FIRE BEHAVIOR FORECAST

FORECAST NUMBER 11	TYPE OF INCIDENT: Wildland Fire
INCIDENT NAME: Lodgepole	OPERATIONAL PERIOD Day & night, 8/2/13
DATE ISSUED: 1 August 2013	TIME ISSUED: 2000
UNIT: Salmon-Challis NF	SIGNED  Ken Loda, FBAN

INPUTS

WEATHER SUMMARY See the preceding Fire Weather Forecast.

FUELS CONDITIONS Fuel moisture: One-hour fuel moisture can be expected to be about 15% at 0700. That will drop to about 4% from about 1200 to 1700. The 10-hour fuels are at 5%, and 100-hour fuels are about 5%, and the 1000-hours are about 8%. After 1700 the fuel moistures will slowly add 7% through the night. Live fuel moisture: The live fuel moisture is around 117 – 160% in conifers, about 94% – 125% in the shrubs. However, this varies with elevation, aspect, and setting.

OUTPUTS

GENERAL FIRE BEHAVIOR Higher relative humidity overnight will suppress the availability of fine fuels for burning, and may frustrate some firing operations until late in the day shift. The heavier fuels (100- and 1000-hours) are little influenced by changes in relative humidity, and in their present condition continue to burn to some extent through the night. When winds align with slopes overall behavior may become extreme. Today's Haines index daytime is 4 – low, during the night 3 – very low.

Day Shift:

Fuel Model		ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
		Head (Mid/Max)	Backing	Head(Mid/Max)	Backing		
Timber with shrub understory	valleys	10/14	1	8/9	3	70%	.2-.3 mile
	ridges	15/23	1	9/11	3	70%	.4-.6 mile
Grass/Brush		7/9	1	2/2	2	70%	.1 mile

Fire behavior predictions are for the hottest and driest period of the day with mid-range and maximum winds.

Night Shift (after 2000):

Fuel Model		ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
		Head (Mid/Max)	Backing	Head(Mid/Max)	Backing		
Timber w/ shrub understory		7/8	1	7/8	1	20%	.3 mile
Grass/Brush		5/5	1	1/1	1	20%	NA

Thunderstorm related conditions:

Fuel Model		ROS (ch/hr)		Flame Length (ft)		PIG	Spot_Dist
		Head	Backing	Head	Backing		
Timber w/ shrub understory		32	1	13	3	see	.8 mile
Grass/Brush		9	1	2	2	above	.1 mile

SPECIFIC FIRE BEHAVIOR

Spotting: Rollout, torching and spotting are likely throughout the day.

Crown fire potential: Short crown runs are possible, but only in gusts higher than 30 mph or on extreme slopes. Rates of spread of a crown fire would be up to 138 chains per hour in the thunderstorm gusts.

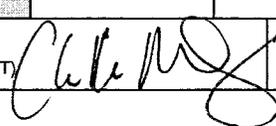

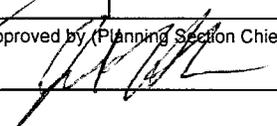

SAFETY

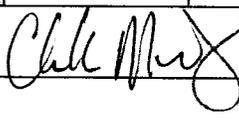

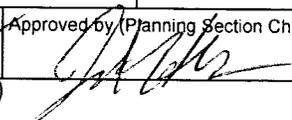

SAFETY Be aware of gusty and erratic winds associated the competition between the general winds and the terrain winds. Watch for torching and spotting that may occur and travel in unexpected directions. Maintain situational awareness.

AIR OPERATIONS Gusty winds may inhibit effective air operations in the afternoon.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W" depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

MOP-UP AND REHABILITATION STANDARDS
Lodgepole Fire
ID-SCF-013165

Fireline Rehabilitation Standards

Standards for rehabilitation are outlined below. More detailed rehabilitation standards are provided to the DIVS for further clarifications.

Dozer Line

- Stream crossings, if any, will have natural flow pattern restored.
- Water bars should be constructed to direct water away from the constructed line.
- Berms will be removed and spread back over the suppression line to allow surface water to freely drain off suppression lines.
- Lop trees and brush cut for the line to within 2 feet of the ground surface.
- Pull brush and other vegetation debris back over re-contoured lines.
- Map the locations of all mechanical fireline.

Hand Lines

- Space water bars the same as for dozer lines.
- Depth for water bars should be 4-6 inches.
- Pull berms back into lines.
- Lop trees and brush cut for the line to within 2 feet of the ground surface.
- Low cut stumps 8" or lower.
- Pick up all flagging, litter, trash and pack it out for proper disposal.

Spike Camps and Helispots

- Lop trees and brush to within 2 feet of the ground surface.
- Scatter cut vegetation debris over impact area.
- Pick up all flagging, litter, trash and pack it out for proper disposal.
- Low cut stumps 8" or lower.

Line Rehab

Water bars will be spaced on slopes as follows:

6%	200 feet
10-20%	160 feet
20-30%	110 feet
30-40%	80 feet
40-50%	60 feet
50-60%	45 feet
60+	30 feet
