FIRE BEHAVIOR FORECAST

Fire: Honey Prairie Complex	Unit: GA-OKR-000001	Prediction for Day Shift
Forecast #89 Issued: 08/04/2011 1830 hrs	Signed: Keith Mousel	Shift Date: Friday 08/05/2011

GENERAL FIRE BEHAVIOR

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

Indicators/Threshold for Increased Fire Activity

- **Relative humidity dropping below 45%**
- Winds above 10 mph
- **Heavy fuel loadings**
- **Fine dead fuel moisture 8% or less**
- Dispersion above 70
- *** Items in BOLD are predicted to occur today***

SPECIFIC FIRE BEHAVIOR

- **Fire behavior activity will continue to heat up during this drying trend.**
- **Interior smoldering and some flare ups are possible, especially if winds increase.**
- **Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths. LAL 1**

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 4 - 8 mph				
Shrub Fuels – SH4	1 – 3 ch/hr	1 – 2 feet	1/10 mile	52 %
Heavy Southern Rough- SH8	3 – 7 ch/hr	3 – 6 feet	1/10 mile	52 %
Timber Litter-Reburn TL8	1 – 3 ch/hr	1 – 2 feet	1/10 mile	52 %
Small Pine Plantation w/grasses GR5	3 – 7 ch/hr	1 – 4 feet	1/10 mile	52 %

One hour fine dead fuel moisture is at 8% for Friday. Areas remain dry and burning continues. 1,000 hour fuels are drier than normal for this time of year. There is re-burn potential; mainly on the west side of the fire due to the amount of needle cast, fallen trees and scorched shrubs. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. **In areas where fuels have been herbicided, expect quick ignitions, extreme heat, quicker rates-of-spread, and possible group tree torching potentially producing spotting problems.**

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

All Divisions:

*The fire continues a slow spread through the thick bays and muck soils. Roots and fallen trees are protecting heat sources allowing the fire to burn organic soils from the bottom up. Be heads-up for falling trees. **50% chance of rain.***

Remember that most accidents occur on small fires or deceptively quiet areas of large fires.

**WATCHOUT SITUATION # 14
WEATHER IS GETTING HOTTER AND DRIER**

Air Operations: Expect possible areas of smoke especially on the west and north side of the fire.

SAFETY:

WINDS – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS** - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **Live Trees/SNAGS** – are falling in all Divisions – will be influenced by Thunderstorm outflow winds. **FUELS:** Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor, re-burn is still possible. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. 100 and 1000 hour fuels are still below average in moisture content. Stay focused, and put LCES in place before starting operations. *Energy Release Component (ERC) is running near average for this time of year.*

Safety Message

INCIDENT: Honey Prairie Fire

DATE: 08/05/2011

TIME: 0800

Major Hazards and Risks:

Demob / Travel, Hot Weather / Hydration, Transition, and Complacency

Demob / Travel – If you are driving home, get plenty of rest the night before (8 hours required). Wear your seatbelt and make frequent stops to stay alert. Take turns driving if you have a partner.

Hot Weather / Hydration – We have been experiencing record high temperatures with heat indexes from 105-115. Your body rapidly loses water in these conditions. Drink water early and often – eat often but in moderation to maintain sodium and other vital mineral levels. Take frequent rest breaks and share the workload.

Transition – Many personnel will be transitioning with replacements over the next couple of days. Make notes of pertinent information that you need to pass along to replacement forces. Keep in mind the information you would want to get if you were just checking in to the incident. Good communication with these resources will be key to a safe and seamless transition

Complacency – Let's not forget why we are here – there is still fire out there. Keep your head in the game and don't lose sight of our main objective -- **EVERYONE GOES HOME SAFE**

Have a Safe Trip Home!

Your assignment doesn't end until You arrive home safely.

Drive defensively. Human nature ensures we are less patient when driving home; don't let impatience cause unsafe behavior.

Always obey the speed limit.

Everyone in the vehicle will wear seat belts any time the vehicle is moving. **IT'S THE LAW!**

No driver will drive more than 10 hours (behind the wheel) Within any duty-day.

Multiple drivers in a single vehicle may drive up to the duty-day limitation (16 hours) provided no driver exceeds the individual driving (behind the wheel) time limitation of 10 hours.

Do not drive past 2200 hours.

To manage fatigue, take frequent stretch breaks every 2-3 hours of driving.

Do not eat and drive at the same time.

Don't use the cell phone while driving, pull off the road or call during your stretch breaks.

Current national interagency 2-to-1 work-rest policy applies. Demobilization is neither immediate nor critical activity.

Stay Hydrated !

Your life depends on it!

Safety Officers: Shane Barrow & Tom Lail

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.
