Fire Weather Forecast

FORECAST NO: 17 **NAME OF FIRE:** Slide / Grass Valley **UNIT:** BDF

PREDICTION FOR: 0600 to 1800 PDT Thursday
1800 to 0600 PDT Friday **SHIFT:** Day/Night

SHIFT DATE: November 1, 2007 **SIGNED:**

TIME AND DATE 2000 PDT Wednesday Dan Harty
FORECAST ISSUED: October 31, 2007 **Incident Meteorologist**

WEATHER DISCUSSION: West northwest flow aloft will continue on Thursday with light surface winds and mainly clear skies. Temperatures will nudge up another degree or two this afternoon and relative humidity will trend slightly lower. Overnight temperatures will cool similar to previous nights with moderate relative humidity recovery and generally light winds.

WEATHER FORECAST for Today :

WEATHER: Mostly sunny.

MAXIMUM TEMPERATURES: 66 to 74 degrees.

MINIMUM RELATIVE HUMIDITY: 18 to 28 percent.

20 FT WINDS:

RIDGETOP – North 5 to 10 mph.

SLOPE/VALLEY – Upslope 5 to 8 mph.

Forecast for Thursday night: (OPERATIONAL PERIOD – 1800 PDT 11/1/07 to 0600 PDT 11/2/07)

Mostly clear. Minimum temperatures...36 to 44 degrees. Maximum RH...50 to 60 percent...up to 75 percent in favored drainages. Ridgetop winds...North to Northeast 5 to 10 mph. Slope/Valley winds...light and variable in the evening...downslope and downvalley late.

Forecast for Friday: (OPERATIONAL PERIOD – 0600 to 1800 PDT 11/2/07)

Mostly sunny. Maximum temperatures...68 to 76 degrees. Minimum RH...15 to 25 percent. Ridgetop winds...Northeast 5 to 10 mph with gusts around 15 mph in the afternoon. Slope/Valley winds...upslope 4 to 7 mph.

Outlook Saturday through Monday:

...Fire Weather Watch in effect Friday night and Saturday for low relative humidity and gusty offshore winds...

Surface high pressure over the Great Basin today will produce east to northeast winds of 15 to 25 mph with gusts as high as 40 mph through and below passes. The winds should begin to subside by late afternoon and continue to decrease overnight with generally light winds expected both Sunday and Monday. In addition to the gusty offshore winds, warmer and drier conditions will develop on Saturday as well. Expect little change in temperatures after Saturday but relative humidity should trend slightly higher as weak onshore flow develops. Skies will be mainly clear through the period.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 16	TYPE OF FIRE: WILDFIRE
FIRE NAME: SLIDE / GRASS VALLEY FIRES	OPERATIONAL PERIOD: WEDNESDAY 11/01/07 DAY / NIGHT SHIFT
DATE ISSUED: 10/31/07	TIME ISSUED: 2100
UNIT: SAN BERNARDINO NATIONAL FOREST	SIGNED: <i>Isl Kim Soper - FBAN</i>

WEATHER SUMMARY:

MIN RH: 18 - 28% daytime, 50 – 60% nighttime

MAX TEMP: 66 - 76 degrees daytime, 36 – 44 degrees nighttime

WINDS (20 FT): N 5-10 daytime, N - NE 5 -10 nighttime

Weather Discussion: West northwest flow aloft with light surface winds and mainly clear skies. Fire Weather Watch for Friday night and Saturday for low relative humidity and gusty offshore winds.

FIRE BEHAVIOR:

FUELS: Live fuels are critically low due to drought impacts on the vegetation; Most of this fire is burning in vegetation that has not burned in over 50 years. 1000 hour fuels that are burning will continue to burn until total consumption is completed or a fire ending event extinguishes the fire interior to control lines.

WEATHER: Temps, RH's and winds are normal for this time of year and do not contribute to enhanced potential fire behavior.

TOPOGRAPHY: Topography will have little effect on fire behavior due to control lines that are in place. Small runs are still possible where slope and continuous fuels are in alignment within interior unburned islands.

GENERAL: All control lines are in place on the fire. Full containment is close at hand. Some interior burning may still continue to burn until a fire ending event moves over the fire area.

