**FIRE BEHAVIOR FORECAST**

<b>Fire: Honey Prairie Complex</b>	<b>Unit: GA-OKR-000001</b>	<b>Prediction for Day Shift</b>
<b>Forecast #90 Issued: 08/05/2011 1830 hrs</b>	<b>Signed: Keith Mousel</b>	<b>Shift Date: Saturday 08/06/2011</b>

**GENERAL FIRE BEHAVIOR**

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

**Indicators/Threshold for Increased Fire Activity**

- Relative humidity dropping below 45%
- Winds above 10 mph
- **Heavy fuel loadings**
- **Fine dead fuel moisture 8% or less**
- Dispersion above 70
- **\* Items in BOLD are predicted to occur today\***

**SPECIFIC FIRE BEHAVIOR**

- **Fire behavior activity will continue to heat up during this drying trend.**
- **Interior smoldering and some flare ups are possible, especially if winds increase.**
- **Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths. LAL 3**

<b>Fuel Type</b>	<b>Rates of Spread</b>	<b>Flame Length</b>	<b>Spotting Distance</b>	<b>Firebrand Ignition</b>
<b>Winds at 4 - 8 mph</b>				
Shrub Fuels – SH4	1 – 3 ch/hr	1 – 2 feet	1/10 mile	52 %
Heavy Southern Rough- SH8	3 – 7 ch/hr	3 – 6 feet	1/10 mile	52 %
Timber Litter-Reburn TL8	1 – 3 ch/hr	1 – 2 feet	1/10 mile	52 %
Small Pine Plantation w/grasses GR5	3 – 7 ch/hr	1 – 4 feet	1/10 mile	52 %

**One hour fine dead fuel moisture is at 8% for Saturday.** Areas remain dry and burning continues. 1,000 hour fuels are drier than normal for this time of year. There is re-burn potential; mainly on the west side of the fire due to the amount of needle cast, fallen trees and scorched shrubs. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. **In areas where fuels have been herbicided, expect quick ignitions, extreme heat, quicker rates-of-spread, and possible group tree torching potentially producing spotting problems.**

**NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.**

**All Divisions:**

*The fire continues a slow spread through the thick bays and muck soils. Roots and fallen trees are protecting heat sources allowing the fire to burn organic soils from the bottom up. Be heads-up for falling trees. **30% chance of rain.***

**Remember that most accidents occur on small fires or deceptively quiet areas of large fires.**

**WATCHOUT SITUATION # 14  
WEATHER IS GETTING HOTTER AND DRIER**

**Air Operations:** Expect possible areas of smoke especially on the west and north side of the fire.

**SAFETY:**

**WINDS** – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS** - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **Live Trees/SNAGS** – are falling in all Divisions – will be influenced by Thunderstorm outflow winds. **FUELS:** Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor, re-burn is still possible. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. 100 and 1000 hour fuels are still below average in moisture content. Stay focused, and put LCES in place before starting operations. *Energy Release Component (ERC) is running near average for this time of year.*

## HEALTH AND SAFETY MESSAGE

*SAFETY* starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT: Honey Prairie Fire

DATE: 8/6/11

TIME: 0800

### Major Hazards and Risks:

**In Briefing  
Communications  
Heat / Hydration  
Common Denominator for Tragedy Fires**

**In Briefing** – All in coming personal should receive a complete briefing on current situation, mission execution, communications, service /support and risk management. Reference IRPG.

**Communications** – As several resources are timing out and many other positions are transitioning. Ensure good in briefings and communicate hazards/watchouts. Even if you have been assigned to the fire before, expect changes and continuously build your situational awareness.

**Heat / Hydration** – Higher temperatures will promote dehydration; drink WATER continuously prior to, during and after shift to ensure hydration. Remember that carbonated drinks can contribute to dehydration as well, so more water intake is required to stay properly hydrated if you don't avoid them

**Common Denominators of Fire Behavior on Tragedy Fires** – (1) on relatively small fires or deceptively quiet areas of large fires, (2), In relatively light fuels (3) Unexpected shifts in wind direction or wind speed, (4) When fire responds to topographic conditions and runs uphill.

### Remember, Stupid Hurts...

### Look Up, Look Down, Look Around

- \***Look Up:** Check the sky for any weather changes such as building or approaching thunderstorms, wind shifts or increasing in speed. Watch for air operations and water drops. Look for snags.
- \***Look Down:** Watch your footing. Keep an eye out for snakes, bees and observe fine fuels on the ground.
- \* **Look Around** Check fuel loading in the area, general terrain, current fire behavior and ladder fuels. Keep an eye on fellow firefighters for signs of heat stress and smoke inhalation.

**Incident Safety Officers: Tom Lail and Shane Barrow**

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.
