Fire Weather Forecast

FORECAST NO: 14 **NAME OF FIRE:** Slide / Grass Valley **UNIT:** BDF

PREDICTION FOR: 0600 to 1800 PDT Tuesday **SHIFT:** Day

SHIFT DATE: October 30, 2007 **SIGNED:**

TIME AND DATE 2000 PDT Monday
FORECAST ISSUED: October 29, 2007

Valerie L. Meyers
Incident Meteorologist

WEATHER DISCUSSION: An area of low pressure will continue to bring a moist flow...cooler temperatures and elevated humidity levels to areas of the fire today and tonight. Expect gusty Southwest to West winds...up to 25 mph at times during the afternoon.

WEATHER FORECAST:

WEATHER: Partly cloudy. Patchy fog in the morning.

MAXIMUM TEMPERATURES: 61 to 71 degrees.

MINIMUM RELATIVE HUMIDITY: 25 to 33 percent.

20 FT WINDS:

RIDGETOP – Southwest to West 15 to 20 mph.

SLOPE/VALLEY – Southwest to West 9 to 12 with gusts to 25 in the afternoon.

Forecast for Tuesday night: (OPERATIONAL PERIOD – 1800 PDT 10/30/07 to 0600 PDT 10/31/07)

Partly cloudy with patchy fog after midnight. Minimum temperatures...39 to 44 degrees. Maximum RH...60 to 70 percent...up to 90 percent in favored drainages. Ridgetop winds...West to Northwest 5 to 10 mph. Slope/Valley winds...light and variable in the evening favoring West...downslope and downvalley late.

Forecast for Wednesday: (OPERATIONAL PERIOD – 0600 to 1800 PDT 10/31/07)

Mostly sunny. Maximum temperatures...63 to 73 degrees. Minimum RH...20 to 30 percent. Ridgetop winds...North to Northeast 10 mph. Slope/Valley winds...upslope 5 to 8 mph.

Outlook Thursday through Saturday:

A drier Northwesterly to Northeasterly flow continues Thursday in conjunction with a series of weak low pressure systems. By Friday...an area of low pressure continues to influence the flow over Southern California...and the probability of an off-shore wind event is less. A drier Northeast to East flow does set up over the fire...and wind speeds of 15 to 25 mph...with local gusts to 35 mph are possible Saturday. However...there remains a high level of uncertainty concerning the intensity of this wind event.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 13	TYPE OF FIRE: WILDFIRE
FIRE NAME: SLIDE / GRASS VALLEY FIRES	OPERATIONAL PERIOD: TUESDAY 10/30/07 DAY SHIFT
DATE ISSUED: 10/29/07	TIME ISSUED: 2100
UNIT: SAN BERNARDINO NATIONAL FOREST	SIGNED: <i>Isl Kim Soper - FBAN</i>

MIN RH: 25 - 33% **Slightly higher than yesterday**
MAX TEMP: 61 - 71 degrees – **Cooler than yesterday**
WINDS (20 FT): SW to W 15-20G **About the same as yesterday**

GENERAL: An area pressure will continue to move across California bringing a moist flow, cooler temps, and elevated humidity levels to the fire area.

FUELS: Live fuels are critically low due to drought impacts on the vegetation; Most of this fire is burning in vegetation that has not burned in over 50 years. Old burns are not containing fire spread. Expect fires to continue to actively spread in these old burns especially with low dead fuel moisture.

WEATHER: Temps, RH's and winds are normal for this time of year and do not contribute to enhanced potential fire behavior. Winds will be a key factor enhancing fire behavior.

TOPOGRAPHY: This higher elevation fire has little opportunity to make long canyon runs due to its location on top of the San Bernardino Mountains. Small runs are still possible where slope and continuous fuels are in alignment. Watch for the effects of the thermal belt in elevation less than 5000 feet.

BRANCH I (SLIDE FIRE)

With the moist cooler weather expected today there will be an excellent chance to continue the mopup efforts that will strengthen the control lines. Stay aggressive with areas that have the potential to flare-up. Scout under dense canopies where ground fuels have been smoldering for the last few days waiting for winds to accelerate torching. Aggressive mop-up efforts deeper into the burn will reduce flare-ups and spotting potential today... Large snags are still burning-out far interior. Green islands will be susceptible to continued visible smokes.

BRANCH II (SLIDE FIRE)

With the moist cooler weather expected today there will be an excellent chance to continue the mopup efforts that will strengthen the control lines. In areas where there are detectable smokes and a minor amount of timber, helicopter bucket drops should be able to reduce the burn time of grass and brush fuel types. In areas that have a heavy down timber component, water bucket drops will have a short term impact on these fuels and may continue to smolder until worked by handcrews. Green islands will be susceptible to continued visible smokes.

