## Fire Behavior Forecast

<b><u>Forecast No. 39</u></b>	<b><u>Prediction for Day Shift</u></b>
<b><u>Name of Fire: Big Turnaround Complex</u></b>	<b><u>Shift Date: May 28, 2007</u></b>
<b><u>Time and Date Forecast Issued</u></b> <b><u>1800 hrs 5/27/2007</u></b>	<b><u>Signed : Stewart Turner</u></b> <b><u>Fire Behavior Analyst</u></b>

### **Weather Summary (See Detailed Weather Forecast in the IAP):**

Partly cloudy with temperatures reaching the high 80's. Minimum relative humidity will range from 32-38%. East winds will range from 5-10 mph sustained in the afternoon. A Haines index of 4 and a dispersion index of 65 are forecast.

**General Fire Behavior:** The morning hours will be spent burning off the recovery until 0930-1000 hours then expect to see more activity and smoke. The swamp fuels have dried and are again becoming active during the burning period. When the clouds dissipate around 1600 fire behavior will greatly increase. Moderate fire behavior after the morning inversion breaks around 0930. Fire behavior will increase to active by 1100 and very active during the peak hours 1600 through 2000 hrs. Anticipate and plan for very active to extreme fire behavior with any head fire. During peak hours swamp shrub and swamp bay fuels will burn intensely on the surface producing 8 to 15 foot lengths and spread rates of 10 to 12 feet/minute. Brisk east winds will facilitate torching and short range spotting out to 100 yards. The swamp fuels will produce moderate backing spread rates of 2-4 feet/minute. During peak burning hours, pine fuels will spread at 60-80 feet/minute with very high intensities in the palmetto/gallberry rough (15-30 ft flame lengths). Single tree and group torching in open canopy pine can produce spotting out to 300 yards. Young, closed canopy pine plantations (5-10yrs) have the potential to support sustained crown fire. Probability of ignition will be 70% during the peak burning period.

### **Specific Fire Behavior:**

**Branch I:** Interior smoke is common throughout this Branch. Needle cast and rekindle will continue to cause control problems in this branch. Needle cast has covered the ground in many areas, causing spot fires throughout the Branch. Low to moderate intensity burnout along portions of the swamp edge break from DIV F to the branch break has created a high potential for reburn.

**Branch II:** The slot between the active fire and the Chesser burnout is closing quickly. Moderate to very active fire behavior was observed from both areas. The active fire continues to move toward the swamp edge break. The burnout in the Roasting Ear Island area continues to back aggressively towards the east and south. The fire edge will continue to back to the East in DIV G-J. Some of the fire is being held by Bee Gum but it will out flank Bee Gum to the south. Backing spread during peak hours in the swamp shrub will range from 2-4 feet/minute moving near 1/3-1/2 mile per day. DIV K will continue to have reburn potential in the needle cast.

**Air Operations:** Inversions will persist until 0900. No restrictions to air operations due to smoke or winds

### **Safety: FIRE BEHAVIOR**

1. Keep informed on FIRE WEATHER conditions and forecasts.
2. Know what your FIRE is doing at all times, observe personally and use scouts.
3. Base all actions on current and expected FIRE BEHAVIOR.
