Fire Weather Forecast

FORECAST NO: 16 **NAME OF FIRE:** Slide / Grass Valley **UNIT:** BDF

PREDICTION FOR: 0600 to 1800 PDT Wednesday **SHIFT:** Day/Night
1800 to 0600 PDT Thursday

SHIFT DATE: October 31, 2007

SIGNED:

TIME AND DATE 2000 PDT Tuesday
FORECAST ISSUED: October 30, 2007

Daniel Harty
Incident Meteorologist

WEATHER DISCUSSION: Drier Northwesterly flow aloft will be in place through Thursday which will gradually lower afternoon relative humidity levels back into the teens. An upper level ridge of high pressure will then build in from the coast Friday into Saturday. This will bring warmer and drier conditions along with a moderate east northeast surface wind over the fire area by Saturday.

WEATHER FORECAST for Today :

WEATHER: Mostly sunny. Patchy fog in the morning.

MAXIMUM TEMPERATURES: 63 to 73 degrees.

MINIMUM RELATIVE HUMIDITY: 20 to 30 percent.

20 FT WINDS:

RIDGETOP – North to northeast 10 mph.

SLOPE/VALLEY – Upslope 5 to 8 mph.

Forecast for Wednesday night: (OPERATIONAL PERIOD – 1800 PDT 10/31/07 to 0600 PDT 11/1/07)

Mostly clear. Minimum temperatures...39 to 44 degrees. Maximum RH...50 to 60 percent...up to 80 percent in favored drainages. Ridgetop winds...North to Northeast 5 to 10 mph. Slope/Valley winds...light and variable in the evening favoring East...downslope and downvalley late.

Forecast for Thursday: (OPERATIONAL PERIOD – 0600 to 1800 PDT 11/1/07)

Mostly sunny. Maximum temperatures...64 to 74 degrees. Minimum RH...18 to 28 percent. Ridgetop winds...North 5 to 10 mph. Slope/Valley winds...upslope 5 to 8 mph.

Outlook Friday through Sunday:

An upper ridge of high pressure will build in to the north on Friday as a weak trough of low pressure slides south across the fire area. Expect slightly warmer and drier surface conditions Friday but the off-shore winds do not look to increase much until Saturday. Northeast to East winds of 15 to 25 mph with local gusts to 35 mph may be realized Saturday morning through midday, with decreasing winds by late afternoon. Lighter winds are expected on Sunday.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 15	TYPE OF FIRE: WILDFIRE
FIRE NAME: SLIDE / GRASS VALLEY FIRES	OPERATIONAL PERIOD: WEDNESDAY 10/31/07 DAY / NIGHT SHIFT
DATE ISSUED: 10/30/07	TIME ISSUED: 2100
UNIT: SAN BERNARDINO NATIONAL FOREST	SIGNED: <i>Isl Kim Soper - FBAN</i>

MIN RH: 20 - 30% daytime, 50 – 60% nighttime **Slightly dryer & warmer than yesterday**
MAX TEMP: 63 - 73 degrees daytime, 39 – 44 degrees nighttime
WINDS (20 FT): N to NE 5-10 daytime, NE 5 -10 nighttime

GENERAL: Mostly sunny. Patchy fog in the morning. Drier northwesterly flow aloft will be in place through Thursday which will gradually lower afternoon relative humidity levels back into the teens.

FUELS: Live fuels are critically low due to drought impacts on the vegetation; Most of this fire is burning in vegetation that has not burned in over 50 years. 1000 hour fuels that are burning will continue to burn until total consumption is completed or a fire ending event extinguishes the fire interior to control lines.

WEATHER: Temps, RH's and winds are normal for this time of year and do not contribute to enhanced potential fire behavior. Winds and extremely dry fuels will be a key factor enhancing fire behavior.

TOPOGRAPHY: This higher elevation fire has little opportunity to make long canyon runs due to its location on top of the San Bernardino Mountains. Small runs are still possible where slope and continuous fuels are in alignment within interior unburned islands.

BRANCH I, II, III (SLIDE FIRE)

The fire is holding at the current hand and dozer line. Isolated hotspots may be within the interior of the burn. Little fire activity is anticipated. Night time recovery will aid in suppression efforts. With the chance of slightly warmer dryer weather expected today the 1000 hr fuels will continue to burn. Continue to monitor areas that have the potential to flare-up. Scout under dense canopies where ground fuels have been smoldering for the last few days waiting for winds to accelerate torching. Aggressive mop-up efforts deeper into the burn will reduce flare-ups and spotting potential. Green islands will be susceptible to continued visible smokes until all fuels are consumed.