BRANCH III (SLIDE FIRE)

With the moist cooler weather expected today there will be an excellent chance to continue the mopup efforts that will strengthen the control lines. Numerous hotspots along the main fireline are still detectable. Much of this area where the fire burned through is very scabby and hard to detect a true fire edge. Aggressive mop-up efforts deeper into the burn will reduce flare-ups and spotting potential today... Green islands will be susceptible to continued visible smokes.

BRANCH IV (GREEN VALLEY FIRE)

With the moist cooler weather expected today there will be an excellent chance to continue the mopup efforts that will strengthen the control lines. Containment of the main fire, good mop-up efforts, and containment of spot fires have minimized chances for an escape but don't let your guard down.

AIR OPERATIONS: No adverse smoke impacts from the fire are anticipated to affect aviation operations.

SAFETY

- ✓ **BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR – EXPECT HIGH WINDS!!**
- ✓ ***Never go into an area with out establishing your LCES.***

A MOMENT FOR SAFETY CAN LAST A LIFETIME.

SAFETY MESSAGE

Slide

Oct 30, 2007 Day Shift

LOOKOUTS, COMMUNICATIONS, ESCAPE ROUTES, SAFETY ZONE

Utilities workers all still working in all residential areas, stay clear give them some space.

- Be alert for increased traffic, in and around the **Slide Fire**. Locals slipping thru the roadblocks are driving the roads very fast, heads up.....
 - **Arrowhead** area is wide open to the public, lots of traffic in route to the Grass Valley Fire. Watch for public entering the closed fire area, lots of access points, expect them on the fire.
-

Hazard Trees – Snags or Green !!

Hazards from snags and burning green trees are second only to aviation accidents when accounting for the fatality and injury rate due to fire suppression activities. Firefighter safety with regards to snags can be improved by:

Strengthening snag/hazard tree awareness for all firefighters. Emphasize snag/hazard tree hazards at all briefings and tailgate sessions before crews are committed. Flag known hazards and identify to all crewmembers

Including “hazard tree/snag intelligence” in all fire suppression discussions and briefings. Hazard tree/snag intelligence should consider things like; the occurrence and extent of hazard tree/snag, anticipated hazard tree/snag “burn-out” time, location of hazardous area to be avoided

“Risk Management Process is part of Mop Up & REHAB”

Prepared by: **Jennifer Boyd Safety Officer** Date: 10/29/07
Shelby Charley Safety Officer

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL BRs FALLING GRP	SNAG HAZARDS & GREEN TREE HAZARDS	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p. 80). • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen, clear the area before falling, YELL OUT! • Be especially alert around snags AND green trees during wind events.
ALL	Fire Behavior	<ul style="list-style-type: none"> • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. ▪ Adhere to 10 Std Orders, mitigate 18 situations. Maintain Situational Awareness.
ALL BRs ROADS GRP	DRIVING HAZARDS	<ul style="list-style-type: none"> • Highway 18 speed limit 35 mph • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Power poles burnt and wires across the road, consider all wires hot. • Media in the work areas
ALL	FATIGUE	<ul style="list-style-type: none"> • Be alert for signs of fatigue & take breaks as necessary. Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue.
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones when bucket work in progress. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective.
BR I, DIVS- E,F,G BR II DIV- H,I,J BR III DIVS- T, U,V BR IV	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Ensure LCES in place prior to engagement (IRPG p. 6). • Adhere to 10 Std. Orders, mitigate 18 Situations. • Establish adequate safety zones (IRPG p.7) and escape routes. • Use Downhill Line Checklist (IRPG p. 8). • Follow "Look Up, Down, and Around" procedures (IRPG p. 2-3). • Utilize Risk Management Process (IRPG p.1).
ALL	IMPACTED UTILITIES ELECTRICAL & GAS	<ul style="list-style-type: none"> • Lots of Utility construction going on, stay clear. • Lots of power poles burnt through, wires should be treated as live in the fire area. • Natural gas lines are mostly capped, still potential • Power lines are being re-energized in Running Springs area. • Damage assessment teams are out in burned areas
ALL	MOP UP	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Use all required PPE, especially eye protection. • Maintain proper spacing and overhead clearance. • Hazmat around structures, stay alert • Minimize exposure to smoke, and rotate personnel into clean air when practical. • Evaluate unburned islands/Increase situational awareness.
ALL STRUCTURE GROUPS	STRUCTURE PROTECTION & HAZMAT ISSUES	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Utilize Structure Assessment Checklist (IRPG p.14). • Follow Structure Protection Guidelines (IRPG p. 16). • Utilize HazMat IC Checklist (IRPG p. 26).
ALL BRs FALLING GROUP	TREE FELLING	<ul style="list-style-type: none"> • Refer to F.S. Health and Safety Code sections 22.48G. • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Establish traffic control as necessary, keep personnel unnecessary to the operation out of the area.
ALL	SAFETY ZONES	<ul style="list-style-type: none"> • Follow safety zone guidelines (IRPG p. 7) • Limited Safety Zones require additional dedicated LO, and trigger points • Carefully evaluate burned areas before designation as safety zones. • When safety zones are distant from work site, set trigger points to allow personnel to reach them in a timely manner.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether

the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (Project 25)

Aloha!

