## ***Fire Weather Forecast***

**FORECAST NO:** 21 **NAME OF FIRE:** Slide / Grass Valley **UNIT:** BDF

**PREDICTION FOR:** 0600 to 1800 PDT Monday  
1800 to 0600 PDT Tuesday **SHIFT:** Day/Night

**SHIFT DATE:** November 5, 2007 **SIGNED:**

**TIME AND DATE** 2000 PDT Sunday Dan Harty  
**FORECAST ISSUED:** November 4, 2007 **Incident Meteorologist**

---

**WEATHER DISCUSSION:** After another night of only poor to moderate relative humidity recovery...very dry conditions will continue over the fire area today. A weak disturbance off the coast may spread a few more high clouds across the fire area but expect more sun than yesterday. Winds will remain generally light and terrain driven today with little change in store for Tuesday as well.

---

### **WEATHER FORECAST for Today :**

**WEATHER:** Mostly sunny.

**MAXIMUM TEMPERATURES:** 65 to 75 degrees.

**MINIMUM RELATIVE HUMIDITY:** 15 to 25 percent.

#### **20 FT WINDS:**

**RIDGETOP** – Variable 5 to 10 mph.

**SLOPE/VALLEY** – Upslope/upvalley 4 to 8 mph.

---

### **Forecast for Monday night:** (OPERATIONAL PERIOD – 1800 PDT 11/5/07 to 0600 PDT 11/6/07)

Mostly clear. Minimum temperatures...34 to 44 degrees. Maximum RH...30 to 40 percent...up to 60 percent in favored drainages. Ridgetop winds...variable around 5 mph. Slope/Valley winds...becoming downslope/downvalley 2 to 5 mph.

---

### **Forecast for Tuesday:** (OPERATIONAL PERIOD – 0600 to 1800 PDT 11/6/07)

Mostly sunny. Maximum temperatures...65 to 75 degrees. Minimum RH...18 to 28 percent. Ridgetop winds...variable 5 to 10 mph. Slope/Valley winds...becoming upslope/upvalley 3 to 7 mph.

---

**Outlook Wednesday through Friday:** Little change is expected on Wednesday with dry conditions and light winds. An upper level trough of low pressure is expected to move into the coast on Thursday and cross over the fire area by Friday morning. Moisture is limited with this system and no precipitation is expected. But it should bring some clouds and slight cooling which will help to raise relative humidity values. It will also turn the surface flow onshore with westerly winds increasing over the fire area, but they do not look to be very strong at this time.

# FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER: 20</b>	<b>TYPE OF FIRE: WILDFIRE</b>
<b>FIRE NAME: SLIDE / GRASS VALLEY FIRES</b>	<b>OPERATIONAL PERIOD: Monday 11/05/07-11/06/07 DAY / NIGHT SHIFT</b>
<b>DATE ISSUED: 11/04/07</b>	<b>TIME ISSUED: 2100</b>
<b>UNIT: SAN BERNARDINO NATIONAL FOREST</b>	<b>SIGNED: /s/ Kim Soper - FBAN</b>

## WEATHER SUMMARY:

<b>MIN RH:</b>	15 - 25% daytime, 35 - 45% nighttime.
<b>MAX TEMP:</b>	65 - 75 degrees daytime, 35 - 45 degrees nighttime.
<b>WINDS (20 FT):</b>	Variable 5 - 10 - daytime, downslope / downvalley 2 - 5 - nighttime.
<b>Weather Discussion:</b>	Very dry conditions will continue over the fire area today. A weak disturbance off the coast will send batches of mainly high clouds across the fire area.

## FIRE BEHAVIOR:

<b>FUELS:</b>	Live fuels are critically low due to drought impacts on the vegetation; Most of this fire is burning in vegetation that has not burned in over 50 years. Dead fuel moistures are extremely dry. The 1000 hour fuels are at 9%; 100 hr at 9%; 10 hr is at 6%; and 1 hr is approximately 5%.
<b>WEATHER:</b>	The weather has moderated considerable with cooler temperatures, much lower wind speeds and slightly higher RH's.
<b>TOPOGRAPHY:</b>	Spot fires which cross control lines or new starts could produce fires with rapid rates spread on steep slopes within the fire area.

