DAY Operational Period

October 28, 2007

0600-1800

INCIDENT OBJECTIVES	1. Incident Name Slide	2. Date Oct 27, 2007	3. Time 2200
4. Operational Period Oct 28, 2007 DAY OPERATIONAL PERIOD: 0600-1800			
5. General Control Objectives for the Incident (include alternatives) <u>MANAGEMENT OBJECTIVES</u> <ul style="list-style-type: none"> • The primary objective is to provide for firefighter and public safety throughout all incident operations. • All personnel will adhere to the 2:1 work-rest cycle. • Address suppression cost accountability by keeping fire expenditures commensurate with public and private values at risk. • Initiate and engage in structure protection without compromising the safety of firefighters, law enforcement personnel, and the public. • Provide accurate and timely information to the local communities and cooperating agencies. <u>OPERATIONAL OBJECTIVES</u> <ul style="list-style-type: none"> • Keep the fire south of Coxey Road. • Keep the fire north of the 1N09 Rd. • Keep the fire west of Bear Creek drainage. • Keep the fire east of Sheep Creek and the east fork of City Creek. <u>OPERATIONAL PRIORITIES</u> <ol style="list-style-type: none"> 1. Maintain structure protection for the communities of Running Springs, Green Valley, and Arrowbear. 2. Continue perimeter control in Divisions U and V. 3. Continue perimeter control in Branch I.

Slide		
2. Date	3. Time	
Oct. 27, 2007	2200	
4. Operational Period 10/28/07 DAY 0600-1800		
Position	Name	
5. Incident Commander and Staff		
Incident Commander	McGowan, Corley, Smith, Mellinger, Catalano	
Deputy	Dan Kleinman	
Safety Officer	Jennifer Boyd, Shelby Charley(T)	
Information Officer	Tom Efird	
Liaison Officer	Ranger Dorn	
6. Agency Representative		
Agency	Name	
Agency Administrator	FS-Jean Wade Evans/BDC Pat Denmen	
Agency Admin Rep	FS-Kurt Winchester	
Crest Forest FD	Mike Sherman	
OES	Bill Bondshu	
Cal Fire	Don Feldman	
San Bernadino Co Sheriff	Joe Catalano	
CCC	Jim Teegardin	
CHP	Rick Sanders	
7. Planning Section		
Chief	Gary Montgomery	
Deputy	Gary Risling	
Resources Unit	H. Newell, M. Fountain, A. Yanagisawa(T)	
Situation Unit	Christie Neill, Ken Bates (T)	
Demobilization Unit	John Roberts	
Training	Bill Reynolds, Olias Rivera (T)	
Fire Behavior Analyst	Kelly Martin	
Incident meteorologist	Valerie Meyers	
Resource Advisor	Gar Abbas	
Computer Tech Spec	Jim Ott	
8. Logistics Section		
Chief	Dan Turner, Rich Davis (M)	
Deputy	Jim Hogg	
Supply Unit	Dennis Bougslaugh	
Facilities Unit	Sue Zahn	
Ground Support Unit	Dave Trussell, David Corral (T)	
Communications Unit	Kody Kerwin, Scott LaRue	
Medical Unit	Mike Clemens	
Food Unit	Ricky Washington, Karl Rogge	
Security Unit	B. Willbond, J. Hilson	

9. Operations Section		
Ops Chief	Tom Hatcher, Mark von Tillow (T)	
Planning Ops	Don Smith	
a. Branch I- Division/Groups		
Branch Director	Bob Shindelar	
Deputy		
Group	Structure 1	Marc Peebles
Division	E	Craig Martin
Division	F	Jerod Delay
Division	G	Tony Davis
b. Branch II - Division/Groups		
Branch Director	Dick Kersh	
Deputy		
Group	Structure 3	John Flores
Division/Group	Structure 5	Stephen Nemore
Division/Group	H	Val Linch/Matt Lipson (T)
Division/Group	I	Thomas McKibben

