FIRE BEHAVIOR FORECAST

Fire: Honey Prairie Complex	Unit: GA-OKR-000001	Prediction for Day Shift
Forecast #83 Issued: 07/29/2011 1830 hrs	Signed: Keith Mousel	Shift Date: Saturday 07/30/2011

GENERAL FIRE BEHAVIOR

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

Indicators/Threshold for Increased Fire Activity

- Relative humidity dropping below 45%
- **Fine dead fuel moisture 8% or less**
- Winds above 10 mph
- Dispersion above 70
- **Heavy fuel loadings**
- *** Items in BOLD are predicted to occur today***

SPECIFIC FIRE BEHAVIOR

- Fire behavior should be slow to develop today.
- Interior smoldering and some flare ups are possible, especially if winds increase.
- Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths. LAL 0

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 3 - 10 G 16 mph				
Shrub Fuels – SH4	1 - 4 ch/hr	1 - 2 feet	1/10 – 2/10 mile	45%
Heavy Southern Rough- SH8	1 – 9 ch/hr	3 -6 feet	1/10 – 2/10 mile	45%
Timber Litter-Reburn TL8	1 – 3 ch/hr	1 - 3 feet	1/10 -2/10 mile	45%
Small Pine Plantation w/grasses GR5	1 – 8 ch/hr	1 - 3 feet	1/10 – 2/10 mile	45%

One hour fine dead fuel moisture is at 7% for Saturday. Moisture from rain has reduced the fire threat, HOWEVER some areas remain dry and burning continues. 1,000 hour fuels are drier than normal for this time of year. There is re-burn potential; mainly on the west side of the fire due to the amount of needle cast, fallen trees and scorched shrubs. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. **In areas where fuels have been herbicided, expect quick ignitions, extreme heat, quicker rates-of-spread, and possible group tree torching potentially producing spotting problems.**

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

All Divisions:

The fire continues a slow spread through the thick bays and muck soils. Roots and fallen trees are protecting heat sources allowing the fire to burn organic soils from the bottom up. Be heads-up for falling trees. 10% chance of rain.

Water continues to rise within the borders of the Okefenokee at its low point water was measured at 117' currently the level is 119' approximately .25' below the low of the 2007 Bugaboo fire. Things are improving but diligence is needed. Remember that most accidents occur on small fires or deceptively quiet areas of large fires.

Air Operations: Expect possible areas of heavy smoke especially on the east and north side of the fire.

SAFETY:

WINDS – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS** - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **Live Trees/SNAGS – are falling in all Divisions – will be influenced by Thunderstorm outflow winds.** **FUELS:** Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor re-burn is still possible. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. Stay focused, and put LCES in place before starting operations. *Energy Release Component (ERC) is running near average for this time of year.*