SPECIFIC FIRE BEHAVIOR:

BRANCH I, II, III (SLIDE FIRE)

The fire is inactive near control lines. Hard work by line resources and excellent mopup standards has maintained the current fire perimeter. Several deep interior unburned islands continue to burn and produce smokes in heavy dead and down fuels and snags. Aggressive mop-up and patrols along the control lines will greatly limit the potential for flare ups near the line. Flare ups are still possible interior where large islands of unburned vegetation remain.

BRANCH IV (GREEN VALLEY FIRE)

The fire is inactive near control lines. Hard work by line resources and excellent mopup standards has maintained the current fire perimeter. A few interior unburned islands in Division Y continue to burn and produce smokes in heavy dead and down fuels and snags. Aggressive mop-up and patrols along the control lines will greatly limit the potential for flare ups near the line. Flare ups are still possible interior where large islands of unburned vegetation remain.

NIGHT SHIFT – ALL BRANCHES

All areas in patrol status. No significant fire activity is expected tonight. Any interior islands may stay active until after dark and RH recovery.

SAFETY

AIR OPERATIONS: No adverse smoke impacts from the fire will affect aviation operations.

Line Safety:

- **BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR – EXPECT HIGH WINDS!!**
- Never go into an area with out establishing your LCES.
- Continue to watch for overhead hazards such as burning snags.
- When doing your assignment maintain situational awareness and keep monitoring weather.

A MOMENT FOR SAFETY CAN LAST A LIFETIME.

DIVISION ASSIGNMENT LIST			1. Branch I		2. Division/Group Division G		
3. Incident Name Slide			4. Operational Period Date: 11/01/2007 Time: 0600-1800

Nov 1, 2007 Day Shift

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONE

LCES IN PLACE EVERY TIME

“THERE ARE NO EXCEPTIONS TO THIS”

Weather

- With the weather turning colder, everyone tends to drink less water. Remember to keep your hydration up at all times.

DRINK DRINK DRINK

Fireline:

- Mop up is way inside of the perimeter line. Look up, down, and around during all activities.
- Dedicated lookouts and road blocks, when working along the roads.
- Utility work continues in the fire area. Lots of equipment and personnel.
- A majority of the fire area as had power restored. Treat all power lines as energized!!!
- Personnel hygiene, wash your hands and stay healthy.

Transportation issues:

- All routes into the fire area are opened to traffic of all kinds. Hwy 330 and 18 tend to be testing grounds for vehicles to go as fast as they can possibly go. Drive Defensively at all times, and pull over if safe to do so, to let them pass!!!!
- There is a run on backing accidents with damage to the vehicles. There is no reason this should happen. **Use Backers!!!!!!!**

Prepared by: Steve Ryberg Safety Officer Date: 10/31/07
Linda Szczepanik Deputy Safety Officer

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL BRs	SNAG HAZARDS & GREEN TREE HAZARDS	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p. 80). • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen, clear the area before falling, YELL OUT! • Be especially alert around snags AND green trees during wind events.
ALL	Fire Behavior	<ul style="list-style-type: none"> • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. ▪ Adhere to 10 Std Orders, mitigate 18 situations. Maintain Situational Awareness.
ALL BRs	DRIVING HAZARDS	<ul style="list-style-type: none"> • Both Hwy 330 and 18 have more and more traffic. Watch for the locals not watching the road. • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Media in the work areas • All areas are being opened to the home owners. Drive defensively at all times and give the right away to the home owners. •
ALL	FATIGUE	<ul style="list-style-type: none"> • Be alert for signs of fatigue & take breaks as necessary. Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue.
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones when bucket work in progress. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective.
		<ul style="list-style-type: none"> •
ALL	IMPACTED UTILITIES ELECTRICAL & GAS	<ul style="list-style-type: none"> • Lots of Utility construction going on, stay clear. • Lots of power poles burnt through, wires should be treated as live in the fire area. • Natural gas lines are mostly capped, still potential • Power lines are being re-energized in the fire area.
ALL	MOP UP	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Use all required PPE, especially eye protection. • Maintain proper spacing and overhead clearance. • Hazmat around structures, stay alert • Minimize exposure to smoke, and rotate personnel into clean air when practical. • Evaluate unburned islands/Increase situational awareness.
ALL STRUCTURE E GROUPS	STRUCTURE PROTECTION & HAZMAT ISSUES	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Utilize Structure Assessment Checklist (IRPG p.14). • Follow Structure Protection Guidelines (IRPG p. 16). • Utilize HazMat IC Checklist (IRPG p. 26).
ALL BRs	TREE FELLING	<ul style="list-style-type: none"> • Refer to F.S. Health and Safety Code sections 22.48G. • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Establish traffic control as necessary, keep personnel unnecessary to the operation out of the area.
ALL	SAFETY ZONES	<ul style="list-style-type: none"> • Follow safety zone guidelines (IRPG p. 7) • Limited Safety Zones require additional dedicated LO, and trigger points • Carefully evaluate burned areas before designation as safety zones. • When safety zones are distant from work site, set trigger points to allow personnel to reach them in a timely manner.