BRANCH IV (GREEN VALLEY FIRE)

The fire is holding at the current hand and dozer line. Isolated hotspots may be within the interior of the burn. Little fire activity is anticipated. Night time recovery will aid in suppression efforts. Mopup efforts will need to continue to strengthen the control lines. Containment of the main fire, good mop-up efforts, and containment of spot fires have minimized chances for an escape but don't let your guard down.

AIR OPERATIONS: No adverse smoke impacts from the fire will affect aviation operations.

SAFETY

- ✓ **BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR – EXPECT HIGH WINDS!!**
- ✓ **Never go into an area with out establishing your LCES.**
- ✓ **Continue to watch for overhead hazards such as burning snags.**

A MOMENT FOR SAFETY CAN LAST A LIFETIME.

HAPPY HALLOWEEN

Oct 31-Nov-1 2007 Day/Night Shift

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONES
WEAR YOUR PERSONAL PROTECTIVE EQUIPMENT DURING ALL OPERATIONS

Brief your crews on all components of the IAP

Utilities workers all still working in all residential areas, stay clear give them some space

- ✓ Grass Valley is wide open to the public expect, lots of traffic with everybody returning.
- ✓ Residences who lost their homes will be allowed back into the Running Springs area expect a high volume of vehicle traffic, also expect some of those folks to remain in.
- ✓ Crews have been working hard all summer, crew fatigue can effect performance and decision making capabilities; Stay aware of your crews condition. Watch for fatigue, a failing attitude, distractions, and problems with intra-crew relationship.
- ✓ We have had a lot of minor traffic accidents, use backers walk around before moving, these are very preventable.
- ✓ IDENTIFIABLE RISKS ARE MANAGEABLE RISKS! , TAKE THE TIME TO IDENTIFY RISKS IN YOUR WORK AREA.
- ✓ Change up crew briefings, have crew members present a topic, ask questions get some interaction going, keep your folks engaged.

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL BRs FALLING GRP	SNAG HAZARDS & GREEN TREE HAZARDS	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p. 80). • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen, clear the area before falling, YELL OUT! • Be especially alert around snags AND green trees during wind events.
ALL	Fire Behavior	<ul style="list-style-type: none"> • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. ▪ Adhere to 10 Std Orders, mitigate 18 situations. Maintain Situational Awareness.
ALL BRs ROADS GRP	DRIVING HAZARDS	<ul style="list-style-type: none"> • Highway 18 speed limit 35 mph • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Power poles burnt and wires across the road, consider all wires hot. • Media in the work areas • Grass Valley area will have full entry-you are a visitor around their homes. Drive defensively at all times and give the right away to the home owners. • Running Springs area will have the home owners in the area during the daylight hours. Watch for the public not watching the road at all times.
ALL	FATIGUE	<ul style="list-style-type: none"> • Be alert for signs of fatigue & take breaks as necessary. Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue.
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones when bucket work in progress. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective.
		<ul style="list-style-type: none"> •
ALL	IMPACTED UTILITIES ELECTRICAL & GAS	<ul style="list-style-type: none"> • Lots of Utility construction going on, stay clear. • Lots of power poles burnt through, wires should be treated as live in the fire area. • Natural gas lines are mostly capped, still potential • Power lines are being re-energized in Running Springs area. • Damage assessment teams are out in burned areas
ALL	MOP UP	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Use all required PPE, especially eye protection. • Maintain proper spacing and overhead clearance. • Hazmat around structures, stay alert • Minimize exposure to smoke, and rotate personnel into clean air when practical. • Evaluate unburned islands/Increase situational awareness.
ALL STRUCTUR E GROUPS	STRUCTURE PROTECTION & HAZMAT ISSUES	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Utilize Structure Assessment Checklist (IRPG p.14). • Follow Structure Protection Guidelines (IRPG p. 16). • Utilize HazMat IC Checklist (IRPG p. 26).
ALL BRs FALLING GROUP	TREE FELLING	<ul style="list-style-type: none"> • Refer to F.S. Health and Safety Code sections 22.48G. • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Establish traffic control as necessary, keep personnel unnecessary to the operation out of the area.
ALL	SAFETY ZONES	<ul style="list-style-type: none"> • Follow safety zone guidelines (IRPG p. 7) • Limited Safety Zones require additional dedicated LO, and trigger points • Carefully evaluate burned areas before designation as safety zones. • When safety zones are distant from work site, set trigger points to allow personnel to reach them in a timely manner.