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 9	TYPE OF FIRE: WILDFIRE
FIRE NAME: SLIDE FIRE	OPERATIONAL PERIOD: SUN 10/28/07 DAY SHIFT
DATE ISSUED: 10/27/07	TIME ISSUED: 2100
UNIT: SAN BERNARDINO NATIONAL FOREST	SIGNED: <i>Isl Kelly Martin - FBAN</i>

MIN RH: 18-25% **Lower than yesterday**
MAX TEMP: 68 – 75 degrees – **Warmer than yesterday**
WINDS (20 FT): SSE5-10 in the afternoon **Similar to yesterday**

GENERAL: Moisture from yesterday will favor lower fire intensity throughout the burn today. As humidities begin to drop in the afternoon, expect smokes to begin to show and possible ground fire and occasional flare-ups to been seen. Review updated IR flight for areas that still contain heat along the fireline.

FUELS: Live fuels are critically low due to drought impacts on the vegetation; Most of this fire is burning in vegetation that has not burned in over 50 years. Old burns are not containing fire spread. Expect fires to continue to actively spread in these old burns. This minor amount of moisture has increased the 1 and 10 hour fuel moistures.

WEATHER: Temps, RH's and winds are normal for this time of year and do not contribute to enhanced potential fire behavior. Cloud cover will dissipate by the beginning of the burn period lowering RH's.

TOPOGRAPHY: This higher elevation fire has little opportunity to make long canyon runs due to it location on top of the San Bernardino Mountains. Small runs are still possible where slope and continuous fuels are in alignment. Watch for the affects of the thermal belt in elevation less than 5000 feet.

BRANCH I

Aggressive mop-up efforts continue to reduce fire intensities. Large snags are still burning-out far interior. Four days into this burn area more snags should be weakening and falling. Watchout for the potential for spots that could roll downhill across the fireline when these snags fall.

BRANCH II

Islands of unburned vegetation exist throughout this branch. In areas where there are detectable smokes and a minor amount of timber, helicopter bucket drops should be able to reduce the burn time of grass and brush fuel types. In areas that have a heavy down timber component, water bucket drops will have a short term impact on these fuels and may continue to smolder until worked by handcrews. Interior isolated torching is still possible where crews find terrain inaccessible. Green islands around the areas of Lower Rowco, the Enchanted Forest, Fredalba and Smiley Park will be susceptible to continued visible smokes.

BRANCH III

Numerous hotspots along the main fireline are still detectable. Much of this area where the fire burned through is very scabby and hard to detect a true fire edge. What remains from Heaps Peak north to the Boy Scout camp will consist of ground fire heavy fuels continuing to burnout along with some small pockets of continuous understory fuels. Hotspots along the edge of the fireline will continue to persist until burned out or mopped up.

AIR OPERATIONS: No adverse smoke impacts from the fire are anticipated to affect aviation operations.

SAFETY

- ✓ **BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR**
- ✓ **FIELD OBSERVATIONS WILL BE ABLE TO DETECT THIS CHANGING CONDITION – PLEASE DROP OFF ALL FIELD OBSERVATIONS TO THE IMET/FBAN TRAILER**

SAFETY MESSAGE

SLIDE

October 28, 2007 Day Shift

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONES
WEAR YOUR PERSONAL PROTECTIVE EQUIPMENT DURING ALL OPERATIONS

Brief your crews on all components of the IAP

- ✓ **Dedicated lookouts are a must, they must have a good situational awareness, and pre-determined trigger points that ensure adequate escape times.**
- ✓ **Monitor and stay alert of all impacted areas of electrical and gas damaged structures within your work assignment.**
- ✓ **Situational Awareness- assess and use your IRPG (page 2-3). “Say, what if?” – Situational awareness is all-the-time (slope/topography/terrain, fuels, etc.)**
- ✓ **Safely maintain your driving speeds and attention at all times.**

Recognize what your SA is telling you.....If any of these conflict with your perception.....Review the “RISK MANAGEMENT PROCESS

Risk Mgt. Process:

Step 1: Situation Awareness

- Gather Information
- Scout the fire

Step 2: Hazard Assessment

- Est. potential fire behavior hazards
- Identify tactical hazards

Step 3: Hazard Control

- Establish anchor point
- LCES – MANDATORY

Step 4: Decision Point

- Are controls in place for ID’ed hazards?
- Are selected tactics based on expected fire behavior?
- Have instructions been given and understood?

