Soberanes– Safety Message

INCIDENT: Soberanes Fire	DATE: 10-15-16 TIME: 0700 – 1900

Situational Awareness:

Start the day with a briefing and re-brief during the day as the job changes. Use all the assessment guides to develop and maintain Situational Awareness. Constantly re-evaluate your situation throughout the day. Use the time tested process of "Looking Up, Down, and All Around", and the other assessment materials from the Incident Response Pocket Guide.

WATCH-OUTS

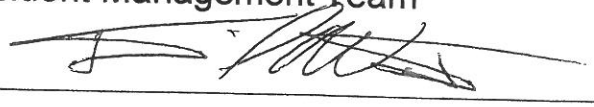
- **Communications** – With the changes in the work areas, ensure that communications exist. Will a human repeater be necessary? Are you cloned to the right group you are working in?
- **Vehicle Driving** - Roads are steep and narrow with many blind corners. Drive slowly, defensively, with your lights on, and stay on your side of the road! **WATCH OUT** for commercial, private, and other vehicles that commonly drive faster than we do.
- **Medical Plan** - Know where assigned medical personnel are located. Know in advance the request process in the Medical Plan. Ensure positive communications with the ICP.
- **Danger/Hazard Trees** - Continue to evaluate the areas around and under all trees. Use the IRPG guidelines on page 22. Minimize the exposure, and exposure time.
- **Rain / Wind** – Reduce driving speeds on wet, slick roads. Watch out for rock and mudslides. Limit driving exposure on muddy roads.

Fight Complacency

- One common reason for firefighter injury in the latter stages of a fire is when the firefighter throws her/his mind into neutral and doesn't think about the work they are doing. They are not thinking about how to do the job right, but just how to get the job done so they can just get home. Couple this with fatigue, and you really have a "**WATCHOUT**."
- There's a difference in between **just** getting the job done, versus getting the job done when **MENTALLY ENGAGED**.

So with that, keep your mind engaged and attentive to the task. Continually ask yourself if you are doing the job safely, the way you were trained. Keep an eye on your co-workers too. If you see them doing something that is unsafe, **YOU NEED TO SAY SOMETHING** immediately about the unsafe act.