--------------	---	---

Fire Suppression Repair Guidelines (Phase I)

Fire suppression repair is a two phase process. Phase I repairs are intended to stabilize the control lines from a hydrologic stand point and prevent unnecessary erosion from occurring while maintaining the fire stopping integrity of the lines. The following Phase I actions will be implemented as soon as the Branch and Division Supervisors authorize it, and prior to the demobilization of the Type II Management Team. (Phase II repairs are generally implemented after the fire is declared controlled or out and are detailed in the Incident Suppression Repair Plan.)

ROADS

1. Existing dirt surfaced roads used for access will be returned as close to pre-incident condition as possible.
2. Existing roads that were closed, but reopened for the current incident will be signed, gated, roped, and/or flagged in such a way that the public will be aware that the route is not open for use. If it is determined that a previously closed road will not be needed by the Type III organization, it will be restored to its pre-fire condition and entry points will be secured.

DOZER LINES

All dozer lines require archaeological and biological surveys prior to rehabilitation. Dozer lines will be treated by pulling outside berms (excluding flammable materials) back into the control line, re-contouring or out-sloping the surface to allow for drainage, and where necessary, placing waterbars. Waterbars will consist of a minimum of a six inch (6") cut into the firm bed of the control line and have a berm with a compacted height of no less than twelve inches (12"). Waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. Where extreme slopes prevent the use of heavy equipment from placing waterbars in control lines, hand crews will be used to perform the necessary erosion control work. When dozer lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge. In some cases, chunking or berming at vehicle access points should be used in combination with the above techniques to prevent access for unauthorized OHV use.

HAND LINES

Hand lines will be repaired to allow for drainage by re-contouring and construction of waterbars. Waterbars for hand lines should be cut to a depth equal to the width of a standard fire shovel. The waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. The outside end of the waterbar must be open and should discharge into an area where the ground surface is protected by vegetation that is unburned, if possible. Trenching and berms, where present, will be removed and any nonflammable topsoil available will be pulled back cross the hand line. When hand lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge.

WATERBARS

Waterbars should be constructed at logical discharge points and guided by the spacing criteria as follows:

Fireline slope %	Maximum Distance Apart (feet)
1-14	150
15-20	90
21-40	50
41+	25

INSTREAM IMPROVEMENTS (WATER SOURCES)

All in-stream facilities and disturbance created by activities to improve water collection for fire suppression will be evaluated and mitigated under the direction of the Resource Advisor and/or designees. These facilities and disturbances include but are not limited to sumps, drafting locations, and intentionally blocked culverts. All building and other materials such as plastics, canvas, plywood, dimension lumber, etc., will be removed from such sites to a suitable disposal site or be recycled. All trash, cardboard, hoses, fittings, and pumps will be removed from the site.

HELISPOTS, HELIPOINTS, SAFETY ISLANDS, DROP POINTS, OTHER CLEARINGS AND IMPROVEMENTS

All clearings constructed to support suppression activities will be returned as closely to pre-incident conditions as is possible. At a minimum, berms will be pulled or raked back into the site, if needed the site will be crowned to facilitate surface drainage and the vegetative material removed from the site will be lopped and scattered over the disturbed area to reduce erosion/unauthorized off-highway-vehicle potential. In some cases, chunking, berming or other barriers may be used in combination with the above techniques to prevent access for unauthorized OHV use. **All areas cleared by heavy equipment must be surveyed for archaeological/biological resources prior to rehabilitation.** Improvements such as fences, gates, guzzlers, flood control basins, drainage structures, drainage channel, culverts, and paved roads damaged by suppression activities will be repaired to pre-fire conditions during Phase I repairs. When dealing with damages to private property or repairs/mitigations to improvements that are beyond the capacity of suppression resources, notify the Resource Advisor and/or designee.

QUESTIONS? Contact a Resource Advisor at 909-844-6684