--------------	---	---

Fire Suppression Repair Guidelines (Phase I)

Fire suppression repair is a two phase process. Phase I repairs are intended to stabilize the control lines from a hydrologic stand point and prevent unnecessary erosion from occurring while maintaining the fire stopping integrity of the lines. The following Phase I actions will be implemented as soon as the Branch and Division Supervisors authorize it, and prior to the demobilization of the Type II Management Team. (Phase II repairs are generally implemented after the fire is declared controlled or out and are detailed in the Incident Suppression Repair Plan.)

ROADS

1. Existing dirt surfaced roads used for access will be returned as close to pre-incident condition as possible.
2. Existing roads that were closed, but reopened for the current incident will be signed, gated, roped, and/or flagged in such a way that the public will be aware that the route is not open for use. If it is determined that a previously closed road will not be needed by the Type III organization, it will be restored to its pre-fire condition and entry points will be secured.

DOZER LINES

All dozer lines require archaeological and biological surveys prior to rehabilitation. Dozer lines will be treated by pulling outside berms (excluding flammable materials) back into the control line, re-contouring or out-sloping the surface to allow for drainage, and where necessary, placing waterbars. Waterbars will consist of a minimum of a six inch (6") cut into the firm bed of the control line and have a berm with a compacted height of no less than twelve inches (12"). Waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. Where extreme slopes prevent the use of heavy equipment from placing waterbars in control lines, hand crews will be used to perform the necessary erosion control work. When dozer lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge. In some cases, chunking or berming at vehicle access points should be used in combination with the above techniques to prevent access for unauthorized OHV use.

HAND LINES

Hand lines will be repaired to allow for drainage by re-contouring and construction of waterbars. Waterbars for hand lines should be cut to a depth equal to the width of a standard fire shovel. The waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. The outside end of the waterbar must be open and should discharge into an area where the ground surface is protected by vegetation that is unburned, if possible. Trenching and berms, where present, will be removed and any nonflammable topsoil available will be pulled back cross the hand line. When hand lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge.

WATERBARS

Waterbars should be constructed at logical discharge points and guided by the spacing criteria as follows:

Fireline slope %	Maximum Distance Apart (feet)
1-14	150
15-20	90
21-40	50
41+	25

INSTREAM IMPROVEMENTS (WATER SOURCES)

All in-stream facilities and disturbance created by activities to improve water collection for fire suppression will be evaluated and mitigated under the direction of the Resource Advisor and/or designees. These facilities and disturbances include but are not limited to sumps, drafting locations, and intentionally blocked culverts. All building and other materials such as plastics, canvas, plywood, dimension lumber, etc., will be removed from such sites to a suitable disposal site or be recycled. All trash, cardboard, hoses, fittings, and pumps will be removed from the site.

HELISPOTS, HELIPOINTS, SAFETY ISLANDS, DROP POINTS, OTHER CLEARINGS AND IMPROVEMENTS

All clearings constructed to support suppression activities will be returned as closely to pre-incident conditions as is possible. At a minimum, berms will be pulled or raked back into the site, if needed the site will be crowned to facilitate surface drainage and the vegetative material removed from the site will be lopped and scattered over the disturbed area to reduce erosion/unauthorized off-highway-vehicle potential. In some cases, chunking, berming or other barriers may be used in combination with the above techniques to prevent access for unauthorized OHV use. **All areas cleared by heavy equipment must be surveyed for archaeological/biological resources prior to rehabilitation.** Improvements such as fences, gates, guzzlers, flood control basins, drainage structures, drainage channel, culverts, and paved roads damaged by suppression activities will be repaired to pre-fire conditions during Phase I repairs. When dealing with damages to private property or repairs/mitigations to improvements that are beyond the capacity of suppression resources, notify the Resource Advisor and/or designee.

QUESTIONS? Contact a Resource Advisor at 909-844-6684
