# FIRE WEATHER FORECAST

FORECAST NO. 2

NAME OF FIRE: Border 3 PREDICTION FOR: Thursday, June 23, 2016

UNIT: Cal Fire Monte Vista Unit

TIME AND DATE

FORECAST ISSUED: 2000 Wednesday 06/22/16

SIGNED:   
Jim Dudley/ Incident Meteorologist

**WEATHER DISCUSSION:** High pressure will weaken over the region Thursday as an area of low pressure moves across the Pacific Northwest. Temperatures and relative humidity will show little day to day change Thursday and Friday. Humidity will show good overnight recovery with minimum humidity falling into the teens. Winds will remain light downslope overnight and early morning with upslope and westerly winds developing by late morning each day. On Friday night a dry frontal system will move through the region with a brief change to a light easterly wind regime on Saturday.

## INPUTS

### WEATHER SUMMARY

Mostly sunny, clear overnight

**MAX Temperatures:** 87 - 92 **Relative Humidity:** 15 - 20%

Eye Level Winds: Variable under 3 mph through 0900, then W 3 – 8 mph with gusts to 18 mph after 1 PM.

Overnight – Downslope/Down canyon 1 – 4 MPH

The SOLAR RADIATION has significantly influenced increased levels of fire activity.

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

The initial burning periods had high levels of fire activity, aided by 100° plus temperatures, single digit RH and very difficult access. Tuesday fire activity was slightly less intense with a lowered progression due to cloud and smoke coverage. Fire did churn through retardant lines and downhill fire consumption through receptive fuels was observed. During a firing operation Wednesday, increased fire intensity with short range spotting, fire whirls and active backing into the wind was observed

Fuels are 6' to 10'+ configurations of brush mixed in with new growth desert plants. There is also the presence of oak trees and some confiner. The grass fuels are mostly isolated to the flatter areas along the east flanks. The terrain is rugged with broken drainages and heavy rock/boulder influence.

#### Fire Behavior for Optimal Alignment Receptive Fuels

Fuel Type	ROS (Ft-MIN) Forward	ROS (Ft-MIN) Lateral	FL (Ft)	P(I)G
Grass Group	50 - 170	8 - 9	5 - 10	78%
High Load Shrub SH5	50 - 130	7 - 10	13 - 23	78%
Very High Load Shrub SH7	31 - 84	12 - 19	12 - 19	78%

**Higher levels of fire intensity should be expected during firing operations.**

#### SPECIFIC:

DIV A, B, C / Z, Y, W

In mop up and patrol mode. Maintain awareness as post fire hazards will begin to present.

DIV E, H, J

The fuels in these divisions are receptive to new fire growth. The unburned fuels are uniform above 6' in height with large amounts of dead fuels mixed in to the arrangements. The ground fuels will be receptive to spot fires and the ladder arrangement will carry into the canopy. Winds will eddy creating optimal alignment fire conditions with little to no warning.

#### AIR OPERATIONS:

Low level inversion should lift by 7am – Any upper level inversion should break by noon

#### SAFETY

There are multiple fire fatality and burn over sites within a few miles of the BORDER 3. The HAUSER CREEK 43' – 11 fatalities, BELL VALLEY 74' – 1 fatality, HARRIS 07' serious injuries to firefighters after a burn over.

With the extended droughts the fuel conditions are volatile, crews should expect fire/fuels to respond with higher levels of intensity more consistent with late fire season conditions.

# BORDER 3 HEALTH AND SAFETY MESSAGE

We Are ALL accountable for SAFE behaviors

**INCIDENT:** Border 3 Incident CA-MVU-014498

**DATE:** June 23, 2016 **TIME:** 0700-0700

**Major Hazards and Risks: EXPECT EXTREME FIRE BEHAVIOR—HIGH TEMPERATURES AND LOW RH—RECEPTIVE FUELS—STEEP AND ROCKY TERRAIN, NARROW ROADWAYS TO HIGHWAY DRIVING—FATIGUE!**

**Fire Behavior:** Fuels are drought stricken and are receptive to fire spread. Consider P.A.C.E and know your L.C.E.S. Don't be lulled into a false sense of security, this fire has shown it can get up and move.

**Driving:** Keep your speeds down on all roads. Watch out on loose, dusty roads, unstable shoulders and fire debris. Be alert for opposing traffic on narrow dirt roads. Use headlights when driving in reduced visibility. Park apparatus off the roadway. Wear your seatbelts!

**Fatigue:** Take frequent nutrition and hydration breaks throughout the day. Hydrate with a 2 water to 1 electrolyte drink ratio. Monitor Personnel for excessive fatigue. Critical hours for injuries and accidents is between 14:00 and 18:00 hours; be especially alert during this period of time, don't become complacent and utilize the buddy system.

**Complacency:** The strongest weapon against complacency is good leadership. Clearly communicate leader's intent, stay engaged and empower your subordinates. Motivation is the cure for complacency!

**Fire Effects:** Be alert for rolling rocks, burned out power poles, snags and hazard trees.

## Lookouts, Communication, Escape routes, Safety zones

### Planning For Medical Emergencies

Supervisors and all firefighters need to ask and be able to answer the following three questions:

- 1) **What are we going to do if someone gets hurt?**
  - Is there personnel and equipment available to assist?
- 2) **How will we get them out of here?**
  - What is your best extraction and transport method? Road, helispot, hoist? Primary plan and contingency plan in place?
- 3) **How long will it take to get them to the hospital?**
  - Will you request air or ground resources?
  - Are helicopters able to fly?

**Review your ICS 206 and know what to do in the event of a medical emergency**

### TAILGATE SAFETY

- **Accountability:** everyone checks in and everyone checks out. Supervisors know where their crews are at all times
- **Communication:** everyone knows the com-plan
- **Briefing:** everyone knows the game plan, everyone knows the contingency plan
- **Safety gear:** everyone has the appropriate safety gear and in good working condition
- **LCES:** they are clear and made known to everyone
- **Medical:** follow the medical procedures found on the ICS206 in the IAP

 John Brooks, COML, Ken Parker, COML Team 5  General Location of 25130 Highway 94, Potrero, San Diego County CA

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as it programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the KX and IX reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

# CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

## *California Drought Emergency*

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

### **Fireline personnel-** (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

### **Road Maintenance and Repair-**

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

### **Aviation Operations-**

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

### **Private Water Supplies-**

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

### **Public/ Municipal Water Supplies-**

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

### **Management and Supervision-**

- Use leaders intent and establish Water Conservation as an Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- Review this check list and brief daily.
