**FIRE BEHAVIOR FORECAST**

<b>Fire: Honey Prairie Complex</b>	<b>Unit: GA-OKR-000001</b>	<b>Prediction for Day Shift</b>
<b>Forecast #100 Issued: 08/15/2011 1830 hrs</b>	<b>Signed: Anthony Petellat</b>	<b>Shift Date: Tuesday 08/16/2011</b>

**GENERAL FIRE BEHAVIOR**

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

**Indicators/Threshold for Increased Fire Activity**

- **Relative humidity dropping below 45%**
- Winds above 10 mph
- **Heavy fuel loadings**
- **Fine dead fuel moisture 8% or less**
- Dispersion above 70
- **\* Items in BOLD are predicted to occur today\***

**SPECIFIC FIRE BEHAVIOR**

- Interior smoldering and some flare ups are possible, especially if winds increase.
- Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths.
- **LIGHTNING ACTIVITY LEVEL 1**

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
<b>Winds at 2 - 4 mph</b>				
Shrub Fuels – SH4	1 -2 ch/hr	1 - 2 feet	0 – 1/10 MILE	67%
Heavy Southern Rough- SH8	2 - 4 ch/hr	3 -4 feet	0 – 1/10 MILE	67%
Timber Litter-Reburn TL8	1 - 2 ch/hr	1 - 2 feet	0 – 1/10 MILE	67%
Small Pine Plantation w/grasses GR5	2 - 4 ch/hr	2 -3 feet	0 – 1/10 MILE	67%

**One hour fine dead fuel moisture is at 5% for TUESDAY:** Areas remain dry and burning continues. 1,000 hour fuels are drier than normal for this time of year. There is re-burn potential; mainly on the west side of the fire due to the amount of needle cast, fallen trees and scorched shrubs. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. **In areas where fuels have been herbicided, expect quick ignitions, extreme heat, quicker rates-of-spread, and possible group tree torching potentially producing spotting problems.**

**NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.**

**All Divisions:**

*The fire continues a slow spread through the thick bays and muck soils. Roots and fallen trees are protecting heat sources allowing the fire to burn organic soils from the bottom up. Be heads-up for falling trees.*

**Air Operations:** Expect possible areas of smoke.

**SAFETY:**

**WINDS –** Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS -** these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **Live Trees/SNAGS – are falling in all Divisions – will be influenced by Thunderstorm outflow winds.** **FUELS:** Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor, re-burn is still possible. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. 100 and 1000 hour fuels are still below average in moisture content. Stay focused, and put LCES in place before starting operations. *Energy Release Component (ERC) is running near average for this time of year.*

## Hazards and Risk

HEAT INDEX / DEHYDRATION

DRIVING HAZARDS

COMPLACENCY

COMMUNICATIONS

## Mitigations

The heat index is again going to be over 100 degrees again today. Drink water frequently to stay hydrated take frequent breaks. **Drink water before you get thirsty** and limit your Gatorade consumption. Keep an eye on your physical condition and **everybody around you**. Some heat disorder/dehydration symptoms to look for:

Heavy Sweating \* Extreme Weakness \* Nausea \* Muscle cramps \* Elevated Body Temperature  
Dizziness \* Confusion \* Clammy \* Pale Complexion \* Fast and Shallow Breathing

Wearing your seat belt will save your life. Drive at the posted speed limit or less and always use your headlights. If you don't need to go into boggy areas stay clear and limit the risk. Always use **L.C.E.S** it's not just for the fire.

Seeing and doing the same things every day leads to complacency. Stay alert to all the hazards, Conduct tailgate safety briefings, communicate hazards to others and your supervisor.

Use clear text, never use slang, limit the use of acronyms and keep transmissions on the radio short and to the point.

*The more routine decisions you make prior to a fire the more time you will have to make critical decisions during the fire.*

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.

## Honey Prairie Fire Incident Information

Here are some key point that we like to make when discussing this fire with the public.

1. Public and firefighter safety remains the top priority for this incident.
2. Past experience has shown that conventional fire suppression tactics do not work well inside the swamp. Humans have never been successful in controlling fires within the swamp; only “mother nature” has done this. Attempting suppression within the swamp is ineffective, costly, wastes firefighting resources and needlessly endangers firefighter safety.
3. Fire on the refuge is usually fought by reinforcing firelines along the Swamps Edge Break, including areas of private land, to keep the fire contained within the swamp.
4. Homeowners and other land owners can minimize the potential for damage to their homes by creating defensible space through firewise landscaping, thinning, etc..
5. Fire enhances the health of the Okefenokee ecosystem and is a force of nature that sustains the diversity and richness of a wide variety of species that makes the Okefenokee a world-famous ecosystem and natural area.