**GENERAL:** Fire behavior activity will be low today on both fires. Both the Slide and Grass Valley fires have been inactive for the past five days due to allot of the hard work of all the crews. Good solid control lines are currently in place and will continue to hold especially with the mild weather conditions forecasted. 1000 hour fuels will continue to burn interior to control lines until total consumption is achieved or until the fire receives a fire ending weather event.

### Indicators of Increase Fire Activity

Relative Humidity - Below 20%  
Strong Gusty Winds 15 + MPH  
High Temperatures - above 70  
Unstable atmospheric conditions  
Red Flag Warning  
Extremely Dry Fuels  
Direct sunlight aligned with slope

### Critical Fire Behavior

Probability of Ignition - 75 to 100%  
Spotting Distances - 3/4 + miles  
Extreme Rates of Spread  
Multiple tree torching  
High Fire Intensity  
Potential Head Fire ROS greater then 1/2 mile / hour  
Observed Crown Fire

## SPECIFIC FIRE BEHAVIOR:

### DAY SHIFT - All Divisions

Expect minimal fire behavior in all Divisions today due to suppression actions and the lack of fuel availability. Continued mop-up and patrols along control lines will continue to prevent the potential for flare ups near the line which could result in spots across the line. Expect to find lingering hot spots interior to the fire perimeter. Look for the spots associated with stump holes, unburned duff layers, and snags to continue to burn until they fully consume the available fuels.

**Initial Attack Assignments** - Any resources that are dispatched to any new starts will see moderate fire behavior today. Crews should assess the conditions carefully before engaging on new starts, due to extremely dry fuels and steep slopes which will contribute to extreme rates of spread. Fire behavior that can be expected is as follows: **Spotting distances** - short range; **Probability of ignition** - 63%; **Grass Fuel Model** - ROS 1 mi/hr, flame lengths 4 ft; **Brush FM** - ROS 1.23 mi/hr, flame length 23 ft; and **Timber FM** - ROS 225 ft / hr, flame lengths 2 ft.

### NIGHT SHIFT - ALL Divisions

All Divisions are in patrol status. Minimal fire behavior expected tonight. With any new starts you could encounter the following fire behavior: **Spotting distances** - short range; **Probability of ignition** - 53%; **Grass Fuel Model** - ROS 1 mi/hr, flame lengths 4ft; **Brush FM** - ROS 1.25 mi/hr, flame length 23 ft; and **Timber FM** - ROS 225 ft/hr, flame lengths 2ft

## **SAFETY**

**AIR OPERATIONS:** No adverse smoke impacts from the fire will affect aviation operations.

**Line Safety:** BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR

- Never go into an area with out establishing your LCES.

**A MOMENT FOR SAFETY CAN LAST A LIFETIME.**

<b>DIVISION ASSIGNMENT LIST</b>		1. Branch <b>I</b>		2. Division/Group <b>Division E/F</b>

# **S A F E T Y   M E S S A G E**

## **Slide/Grass Valley Fire**

Nov 4-5, 2007 Day/Night Shift

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONE

### **BACK TO BASICS**

#### **Weather and Fire Environment:**

- Shifting and increasing winds, decreasing humidities
- **Red Flag Warning**
- Watch the smoke column for visual clues of changing fire behavior.
- Expect extreme fire behavior if a fire gets established.

#### **Fireline:**

- Identify safety zones carefully, especially along handlines.
- Identify trigger points and lookouts
- Snags and falling green trees are a severe fire line hazard
- Fallers must clear area before dropping trees
- Recheck frequencies

#### **Transportation issues:**

- Lights on, use amber flashers as needed, watch for firefighters on the road.
- Watch for home owners working at their homes. Some homes are right on the roads edge.
- Keep your speed down!
- Utility folks are still in the fire area, watch for large equipment around any corner.
- Park all equipment as far off the road as possible.

