will be hand constructed

Trail Maintenance:

- Use small dozer (e.g., D5) and/or excavator to rehab line
- Pull back brush, berms and rocks
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%).
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak.
- Reestablish hiking trail along road prism
- Repair cross drains where segments of trail have been affected by suppression activities

Jeep Trail Repair:

- Reestablish drainage
- Pull back brush, berms and rocks, and spread over width of jeep road
- Install tank-trap (as per indicated by READ)

Road Maintenance:

- Disperse or chip cut brush away from roadsides
- Maintain pre-existing road drainage

Repair Declined

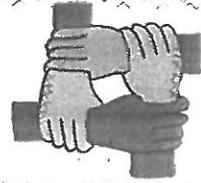

- Private landowner has indicated that no repair should occur
- Check with Repair Group READS before travelling through this area

Department of Defense Dozer Line:

- No suppression repair
