**FORECAST ISSUED:** October 29, 2007 **Incident Meteorologist**

---

**WEATHER DISCUSSION:** An area of low pressure will continue to move across California...bringing a moist flow...cooler temperatures and elevated humidity levels to areas of the fire through Tuesday. Expect gusty Southwest to West winds...up to 20 mph at times throughout the night.

---

**WEATHER FORECAST for Tonight:**

**WEATHER:** Partly cloudy with patchy fog after midnight.

**MINIMUM TEMPERATURES:** 40 to 45 degrees.

**MAXIMUM RELATIVE HUMIDITY:** 58 to 68 percent...up to 90 percent in favored drainages.

**20 FT WINDS:**

**RIDGETOP** – Southwest to West 15 to 20 mph.

**SLOPE/VALLEY** – Southwest 7 to 10 with occasional gusts to 20 throughout the night.

---

**Outlook Wednesday through Saturday:**

A drier Northwest to Northeasterly flow continues Wednesday through Thursday in conjunction with a series of weak low pressure systems. Friday afternoon through Saturday...an intense area of low pressure moves through the Great Basin. This system has the potential to generate gusty Northeast to East winds over portions of Southern California...with speeds of 20 to 25 mph and local gusts to 40 mph. However...there is still a high level of uncertainty concerning the intensity of this wind event.

# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 12	TYPE OF FIRE: WILDFIRE
FIRE NAME: SLIDE FIRE	OPERATIONAL PERIOD: MON 10/29/07 NIGHT SHIFT
DATE ISSUED: 10/29/07	TIME ISSUED: 1100
UNIT: SAN BERNARDINO NATIONAL FOREST	SIGNED: <i>Isl Kelly Martin - FBAN</i>

**MAX RH:** 58 - 68% **Almost 10% higher than last night**  
**MIN TEMP:** 42 - 47 degrees – **Similar to last night**  
**WINDS (20 FT):** SSW 9-12G25 **Gusty winds early evening becoming downslope after dark**

**GENERAL:** Nighttime conditions continue to favor low fire behavior potential. Snags will continue to burn down as will heavy jackpot fuels in the timber types. Somewhat higher RH's will assist with the reduction duff and litter.

**FUELS:** Live fuels are critically low due to drought impacts on the vegetation; Most of this fire is burning in vegetation that has not burned in over 50 years. Old burns are not containing fire spread. Expect fires to continue to actively spread in these old burns when combined with low RH's

**WEATHER:** Low pressure trough off the coast will produce locally gusty winds and will persist out of the SSW

**TOPOGRAPHY:** This higher elevation fire has little opportunity to make long canyon runs due to its location on top of the San Bernardino Mountains. Small runs are still possible where slope and continuous fuels are in alignment

## **BRANCH I**

Little change in fire behavior tonight..... Fire behavior will consist of burnout of the remaining heavy concentrations of fuels. Most of the fire behavior in this area tonight will continue to be burning snags and ground fire in heavy concentrations

## **BRANCH II**

Little change in fire behavior tonight.....Detectable heat sources through this division deeper into the burn area will still be detected. Where the burn meets the mixed conifer, expect residual heat to persist over the next several days.

## **BRANCH III**

Little change in fire behavior tonight.....Heavy fuels beyond the mop-up edge will continue to burnout along with some small pockets of continuous understory fuels. Small hotspots along the edge of the fireline will continue to persist until burned out or mopped up.

## **OUTSIDE THREATS TO THE FIRELINE:**

Pay particular attention to local traffic that will now be entering the area. The greatest threat at this point will be a fire start from outside the main fireline.

**AIR OPERATIONS:** Gusty winds until dark.

## **SAFETY**

- ✓ **BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR –**
- ✓ **FIELD OBSERVATIONS WILL BE ABLE TO DETECT THIS CHANGING CONDITION – PLEASE DROP OFF ALL FIELD OBSERVATIONS TO THE IMET/FBAN TRAILER**

October 29-30, 2007 Night Shift

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONE  
**LCES IN PLACE EVERY TIME**

Night Shift is hard on crews. Crews have been working hard all summer, fatigue can effect performance and decision making capabilities:

- Stay aware if your crews condition
- Watch for fatigue, a failing attitude, distractions, and problems with intra-crew relationship

Supervisors need to continually weigh value vs risks in their strategy and tactics

## **Hazard Trees - Snags or Green!**

Hazards from snags and burning trees are second only to aviation accidents when accounting for the fatality and injury rate due to fire suppression activities.

Strengthen snag/hazard tree awareness for all of your folks, including flagging known hazards and identify to all crewmembers.