South Central Sierra Incident Management Team



INCIDENT RISK ANALYSIS SOBERANES FIRE CA-BEU-003422 (ICS 215a) Day Shift

DIV/BR	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	TRAFFIC HAZARDS AND DRIVING	• Use caution while driving on all incident roads, nightly moisture\fog may create slick roads • Drive defensively! Expect the unexpected around every curve. • Watch for other vehicles, distracted drivers, rocks and debris on the roadway. • Beware of heavy local traffic and **bicycles** on Carmel Valley Road, Hwy. 68 and Hwy. 1. • Roads are narrow with steep drop-offs. • Flagging on the side of North Coast Ridge road indicates a false berm or soft shoulder created by heavy equipment.
ALL	COMPLACENCY	• Motivate each other with positive feedback. • Maintain a positive attitude around fellow workers at all times. • Focus on your job during work hours. • Call, text or email your family when off the fireline and enjoy that time. • Treat your crewmembers like family and watch out for their safety at all times • Review your IRPG during down times to stay fresh.
ALL	WEATHER WIND / RAIN	• Snags/Fire weaken trees. • Wet slick road surface. • Rolling Rocks/ Mud Slides. • Dirt Roads- Slick, muddy. Loss of traction. • Potential Flooding. • Decrease in visibility while driving.
ALL	MOP-UP / REHAB	• Evaluate areas for hazard trees and locate stump holes for avoidance. • Monitor fatigue; adjust shifts to increase rest where appropriate. • Provide motivation to workers to maintain situational awareness and avoid complacency. • Evaluate mop up distances against what is safe and necessary. • Review and follow "Look Up, Look Down, Look Around" procedures (IRPG p. 3-4). • Survey your work area. Assess the hazards and implement appropriate mitigations.
ALL	COMMUNICATIONS	• Share your Situational Awareness with those who also have a need. • Radio Communications may be poor in some areas. Use human repeaters. • Ensure all personnel are familiar with the incident communications plan. The Soberanes Fire is using 2 different groups. Ensure you are using the proper one. • Don't be afraid to over communicate. • Ensure everyone gets a proper and thorough briefing. • Know who you are working for.
ALL	AVIATION OPERATIONS	• Use risk analysis to determine if any given flight is necessary. • Use air to ground tactical frequency when assigned a specific aircraft. • Use air to ground command frequency to communicate with air attack. • Use concise statements & clock directions when directing aircraft IRPG pg. 57. • Review and follow "Aviation Watch-Out Situations" on page 44, IRPG. • Remember visibility changes minute by minute.
ALL	HEAVY EQUIPMENT OPERATIONS	• Ensure communications are established with operators. • Use hand signals if other communications are unavailable. • Maintain a 50'-100' exclusion area around equipment. • When in timber, increase distance to 2.5 times the height of the trees. • Never work below or behind heavy equipment.
ALL	ENVIRONMENTAL HAZARDS	• Keep alert for wildlife, cattle, rattlesnakes, bees, and insects. • Watch footing and hand placement around rocks. • Watch for snags, don't rest under oaks, even green ones. They're falling • Ensure all personnel can identify poison oak in work and camp areas. • Identify employees who are highly receptive to poison oak and minimize their exposure. • Utilize line medics at the earliest appearance of allergic reactions.
ALL	CAMPS	• Watch for dead or drought damaged trees in sleeping areas • Maintain hygiene to avoid camp crud • Sleep only in designated areas • Drive slowly and watch for fellow firefighters while driving (5mph in camp). • Ensure you get a full briefing daily • Check in when off the line to maintain accountability

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

Suppression Repair Treatments

These Suppression Repair Treatments are to be used in conjunction with the Soberanes Suppression Repair Treatment Map.

Dozer Line/ Firebreak

- Use small dozer and/or excavator to rehab line
- Pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak

Wilderness Dozer Line:

- Use small dozer and/or excavator to rehab line
- When line cut through brush: pull back brush, berms and rocks, and spread over width of fire line
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%)
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed

Non Wilderness Dozer Line Repair:

- If dozer line was a road before fire then maintain roadbed and drainage. Pull in berms and brush along roadside.
- If road was not present before fire then water bar, pull in berms, and disperse cut brush across fire line.

Hand Crew

- Use hand crews to complete rehab work
- Move displaced native material (soil & duff) back onto fire line
- Pull back brush and berms and spread over the width of break
- Leave tops of felled trees attached, this will appear more natural
- Cut water bars diagonal to fire line, where natural drains occur and construct as natural as possible. If possible, at natural drain direct outlet of water into a clump of brush or rocks
- For dozer line: slash and water bars will be hand constructed

Trail Maintenance:

- Use small dozer (e.g., D5) and/or excavator to rehab line
- Pull back brush, berms and rocks
- When line cut through grassland: pull back berms and rocks, and spread over width of fire line
- Back blade berms perpendicular to fire line on moderate grades (0-10%).
- Install water bars/dips on all dozer lines over 10% slope (as per indicated by READ)
- Where grade is too steep or line too narrow for effective dozer work, slash and water bars will be hand constructed
- Machine and hand pile woody material into small burn-piles (no larger than 8' tall x 10' diameter covered with Clean Burn Craft Paper); placement determined by READ OR chip wood/brushy materials and disperse evenly along firebreak.
- Reestablish hiking trail along road prism
- Repair cross drains where segments of trail have been affected by suppression activities

Jeep Trail Repair:

- Reestablish drainage
- Pull back brush, berms and rocks, and spread over width of jeep road
- Install tank-trap (as per indicated by READ)

Road Maintenance:

- Disperse or chip cut brush away from roadsides
- Maintain pre-existing road drainage
