Fire Behavior Forecast Number 50

Name of Fire: Zaca

Location: Los Padres NF

Prediction For: 24 hours

Tom Leuschen - Fire Behavior Analyst

Weather Summary: See weather forecast:

ERC – 65 at about 95 percentile setting a record for today!

Fire Behavior

General: *Potential Fine Fuel Moisture remains at 3% and Probability of Ignition at 70%*

Keep monitoring unburned fuels between the fire and the line, there are several pockets with potential for runs. Continue to monitor the Probability of Ignition on the north slopes to know when it reaches 60%, which indicates a high risk environment for rapid rates of spread and extreme fire behavior. Where wind, slope and fuels align expect rates of spread to be from **100 - 250 ch/hr**. Flame lengths could reach **25-40ft**. Water drops have been effective holding the fire along topographical boundaries in all fuels. Daily upslope winds are dependant on solar heating and shading, therefore aspect becomes very important to monitor throughout the day.

Specific:

Div M, N,O,P,Q,R,S,T – Patrol for flare-ups & spots. There are some interior islands of unburned fuels that will continue to actively back in Santa Cruz drainage that can position itself in the next few days to make a run at the line in Division Q. It may be best to let this burn itself out. It is unlikely to spot, but possible.

Div, UU – The fire has burned out the majority of the fuels and most areas are cool. Be alert to active fire on neighboring Divisions.

Div TT– Large green areas adjacent to the line are showing smoke but appear to have been underburned. Continue to monitor these areas for increased fire activity. Those areas that are out of reach of hoses should be allowed to burn up. They are unlikely to make a run at the line. If they do, treat the fuels outside the fireline with water and/or retardant to prevent spots from occurring.

Div VV, ZZ – Continue to monitor areas of unburned fuels. The higher nighttime relative humidities should start putting any residual smokes out.

Recovery Group – Be sure to keep in touch with the Branch director for any new fire activity!

Air Operations: Air operations will be hampered until about 0800 due to smoke and some gusty winds over the ridges will create turbulence and difficult flying conditions

Safety: Common Denominators on Tragedy Fires; (pg 4 IRPG)

On deceptively quiet areas of large fires.

In relatively light fuels such as brush.

When there is an unexpected shift in wind direction or speed.

When fire responds to topographic conditions & runs uphill.

DAY OPERATIONS

ATTENTION TO SAFETY **IS IMPORTANT!!!!**

Follow the Medical Plan (206) closely! In an emergency, limit radio traffic to those identified in the plan.

HEADS UP

Stay focused on the job, complacency can be a killer. Have tailboard safety talks as the assignment changes during the day. Keep your crew hydrated and healthy. Keep an eye on each other. Remember, this is a team effort. Keep 220 feet from equipment. Make sure the operator know you're in the area.

**L
C
E
S**

Environmental concerns are everywhere. Steep terrain, rolling burning material, and frequent scree areas. **DO NOT PARK NEAR ROCK SLIDES.** Move cautiously when entering unfamiliar and unscouted areas. Clearly mark hazards as a reminder for all.