#### **Medical**

- Continue to stay hydrated, the weather is cool, but your body still needs water.
- See the Medical Unit as soon as any cold symptoms surface.

Prepared by: Steve Ryberg Safety Officer    Date: 11/3/07  
Linda Szczepanik Deputy Safety Officer

**INCIDENT RISK ANALYSIS (ICS 215a)**

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	<b>SNAG HAZARDS &amp; GREEN TREE HAZARDS</b>	<ul style="list-style-type: none"> <li>Follow Hazard Tree Safety Guidelines (IRPG p. 80).</li> <li>Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen, clear the area before falling, YELL OUT!</li> <li>Be especially alert around snags AND green trees during wind events.</li> </ul>
ALL	<b>Fire Behavior</b>	<ul style="list-style-type: none"> <li>Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift.</li> <li>Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. <ul style="list-style-type: none"> <li>Adhere to 10 Std Orders, mitigate 18 situations. Maintain Situational Awareness.</li> <li>Take weather ops and watch for the change in the wind direction and speed.</li> </ul> </li> </ul>
ALL	<b>DRIVING HAZARDS</b>	<ul style="list-style-type: none"> <li><b>Highway 18 and 330 are open to the public, watch your speed don't get caught up in the speed the public is driving at.</b></li> <li>Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available.</li> <li>Utility and the public are in the work areas, show extreme caution around the utility companies and the public.</li> <li>All affected structure areas are open to the land owners and the public.</li> </ul>
ALL	<b>FATIGUE</b>	<ul style="list-style-type: none"> <li>Monitor resources for level of fatigue.</li> </ul>
ALL	<b>AIRCRAFT OPERATIONS</b>	<ul style="list-style-type: none"> <li>Keep personnel out of drop zones when bucket work in progress.</li> <li>Use air-to-ground frequency to communicate with aircraft.</li> <li>Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective.</li> </ul>
		<ul style="list-style-type: none"> <li></li> </ul>
ALL	<b>IMPACTED UTILITIES ELECTRICAL &amp; GAS</b>	<ul style="list-style-type: none"> <li>Lots of Utility construction still going on stay clear.</li> <li>Natural gas lines are capped, still potential</li> <li>Power lines are re-energized in all of the fire areas.</li> <li>Some propane tanks are in the area, some that are damaged are still being located. <b>ISOLATE AND NOTIFY YOUR DIVISION</b></li> </ul>
ALL	<b>MOP UP</b>	<ul style="list-style-type: none"> <li>Conduct thorough briefing for all personnel (inside rear cover IRPG).</li> <li>Use all required PPE, especially eye protection.</li> <li>Maintain proper spacing and overhead clearance.</li> <li>Hazmat around structures, stay alert</li> <li>Minimize exposure to smoke, and rotate personnel into clean air when practical.</li> <li>Evaluate unburned islands/Increase situational awareness.</li> </ul>
ALL	<b>STRUCTURE PROTECTION &amp; HAZMAT ISSUES</b>	<ul style="list-style-type: none"> <li>Conduct thorough briefing for all personnel (inside rear cover IRPG).</li> <li>Utilize HazMat IC Checklist (IRPG p. 26).</li> <li>Advise home owners of hazards associated with lost structures.</li> </ul>
ALL	<b>TREE FELLING</b>	<ul style="list-style-type: none"> <li>Refer to F.S. Health and Safety Code sections 22.48G.</li> <li>Conduct thorough briefing for all personnel (inside rear cover IRPG).</li> <li>Establish traffic control as necessary, keep personnel unnecessary to the operation out of the area.</li> <li>Utilize professional fallers when in doubt of the tree.</li> </ul>
ALL	<b>SAFETY ZONES</b>	<ul style="list-style-type: none"> <li>Follow safety zone guidelines (IRPG p. 7) Even during Mop Up.</li> <li><b>Limited Safety Zones require additional dedicated LO, and trigger points</b></li> <li>Carefully evaluate burned areas before designation as safety zones.</li> <li>When safety zones are distant from work site, set trigger points to allow personnel to reach them in a timely manner.</li> </ul>

## Fire Suppression Repair Guidelines (Phase I)

Fire suppression repair is a two phase process. Phase I repairs are intended to stabilize the control lines from a hydrologic stand point and prevent unnecessary erosion from occurring while maintaining the fire stopping integrity of the lines. The following Phase I actions will be implemented as soon as the Branch and Division Supervisors authorize it, and prior to the demobilization of the Type II Management Team. (Phase II repairs are generally implemented after the fire is declared controlled or out and are detailed in the Incident Suppression Repair Plan.)

