Comments /notes on tonight's mission and this interpretation:

Started tonight's interpretation with previous nights IR perimeter (79 Acres).

Considerable more heat than last night and perimeter growth was associated with the southern half of the heat perimeter and the southern most spot fire.

Intense heat along southwest perimeter and in the sothern spot fire. General cooling in the central interior with pockets of scattered heat in the northern perimeter. Isolated heat in the interior and 2 isolated heat sources in the spot largest spot fire perimeter to the east.
