**FIRE BEHAVIOR FORECAST**

<b>Fire: Honey Prairie Complex</b>	<b>Unit: GA-OKR-000001</b>	<b>Prediction for Day Shift</b>
<b>Forecast # 56 Issued: 07/02/2011 1830 hrs</b>	<b>Signed: Gary Brunk/Steve Cobb(T)</b>	<b>Shift Date: Sunday 07/03/11</b>

**GENERAL FIRE BEHAVIOR**

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp. As fire transitions to the upland, torching and crown fires are common. Long Range spotting is possible.

**Indicators/Threshold for Increased Fire Activity**

- Relative humidity dropping below 45%
- Winds above 10 mph
- Heavy fuel loadings
- Fine dead fuel moisture 8% or less
- Dispersion above 70

**SPECIFIC FIRE BEHAVIOR**

- **Fire behavior today should be similar to yesterday. Unburned surface fuels within the fire perimeter will actively burn with the continued warm and dry conditions. Expect similar RH's and wind speeds as yesterday. Stay alert for more re-burns to occur today.**
- **Pockets of heat near the fire perimeter in Divisions Y & Z will become active by late morning. The fire is burning more intensely each day. The possibility for short to mid range spotting continues where these fuels are exposed to stronger winds (generally considered to be 10mph MFWS). EXPECT DRYING TREND TO LAST THROUGH MONDAY.**

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 8 – 12, G18 mph @ 20"				
Shrub Fuels	14– 22, 34 ch/hr.	11 – 17 feet	3/10 – 6/10 mile	78%
<b>Southern Rough</b>	<b>23 – 38, 65 ch/hr</b>	<b>7- 12 feet</b>	<b>3/10 – 6/10 mile</b>	<b>79%</b>
Timber Litter-Reburn	2-3, 5, ch/hr.	2-4 feet	3/10 – 6/10 mile	79%
Small Pine Plantation w/grasses	22-36, 63 ch/hr	7- 13 feet	2/10 – 4/10 mile	80%

**One hour fine dead fuel moisture is at 4% for Sunday.** 1000 hour fuels are drier than normal for this time of year. Extensive mop up is required. There is reburn potential in all divisions due to the amount of needle cast.

Should a fire run(s) occur, expect winds in the area to potentially increase above predicted levels. This would increase Flame Lengths and ROS above predictions. Heavier firebrands can also be lifted higher and further increasing likelihood of spots to max predictions. In areas where fuels have been herbicided, expect quick ignitions and extreme heat, very fast.

**NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.**

West	A	Reburn potential with accumulation of leaves and red needles. Falling snags still pose a threat to fire personnel and the boardwalk. <b>South East Winds Today</b>	West	T/V	If SE winds align today, pay attention to the possibility of the fire pushing towards the division's perimeter. <b>South East Winds Today</b>
	B-G	Warmer wx increases reburn potential from needle cast. Be heads-up for falling Snags. <b>South East Winds Today</b>			
	Y-Z	Expect continued drying on Sunday and an increase in fire behavior. <b>South Easterly winds are forecast Today-Monday. Spotting potential increases as fuels dry.</b>	East	H, I J, K L, M N, O	Potential for reburn in pine stands from needle cast. Watch for falling snags. Winds should be favorable today for the entire Branch.

**Night Ops** – Expect another night of reduced fire behavior after 2200. Areas of patchy fog will develop. Fire behavior will primarily be limited to burning out heavy fuels Divisions Y & Z and the interior. RH's will recover from 90 – 100%. Winds over the entire fire are forecast from the ESE at 4-8 mph becoming variable to 2 mph after midnight. Dispersion Index of 2 –poor for nighttime. **Remain with heads up for Thunderstorms & Lightning – LAL 1.**

**Air Operations:** Patchy fog before 0900 becoming partly cloudy. Mixing heights will be 7000 feet by 1500.

**SAFETY:**

**WINDS** – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS** - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **SNAGS – Snags are falling in all Divisions – will be influenced by Thunderstorm outflow winds.**

**FUELS:** Reburn is an issue. Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor. 1000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. Stay focused, and put LCES in place before starting operations. Watch for standing burning snags that can fall without warning. *Energy Release Component (ERC) continues to be above the 90<sup>th</sup> percentile for this area.*

## SAFETY MESSAGE

### HAZARDS AND MITIGATIONS

**1. Hazard:** Heavy traffic and decreased visibility on roads in the fire area.

**Mitigation:** Continue to drive defensively and obey traffic regulations. Stop, Look, and Listen at unmarked R/R crossings. Utilize proper following distances (1 second/10mph).

**2. Hazard:** Potential for increased fire behavior.

**Mitigation:** "Listen for the Alarm". Watch for changing conditions, be aware of "watch out" situations, and be alert to indicators of problem fire behavior.

**3. Hazard:** Higher temperatures will promote dehydration

**Mitigation:** Drink WATER continuously prior to, during and after shift to ensure hydration. Remember-coffee and carbonated drinks can contribute to dehydration as well, so more water intake is required to stay properly hydrated.

### COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

- Most incidents happen on smaller fires or isolated portions of larger fires.
  - Fires respond quickly to shifts in wind direction or wind speed.
  - Flare-ups generally occur in deceptively light fuels.
  - Fires run uphill surprisingly fast in chimneys, gullies, and on steep slopes.
- Some suppression tools, most notably helicopters and air tankers, can adversely affect fire behavior. The blasts of air from low flying helicopters and air tankers have been known to cause flare-ups and cause weak trees to fall.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an “N” or a “W”, depending on whether the frequency is narrow or wide band. **Mode** refers to either “A” or “D” indicating analog or digital (e.g. Project 25) or “M” indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.
