Fire Weather Forecast

FORECAST NO: 18

NAME OF FIRE: Slide / Grass Valley **UNIT:** BDF

PREDICTION FOR: 0600 to 1800 PDT Friday
1800 to 0600 PDT Saturday

SHIFT: Day/Night

SHIFT DATE: November 2, 2007

SIGNED:

TIME AND DATE 2000 PDT Thursday
FORECAST ISSUED: November 1, 2007

Dan Harty
Incident Meteorologist

WEATHER DISCUSSION: High pressure will begin to build in over the Great Basin and bring an offshore flow over the fire area today. The offshore flow will result in some slightly warmer and drier conditions with minimum relative humidity down into the mid teens in some locations. Northeast to east winds will develop by afternoon but speeds should remain fairly light until later in the evening. Wind speeds will steadily increase tonight with strongest gusts through and below passes and canyons after midnight ...then peaking out Saturday morning. Relative humidity values will lower into the lower teens on Saturday with some single digits possible. A **Red Flag Warning** is in effect for late Friday night and Saturday due to the gusty winds and very low relative humidity...then continuing on Sunday for long durations of very low relative humidity.

WEATHER FORECAST for Today :

WEATHER: Mostly sunny.

MAXIMUM TEMPERATURES: 68 to 78 degrees.

MINIMUM RELATIVE HUMIDITY: 15 to 23 percent.

20 FT WINDS:

RIDGETOP – Northeast 5 to 10 mph.

SLOPE/VALLEY – East northeast 5 to 10 mph with gusts around 15 mph in the afternoon.

Forecast for Friday night: (OPERATIONAL PERIOD – 1800 PDT 11/2/07 to 0600 PDT 11/3/07)

...Red Flag Warning in effect at 3 am for gusty east northeast winds and very low relative humidity...

Mostly clear. Minimum temperatures...35 to 45 degrees. Maximum RH...40 to 50 percent. Ridgetop winds...Northeast 10 to 20 mph. Slope/Valley winds...East Northeast 10 to 20 mph. Gusts to 25 mph in the evening...increasing to up to 35 mph by sunrise.

Forecast for Saturday: (OPERATIONAL PERIOD – 0600 to 1800 PDT 11/3/07)

...Red Flag Warning in effect for gusty east northeast winds and very low relative humidity...

Mostly sunny. Maximum temperatures...70 to 80 degrees. Minimum RH...8 to 15 percent. Ridgetop winds...East Northeast 10 to 20 mph with gusts around 30 mph...gradually decreasing in the afternoon. Slope/Valley winds...East Northeast 15 to 25 mph with gusts up to 40 mph...gradually decreasing in the afternoon.

Outlook Sunday through Tuesday: Though the gusty winds will subside some...a **Red Flag Warning** is in effect Sunday for long durations of very low relative humidity. The winds will become primarily light and terrain driven by Monday. A ridge of high pressure aloft will remain in place through the period and result in little change in temperatures. Relative humidity should trend slightly higher early next week...but not much. Expect mostly clear skies with only some occasional fair weather high clouds.

FIRE BEHAVIOR FORECAST

| | |
|---------------------------------------|---|
| FORECAST NUMBER: 17 | TYPE OF FIRE: WILDFIRE |
| FIRE NAME: SLIDE / GRASS VALLEY FIRES | OPERATIONAL PERIOD: WEDNESDAY 11/02/07 DAY / NIGHT SHIFT |
| DATE ISSUED: 11/01/07 | TIME ISSUED: 2100 |
| UNIT: SAN BERNARDINO NATIONAL FOREST | SIGNED: <i>Isl Kim Soper - FBAN</i> |

WEATHER SUMMARY:

MIN RH: 15 - 23% daytime, 40 - 50% nighttime

MAX TEMP: 68 - 78 degrees daytime, 35 - 45 degrees nighttime

WINDS (20 FT): NE 5-10 Gusts to 15 - daytime, E - NE 10 -20 Gusts to 35 - nighttime

Weather Discussion: Mostly sunny. High pressure will begin to build over the Great Basin and bring an offshore flow over the fire area today.

**A RED FLAG WARNING IS IN EFFECT FOR LATE FRIDAY NIGHT AND SATURDAY
FOR GUSTY WINDS AND VERY LOW RELATIVE HUMIDITY.**

FIRE BEHAVIOR:

FUELS: Live fuels are critically low due to drought impacts on the vegetation; Most of this fire is burning in vegetation that has not burned in over 50 years. 1000 hour fuels that are burning will continue to burn until total consumption is completed or a fire ending event extinguishes the fire interior to control lines.

WEATHER: Temps, RH's and winds are normal for this time of year and do not contribute to enhanced potential fire behavior. Hotter, dryer, windier conditions will dominate the fire weather picture for the next couple of days.

TOPOGRAPHY: Topography will have little effect on fire behavior within the current fires due to control lines that are in place. Small runs are still possible where slope and continuous fuels are in alignment within interior unburned islands. On any new start watch for alignment high offshore winds on steep slope which will produce rapid rates of spread and extreme fire behavior.

GENERAL: All control lines are in place on the fire. Full containment is close at hand. Some interior burning may still continue to burn until a fire ending event moves over the fire area. All fire lines will be tested starting tonight and into Saturday.

SPECIFIC FIRE BEHAVIOR:

DAY SHIFT - ALL BRANCHES

The fire is inactive near control lines due to the hard work by line resources and excellent mopup standards. Several deep interior unburned islands continue to burn and produce smokes in heavy dead and down fuels and snags. Continue aggressive mop-up and patrols along the control lines which will greatly limit the potential for flare ups near the line. Extreme fire weather is forecasted for Friday night and Saturday which will test all control lines.