### ROADS

1. Existing dirt surfaced roads used for access will be returned as close to pre-incident condition as possible.
2. Existing roads that were closed, but reopened for the current incident will be signed, gated, roped, and/or flagged in such a way that the public will be aware that the route is not open for use. If it is determined that a previously closed road will not be needed by the Type III organization, it will be restored to its pre-fire condition and entry points will be secured.

### DOZER LINES

**All dozer lines require archaeological and biological surveys prior to rehabilitation.** Dozer lines will be treated by pulling outside berms (excluding flammable materials) back into the control line, re-contouring or out-sloping the surface to allow for drainage, and where necessary, placing waterbars. Waterbars will consist of a minimum of a six inch (6") cut into the firm bed of the control line and have a berm with a compacted height of no less than twelve inches (12"). Waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. Where extreme slopes prevent the use of heavy equipment from placing waterbars in control lines, hand crews will be used to perform the necessary erosion control work. When dozer lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge. In some cases, chunking or berming at vehicle access points should be used in combination with the above techniques to prevent access for unauthorized OHV use.

### HAND LINES

Hand lines will be repaired to allow for drainage by re-contouring and construction of waterbars. Waterbars for hand lines should be cut to a depth equal to the width of a standard fire shovel. The waterbars will be constructed diagonally across the control line at an angle of thirty-five to forty degrees. The outside end of the waterbar must be open and should discharge into an area where the ground surface is protected by vegetation that is unburned, if possible. Trenching and berms, where present, will be removed and any nonflammable topsoil available will be pulled back cross the hand line. When hand lines follow a ridge where there is no vegetation on either side, or where there is unburned vegetation on both sides (indirect line), re-contouring and waterbars should be designed to divert water equally to both sides of the ridge.

### WATERBARS

Waterbars should be constructed at logical discharge points and guided by the spacing criteria as follows:

Fireline slope %	Maximum Distance Apart (feet)
1-14 .....	150
15-20 .....	90
21-40 .....	50
41+ .....	25

### INSTREAM IMPROVEMENTS (WATER SOURCES)

All in-stream facilities and disturbance created by activities to improve water collection for fire suppression will be evaluated and mitigated under the direction of the Resource Advisor and/or designees. These facilities and disturbances include but are not limited to sumps, drafting locations, and intentionally blocked culverts. All building and other materials such as plastics, canvas, plywood, dimension lumber, etc., will be removed from such sites to a suitable disposal site or be recycled. All trash, cardboard, hoses, fittings, and pumps will be removed from the site.

### HELISPOTS, HELIPOINTS, SAFETY ISLANDS, DROP POINTS, OTHER CLEARINGS AND IMPROVEMENTS

All clearings constructed to support suppression activities will be returned as closely to pre-incident conditions as is possible. At a minimum, berms will be pulled or raked back into the site, if needed the site will be crowned to facilitate surface drainage and the vegetative material removed from the site will be lopped and scattered over the disturbed area to reduce erosion/unauthorized off-highway-vehicle potential. In some cases, chunking, berming or other barriers may be used in combination with the above techniques to prevent access for unauthorized OHV use. **All areas cleared by heavy equipment must be surveyed for archaeological/biological resources prior to rehabilitation.** Improvements such as fences, gates, guzzlers, flood control basins, drainage structures, drainage channel, culverts, and paved roads damaged by suppression activities will be repaired to pre-fire conditions during Phase I repairs. When dealing with damages to private property or repairs/mitigations to improvements that are beyond the capacity of suppression resources, notify the Resource Advisor and/or designee.