Step 5: Evaluate

- Self: fatigue, attitude, experience, distracted?
- The situation: what is changing?

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	SNAG HAZARDS & GREEN TREE HAZARDS	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p. 80). • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen, clear the area before falling, YELL OUT! • Be especially alert around snags AND green trees during wind events.
ALL	EXTREME FIRE BEHAVIOR POTENTIAL	<ul style="list-style-type: none"> • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. ▪ Adhere to 10 Std Orders, mitigate 18 situations. Maintain Situational Awareness.
ALL	DRIVING HAZARDS	<ul style="list-style-type: none"> • Highway 18 speed limit 35 mph • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Power poles burnt and wires across the road, consider all wires hot. • Media in the work areas
ALL	FATIGUE	<ul style="list-style-type: none"> • Be alert for signs of fatigue & take breaks as necessary. Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue.
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones when bucket work in progress. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective.
ALL	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Ensure LCES in place prior to engagement (IRPG p. 6). • Adhere to 10 Std. Orders, mitigate 18 Situations. • Establish adequate safety zones (IRPG p.7) and escape routes. • Use Downhill Line Checklist (IRPG p. 8). • Follow "Look Up, Down, and Around" procedures (IRPG p. 2-3). • Utilize Risk Management Process (IRPG p.1).
ALL	IMPACTED UTILITIES ELECTRICAL & GAS	<ul style="list-style-type: none"> • Lots of power poles burnt through, wires should be treated as live in the fire area. • Natural gas lines are continuing being contained • Power lines are being re-energized in Running Springs area. • Damage assessment teams are out in burned areas
ALL	MOP UP	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Use all required PPE, especially eye protection. • Maintain proper spacing and overhead clearance. • Hazmat around structures, stay alert • Minimize exposure to smoke, and rotate personnel into clean air when practical. • Evaluate unburned islands/Increase situational awareness.
ALL	STRUCTURE PROTECTION & HAZMAT ISSUES	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Utilize Structure Assessment Checklist (IRPG p.14). • Follow Structure Protection Guidelines (IRPG p. 16). • Utilize HazMat IC Checklist (IRPG p. 26).
ALL	TREE FELLING	<ul style="list-style-type: none"> • Refer to F.S. Health and Safety Code sections 22.48G. • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Establish traffic control as necessary, keep personnel unnecessary to the operation out of the area.
ALL	LIMITED MEDIVAC CAPABILITY DUE TO PERIODS OF SMOKE INVERSION	<ul style="list-style-type: none"> • Assign personnel with Advanced Life Support capability on the line. • Cache emergency equip. (backboards etc.) in various locations on line. • Keep line personnel informed of this issue. Safety briefings to stress that extra care should be taken with high-risk tasks (i.e. tree falling, etc.). • Supervisors insure that personnel with severe reaction to bee sting, etc. have "epi-kits" or consider leaving such individuals in camp.
ALL	SAFETY ZONES	<ul style="list-style-type: none"> • Follow safety zone guidelines (IRPG p. 7) • Limited Safety Zones require additional dedicated LO, and trigger points • Carefully evaluate burned areas before designation as safety zones. • When safety zones are distant from work site, set trigger points to allow personnel to reach them in a timely manner.

Aloha!