NIGHT SHIFT - ALL BRANCHES

All areas in patrol status. No significant fire activity is expected tonight however with the potential for high northeast winds tonight control lines will be tested. Any interior islands may become more active tonight with the expected winds. Pay particular attention when patrolling to control lines in Division I, J, T, U, Y and Z where the winds could blow ambers across the line.

Indicators of Increase Fire Activity

Relative Humidity - Below 25%
Strong Gusty Winds 15 + MPH
High Temperatures - above 70
Unstable atmospheric conditions
Red Flag Warning
Extremely Dry Fuels

Critical Fire Behavior

Probability of Ignition - 75 to 100%
Spotting Distances - ¼ + miles
Extreme Rates of Spread
Multiple tree torching
High Fire Intensity
Crown Fire

SAFETY

AIR OPERATIONS: No adverse smoke impacts from the fire will affect aviation operations.

Line Safety:

- BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR - EXPECT HIGH WINDS!!
- Never go into an area with out establishing your LCES.
- When doing your assignment maintain situational awareness and keep monitoring weather.

A MOMENT FOR SAFETY CAN LAST A LIFETIME.

SAFETY MESSAGE

SLIDE

Nov 2-3, 2007 Day/Night Shift

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONES
WEAR YOUR PERSONAL PROTECTIVE EQUIPMENT DURING ALL OPERATIONS

Brief your crews on all components of the IAP

- ✓ Lookouts are always needed, they must have good situational awareness, and pre-determined trigger points that ensure adequate escape times. Mop Up is still a dangerous time!!
- ✓ Monitor and stay alert of all impacted areas of electrical and gas damaged structures within your work assignment.
- ✓ Situational Awareness- assess and use your IRPG (page 2-3). “Say, what if?” – Situational awareness is all-the-time (slope/topography/terrain, fuels, etc.)
- ✓ Safely maintain your driving speeds and attention at all times. The Hwy’s are open, and very popular.

Recognize what your SA is telling you.....If any of these conflict with your perception.....Review the “**RISK MANAGEMENT PROCESS**”

Risk Mgt. Process:

Step 1: Situation Awareness

- Gather Information
- Scout the fire

Step 2: Hazard Assessment

- Est. potential fire behavior hazards
- Identify tactical hazards

Step 3: Hazard Control

- Establish anchor point
- LCES – MANDATORY

Step 4: Decision Point

- Are controls in place for ID’ed hazards?
- Are selected tactics based on expected fire behavior?
- Have instructions been given and understood?

Step 5: Evaluate

- Self: fatigue, attitude, experience, distracted?
- The situation: what is changing?

Prepared by: **Steve Ryberg, Linda Szczepanik**

Date: 11/01/2007

INCIDENT RISK ANALYSIS (ICS 215a)

| DIV | HAZARDOUS ACTIONS / CONDITIONS | MITIGATIONS / WARNINGS / REMEDIES |
|-----------------------------|---|---|
| ALL | SNAG HAZARDS & GREEN TREE HAZARDS | <ul style="list-style-type: none"> Follow Hazard Tree Safety Guidelines (IRPG p. 80). Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen, clear the area before falling, YELL OUT! Be especially alert around snags AND green trees during wind events. |
| ALL | Fire Behavior | <ul style="list-style-type: none"> Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. <ul style="list-style-type: none"> Adhere to 10 Std Orders, mitigate 18 situations. Maintain Situational Awareness. Take weather ops and watch for the change in the wind direction and speed. |
| ALL | DRIVING HAZARDS | <ul style="list-style-type: none"> Highway 18 and 330 are open to the public, watch your speed don't get caught up in the speed the public is driving at. Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. Utility and the public are in the work areas, show extreme caution around the utility companies and the public. All affected structure areas are open to the land owners and the public. Watch for the public not watching the road. |
| ALL | FATIGUE | <ul style="list-style-type: none"> Monitor resources for level of fatigue. |
| ALL | AIRCRAFT OPERATIONS | <ul style="list-style-type: none"> Keep personnel out of drop zones when bucket work in progress. Use air-to-ground frequency to communicate with aircraft. Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective. |
| | | <ul style="list-style-type: none"> |
| ALL | IMPACTED UTILITIES ELECTRICAL & GAS | <ul style="list-style-type: none"> Lots of Utility construction still going on, stay clear. Natural gas lines are mostly capped, still potential Power lines are re-energized in all of the fire areas. |
| ALL | MOP UP | <ul style="list-style-type: none"> Conduct thorough briefing for all personnel (inside rear cover IRPG). Use all required PPE, especially eye protection. Maintain proper spacing and overhead clearance. Hazmat around structures, stay alert Minimize exposure to smoke, and rotate personnel into clean air when practical. Evaluate unburned islands/Increase situational awareness. |
| ALL STRUCTURE GROUPS | STRUCTURE PROTECTION & HAZMAT ISSUES | <ul style="list-style-type: none"> Conduct thorough briefing for all personnel (inside rear cover IRPG). Utilize Structure Assessment Checklist (IRPG p.14). Follow Structure Protection Guidelines (IRPG p. 16). Utilize HazMat IC Checklist (IRPG p. 26). |
| ALL | TREE FELLING | <ul style="list-style-type: none"> Refer to F.S. Health and Safety Code sections 22.48G. Conduct thorough briefing for all personnel (inside rear cover IRPG). Establish traffic control as necessary, keep personnel unnecessary to the operation out of the area. |
| ALL | SAFETY ZONES | <ul style="list-style-type: none"> Follow safety zone guidelines (IRPG p. 7) Even during Mop Up. Limited Safety Zones require additional dedicated LO, and trigger points Carefully evaluate burned areas before designation as safety zones. When safety zones are distant from work site, set trigger points to allow personnel to reach them in a timely manner. |