Slide Incident Trainees

From your incident Training Specialists:

Chief Olias
Bill Reynolds

We have relocated to a user friendly location in the Ski Lodge, bottom floor.

Trainees assigned to the incident:

You must check in with us to receive credit for all your work on this assignment. It is your responsibility.

Looking forward to seeing you soon!

Training Specialist's Bill and Olias say *ALOHA and J support the plan!*

Fire Suppression Repair Guidelines (Phase I)

Fire suppression repair is a two phase process. Phase I repairs are intended to stabilize the control lines from a hydrologic stand point and prevent unnecessary erosion from occurring while maintaining the fire stopping integrity of the lines. The following Phase I actions will be implemented as soon as the Branch and Division Supervisors authorize it, and prior to the demobilization of the Type II Management Team. (Phase II repairs are generally implemented after the fire is declared controlled or out and are detailed in the Incident Suppression Repair Plan.)

ROADS

1. Existing dirt surfaced roads used for access will be returned as close to pre-incident condition as possible.
2. Existing roads that were closed, but reopened for the current incident will be signed, gated, roped, and/or flagged in such a way that the public will be aware that the route is not open for use. If it is determined that a previously closed road will not be needed by the Type III organization, it will be restored to its pre-fire condition and entry points will be secured.

DOZER LINES

All dozer lines require archaeological and biological surveys prior to rehabilitation. Dozer lines will be treated by pulling outside berms (excluding flammable materials) back into the control line, re-contouring or out-sloping the surface to allow for drainage, and where necessary, placing waterbars. Waterbars will consist of a minimum of a six inch (6") cut into the firm bed of the control line and have a berm with a compacted height of no less than twelve inches (12"). Waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. Where extreme slopes prevent the use of heavy equipment from placing waterbars in control lines, hand crews will be used to perform the necessary erosion control work. When dozer lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge. In some cases, chunking or berming at vehicle access points should be used in combination with the above techniques to prevent access for unauthorized OHV use.

HAND LINES

Hand lines will be repaired to allow for drainage by re-contouring and construction of waterbars. Waterbars for hand lines should be cut to a depth equal to the width of a standard fire shovel. The waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. The outside end of the waterbar must be open and should discharge into an area where the ground surface is protected by vegetation that is unburned, if possible. Trenching and berms, where present, will be removed and any nonflammable topsoil available will be pulled back cross the hand line. When hand lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge.

WATERBARS

Waterbars should be constructed at logical discharge points and guided by the spacing criteria as follows:

Fireline slope %	Maximum Distance Apart (feet)
1-14	150
15-20	90
21-40	50
41+	25

INSTREAM IMPROVEMENTS (WATER SOURCES)

All in-stream facilities and disturbance created by activities to improve water collection for fire suppression will be evaluated and mitigated under the direction of the Resource Advisor and/or designees. These facilities and disturbances include but are not limited to sumps, drafting locations, and intentionally blocked culverts. All building and other materials such as plastics, canvas, plywood, dimension lumber, etc., will be removed from such sites to a suitable disposal site or be recycled. All trash, cardboard, hoses, fittings, and pumps will be removed from the site.

HELISPOTS, HELIPOINTS, SAFETY ISLANDS, DROP POINTS, OTHER CLEARINGS AND IMPROVEMENTS

All clearings constructed to support suppression activities will be returned as closely to pre-incident conditions as is possible. At a minimum, berms will be pulled or raked back into the site, if needed the site will be crowned to facilitate surface drainage and the vegetative material removed from the site will be lopped and scattered over the disturbed area to reduce erosion/unauthorized off-highway-vehicle potential. In some cases, chunking, berming or other barriers may be used in combination with the above techniques to prevent access for unauthorized OHV use. **All areas cleared by heavy equipment must be surveyed for archaeological/biological resources prior to rehabilitation.** Improvements such as fences, gates, guzzlers, flood control basins, drainage structures, drainage channel, culverts, and paved roads damaged by suppression activities will be repaired to pre-fire conditions during Phase I repairs. When dealing with damages to private property or repairs/mitigations to improvements that are beyond the capacity of suppression resources, notify the Resource Advisor and/or designee.
