FIRE BEHAVIOR FORECAST

Fire: Honey Prairie Complex	Unit: GA-OKR-000001	Prediction for Day Shift
Forecast #60 Issued: 07/06/2011 1830 hrs	Signed: /S/ Gary Brunk /S/Steve Cobb(T)	Shift Date: Thursday 07/07/11

GENERAL FIRE BEHAVIOR

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp. As fire transitions to the upland, torching and crown fires are common. Long Range spotting is possible.

Indicators/Threshold for Increased Fire Activity

- Relative humidity dropping below 45%
- Winds above 10 mph
- **Heavy fuel loadings**
- **Fine dead fuel moisture 8% or less**
- Dispersion above 70
- *** Items in BOLD are predicted to occur today***

SPECIFIC FIRE BEHAVIOR

- **Fire behavior today will be moderated due to isolated areas of moisture received over the evening and increased cloud cover over the fire area.**
- **Areas which have shown active fire behavior over the past several days will continue to burn where they did not receive moisture. Expect to see low rates of spread and reduced flame lengths. Limited torching will still be possible where fuels have been sheltered from rainfall.**

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 5-8 G14 @ 20'				
Shrub Fuels	2-8 ch/hr	2-5 feet	1/10 – 2/10 mile	50%
Southern Rough	3-6 ch/hr	3-7 feet	1/10 – 2/10 mile	50%
Timber Litter-Reburn	1-2 ch/hr	1-2 feet	1/10 – 2/10 mile	50%
Small Pine Plantation w/grasses	2-8 ch/hr	2-4 feet	1/10 – 2/10 mile	50%

One hour fine dead fuel moisture is at 7% for Thursday. 1000 hour fuels are drier than normal for this time of year. There is reburn potential in all divisions due to the amount of needle cast. Should a fire run(s) occur, expect winds in the area to potentially increase above predicted levels. This would increase Flame Lengths and ROS above predictions. Heavier firebrands can also be lifted higher and further increasing likelihood of spots to max predictions. **In areas where fuels have been herbicided, expect quick ignitions and extreme heat, very fast and group tree torching producing spotting problems.**

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

West	A	<i>Wetter wx reduces reburn potential. Falling snags still pose a threat to fire personnel and the boardwalk. ESE Winds Today after 1800</i>	West	T/V	<i>Active fire spread to the North will be reduced due to increased moisture overnight and through the day. ESE Winds Today after 1800</i>
	B-G	<i>Wetter wx decreases reburn potential from needle cast. Be heads-up for falling Snags. ESE Winds Today after 1800</i>			
	Y-Z	<i>Reduced fire activity will occur today. Areas of heat will remain near the line near the Div Y/Z perimeter. ESE winds are forecast after 1800.</i>	East	H, I J, K L, M N, O	<i>Div 0 – Recent moisture will reduce the potential for the active pocket of fire located West of the line to move North. ESE Winds Today after 1800</i>

Night Ops – Expect another night of minimal fire behavior. Patchy fog developing after 0200. Fire behavior will primarily be limited to burning out heavy fuels in Divisions Y & Z and the interior. RH's will recover to 90 – 100 after midnight. Winds over the entire fire are forecast from the ESE at 4-8 mph becoming variable to 2 mph. Dispersion Index of 2 –poor for nighttime.

Air Operations: Expect morning fog and areas with heavy smoke all day.

SAFETY:

WINDS – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS** - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **SNAGS** – Snags are falling in all Divisions – will be influenced by Thunderstorm outflow winds.

FUELS: Reburn is an issue. Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor. 1000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. Stay focused, and put LCES in place before starting operations. Watch for standing burning snags that can fall without warning. *Energy Release Component (ERC) continues to be above the 90th percentile for this area.*

SAFETY MESSAGE

SAFETY IS OUR FIRST PRIORITY

Fire fighter safety comes first on every fire, every time

SAFETY THOUGHT

Safety is not "someone else's" job.

MAJOR HAZARDS AND RISKS		
<ul style="list-style-type: none"> • FATIGUE and DEHYDRATION • SNAGS • WILDLIFE • SLIP, TRIP, and FALL 	<ul style="list-style-type: none"> • VEHICLE TRAVEL TIME, DISTANCE, and SPEED • SPOTTING, TORCHING and RE-BURN POTENTIAL 	<ul style="list-style-type: none"> • LIGHTNING, ERRATIC WIND, DOWNDRAFTS, and RAIN • EXTREME FIRE BEHAVIOR, BLOW-UP CONDITIONS

PERSONAL HYGIENE

- The most important thing that you can do to keep from getting sick is to wash your hands. By frequently washing your hands you wash away germs that you have picked up from other people, or from contaminated surfaces, or from animals and animal waste. If you don't wash, then you may infect yourself when you touch your eyes, or your nose, or your mouth.
- One of the most common ways people catch colds is by rubbing their nose or their eyes after their hands have been contaminated with the cold virus. You can also spread germs directly to others or onto surfaces that other people touch. And before you know it, everybody around you is getting sick.
- The important thing to remember is that, in addition to colds, some pretty serious diseases -- like hepatitis A, meningitis, and infectious diarrhea -- can easily be prevented if people make a habit of washing their hands.

COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

- Most incidents happen on smaller fires or isolated portions of larger fires.
- Fires respond quickly to shifts in wind direction or wind speed.
- Flare-ups generally occur in deceptively light fuels.
- Fires run uphill surprisingly fast in chimneys, gullies, and on steep slopes.
- Some suppression tools, most notably helicopters and air tankers, can adversely affect fire behavior. The blasts of air from low flying helicopters and air tankers have been known to cause flare-ups and cause weak trees to fall.

PERSONAL CONDUCT

Mutual respect for your crew members, other crew members, and the public is the cornerstone for creating the high standards of conduct we are asking you to maintain while you are here.

- **Illegal drugs and alcohol are not permitted at the incident.** Possession or use of these substances will result in disciplinary action. Using intoxicating beverages or narcotic drugs on government-owned or leased property, or transporting such beverages or drugs, at any time, in a government provided vehicle is prohibited conduct.
- **Any form of harassment, including racial discrimination and sexual harassment is prohibited and will not be condoned.** The policy in this matter is straight-forward—the ICT has a zero-tolerance policy.
- **Condoning misconduct by either not intervening or failing to report it may result in disciplinary action.** Allowing misconduct to continue, especially in fire situations may jeopardize the safety of the entire crew and others as well

We ask your assistance in achieving our safety and effectiveness goals. You can help by controlling yourself and by observing others in all matters concerning the safe and effective operation of your crew. Your cooperation will be most appreciated.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.