Slide Incident Trainees

From your incident Training Specialists, Chief Olias and Bill Reynolds. We have relocated to a more user friendly location in the Ski Lodge, bottom floor. Trainees assigned to the incident, you must check in with us to receive credit for all your work on this assignment. It is your responsibility. Looking forward to seeing you soon! Training Specialist's Bill and Olias say ***ALOHA!***

Fire Suppression Repair Guidelines (Phase I)

Fire suppression repair is a two phase process. Phase I repairs are intended to stabilize the control lines from a hydrologic stand point and prevent unnecessary erosion from occurring while maintaining the fire stopping integrity of the lines. The following Phase I actions will be implemented as soon as the Branch and Division Supervisors authorize it, and prior to the demobilization of the Type II Management Team. (Phase II repairs are generally implemented after the fire is declared controlled or out and are detailed in the Incident Suppression Repair Plan.)

ROADS

1. Existing dirt surfaced roads used for access will be returned as close to pre-incident condition as possible.
2. Existing roads that were closed, but reopened for the current incident will be signed, gated, roped, and/or flagged in such a way that the public will be aware that the route is not open for use. If it is determined that a previously closed road will not be needed by the Type III organization, it will be restored to its pre-fire condition and entry points will be secured.

DOZER LINES

All dozer lines require archaeological and biological surveys prior to rehabilitation. Dozer lines will be treated by pulling outside berms (excluding flammable materials) back into the control line, re-contouring or out-sloping the surface to allow for drainage, and where necessary, placing waterbars. Waterbars will consist of a minimum of a six inch (6") cut into the firm bed of the control line and have a berm with a compacted height of no less than twelve inches (12"). Waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. Where extreme slopes prevent the use of heavy equipment from placing waterbars in control lines, hand crews will be used to perform the necessary erosion control work. When dozer lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge. In some cases, chunking or berming at vehicle access points should be used in combination with the above techniques to prevent access for unauthorized OHV use.

HAND LINES

Hand lines will be repaired to allow for drainage by re-contouring and construction of waterbars. Waterbars for hand lines should be cut to a depth equal to the width of a standard fire shovel. The waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. The outside end of the waterbar must be open and should discharge into an area where the ground surface is protected by vegetation that is unburned, if possible. Trenching and berms, where present, will be removed and any nonflammable topsoil available will be pulled back cross the hand line. When hand lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge.

WATERBARS

Waterbars should be constructed at logical discharge points and guided by the spacing criteria as follows:

Fireline slope %	Maximum Distance Apart (feet)
1-14	150
15-20	90
21-40	50
41+	25

INSTREAM IMPROVEMENTS (WATER SOURCES)

All in-stream facilities and disturbance created by activities to improve water collection for fire suppression will be evaluated and mitigated under the direction of the Resource Advisor and/or designees. These facilities and disturbances include but are not limited to sumps, drafting locations, and intentionally blocked culverts. All building and other materials such as plastics, canvas, plywood, dimension lumber, etc., will be removed from such sites to a suitable disposal site or be recycled. All trash, cardboard, hoses, fittings, and pumps will be removed from the site.

HELISPOTS, HELIPOINTS, SAFETY ISLANDS, DROP POINTS, OTHER CLEARINGS AND IMPROVEMENTS

All clearings constructed to support suppression activities will be returned as closely to pre-incident conditions as is possible. At a minimum, berms will be pulled or raked back into the site, if needed the site will be crowned to facilitate surface drainage and the vegetative material removed from the site will be lopped and scattered over the disturbed area to reduce erosion/unauthorized off-highway-vehicle potential. In some cases, chunking, berming or other barriers may be used in combination with the above techniques to prevent access for unauthorized OHV use. **All areas cleared by heavy equipment must be surveyed for archaeological/biological resources prior to rehabilitation.** Improvements such as fences, gates, guzzlers, flood control basins, drainage structures, drainage channel, culverts, and paved roads damaged by suppression activities will be repaired to pre-fire conditions during Phase I repairs. When dealing with damages to private property or repairs/mitigations to improvements that are beyond the capacity of suppression resources, notify the Resource Advisor and/or designee.

QUESTIONS? Contact a Resource Advisor at 909-844-6684
